Yahoo Group Archive: ArizonaScanner (2007 — 2012)

Yahoo Group summary: Arizona public safety radio information

These Yahoo Groups messages were archived in WARC format by ArchiveTeam in 2016. This PDF was generated by Digital Library of Amateur Radio & Communications from the WARC files in 2026.

Date span: 2007-01-01 through 2012-12-30

Source WARC: arizonascanner.w7vZEzO.warc.gz

Source item: https://archive.org/details/yahoo-groups-2016-06-15T09-36-34Z-7a947c

Messages included in this PDF: 4688

Message records with no body available in the source archive: 1

Messages omitted as spam from this PDF: 1

Yahoo replaced the domain portions of email addresses with @... in the archived messages. Characters lost in Yahoo's archived text appear as ?.

Messages are presented in ascending Yahoo message-ID order. Gaps indicate records absent from the source WARC or messages omitted from this PDF as spam.

13262. Pinal County

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-01-01 05:53:30 UTC
From: liferocksj
Topic: 12886 Message: 13262

I often hear pinal county areas for PCSO named "edward", "king", "baker"... Does anyone know where these boundaries are or have a map of them all? Also i'm having a hard time finding a good list of the frequencies PCSO uses and the corresponding channel... Has anyone figured all this out?

The Southwest Frequency Directory 9th Edition (www.ArizonaScanner.com) has such a list. Cross-referencing those you mentioned:

"Edward" covers Stanfield, Hidden Valley, Maricopa, Mobile and Saddleback Farms areas

"King" covers Queen Creek and Johnson Ranch

"Baker" covers Pinal Air Park, Red Rock, Picacho, Eloy, Arizona City, Silverbell and Friendly Corners.

Dan

Phoenix has long been P25 digital trunked. Glendale is as well. I
think Scottsdale uses the Maricopa County system, which isn't a pure
P25 digital trunked system (but it does use P25 digital audio). Mesa
and Gilbert are both pure P25 digital trunked systems as well.

John,

Phoenix, Mesa, Mcso analog and digital, Elmirage, Avondale I might have missed 1or 2 all use trunking and are digital, there are several scanners that will follow theses systems, RS Pro-96 and Pro-2096, Uniden BC296D, BC796D, BCD396T and BCD996T, the 396 and the 996 will also trunk the 700mhz band. The Uniden models also will listen to WBFM, and Edacs, Ltr and Mil-Air; if you want to look at used you should be able to find something for under $400.00 dollars.

Mike

Last I heard they aren't going digital. However, they do use a few
talkgroups for special investigations stuff that are digital.

Looks as though I will be getting the 996T (or if I need to save a few bucks, the 2096). I am mainly interested in Fire, DPS, and Police; besides wireless communications in the performing arts. Any reason I should avoid, or get, either of the above models? I am in central Maricopa county, and use an outdoor discone antenna.

Thanks,
John

John,

Fire, Dps and some police still use conventional analog, Tempe, Scottsdale
and a few others still use analog trunking.

John,

The cheapest I have found a new 996 or 396 is through Bearcat1.com $499.00 shipped with Money order, cash or check. Also check radioreference.com there is a 796 and a 996 for sale there right now.

Mike

13279. Re: [ArizonaScanner.com] Digital Trunking in Maricopa County

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-01-02 00:08:15 UTC
From: Jon M. Hanson
Topic: 13266 Message: 13279

I have a 996 and like it a lot (I also have the 396 hand-held version). The memory layout of the Uniden scanners makes a lot more sense than the older banks convention that Radio Shack's scanners still use. With Uniden's scanners the programming software is free and the programming cable comes with it. That's not the case with the Radio Shack scanners.

13280. BCD996T file released!

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-01-02 01:30:36 UTC
From: Michael Hamann
Topic: 13280 Message: 13280

Hello again everyone,

We have uploaded the file to the Incident Command Page website and it is ready for your downloading! Simply point your browser to www.incidentcommandpage.com and check the link on the left sidebar.

Currently, both Butel and UASD programming software formats are available.

Of course, frequencies found in the file are courtesy of the Southwest Frequency Directory and Radio Reference.

Thank you for your support!

Michael Hamann // ICP737

13286. PHX freqs

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-01-04 21:40:03 UTC
From: John
Topic: 13286 Message: 13286

I just received my Scannerstuff Directory. It is a great book, but it has loads of information. That is a good thing but also causes my head to spin ;) Does some one have a spreadsheet of their favorite freqs (non-apo25) that you would want to share with me. Between the adjustment to dynamic memory and trunked systems, I feel there is a huge learning curve.

Since I don't yet have a digital scanner (or even a trunking one for that matter), all I can listen to are the analog conventional channels. You can look through the SWFD for the exact frequencies, but here's some agencies:

Fire:
Phoenix

Rural-Metro

Mesa (Mesa is on their digital trunked system, but simulcasts to VHF for mutual-aid purposes.)

Wittmann

Law Enforcement:
DPS Metro West, Metro Central, Metro East, TAC West, TAC East, CID, Statewide

MCSO Search-8 and Parks VHF (Parks VHF seems to be used exclusively at Lake Pleasant by Parks and Trails and possibly Lake Patrol deputies)

Sun City Sheriff's Posse (800MHz analog conventional.)

Peoria PD (UHF)

Avondale PD (maybe still UHF, or have they switched to the county system?)

Goodyear PD (800MHz analog conventional)

Tolleson PD (800MHz analog conventional)

Apache Junction PD (VHF)

Medical:
Southwest Ambulance

PMT Ambulance

Air Evac Helicopters

Where you live, and whether you have an outside antenna or not may determine what all you can hear. I'm in Peoria without an outside antenna, so I can't hear Mesa FD, or AJPD. Most of my monitoring is Peoria PD, Phoenix FD chs. 1 and 6, Southwest Ambulance ch. 12, and the helicopter channels of 123.025 and 123.550.

John
Peoria

Does the 996 seem to receive Phx PD 800 mhz
frequencies better than the 396 ?

13289. F.B.I. Frequency

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-01-05 23:20:13 UTC
From: John Timmons
Topic: 13289 Message: 13289

Perhaps two months ago, someone listed some federal law enforcement frequencies used in the metro Phoenix area including one for the F.B.I., 167.3375. I want to thank whomever shared this frequency since after years of seeking a good, working frequency for the Bureau, I finally have one. I am receiving it loud and clear here in Maricopa.

If anyone knows of any other active F.B.I. frequencies, I would be be very pleased to know about them, as well.

Thanks, again!

My scanner puts it in as 167.340 will I still be able to pick this channel up ?

By any chance does your scanner tell you if they're using a tone on 167.3375? The Southwest Frequency Directory has that frequency and it lists a tone of 167.9 Hz with it and I have that tone programmed into my scanner. I don't think I've ever heard any activity on that frequency so I'm wondering if I have the wrong tone.
Here are the other FBI frequencies as listed in the Southwest Frequency Directory: 167.4875, 167.2375, 167.5625, 163.9375, 167.7125, 167.2625, 167.3375 (167.9 Hz tone), 167.3625 (167.9 Hz tone), 412.45, 412.575, 414.5, 416.325, 416.775, 419.225, and 414.45. I'm not sure if I've ever head anything on any of these frequencies but I mostly listen to the scanner in the background while I'm doing something else so I might miss what channel it's currently on.

wrote:
>
The FD Maricopa is currently being dispatched by Southwest
Ambulance on the Pinal County frequency (CH 14) of 460.950. The
original department simplex frequencies of 154.220 and 150.805 are
now only used as tactical frequencies when the need arises. As the
department continues to expand, FD Maricopa will have their own
dispatch center for both fire and police.

In regard to the rapidly developing police department, according
to the local newspapers, the MPD will have brand new Dodge Chargers
for patrol cruisers when the department officially begins operations
on July 1.

I should probably add these as monitoring targets as well:

Arizona Department of Corrections (TAC channels are repeatered)

Arizona Department of Juvenile Corrections

Arizona State Capitol Police

Arizona State University Police

Arizona State Game and Fish Department

Arizona State Land Department

Ft. McDowell Indian Fire, and Tribal Police

Salt River Pima/Maricopa Indian Fire and Medics (PD is encrypted)

On the far outskirts you may be able to monitor:

Harquahala Valley Fire and Tonopah Valley Fire (far west, out I-10)

Circle City-Morristown Fire and Wickenburg Fire (up Grand Ave/U.S. 60;
WPD may be encrypted IIRC)

Any corrections to this list, or my previous one, are welcome, of
course.

Yes you will be able to receive .3375 on .34
The passband on a scanner is so wide, no problem.

Robert

Harquahala and Tonopah DO NOT use Blue 12 unless Buckeye Valley is assisting them. They are not part of Phoenix Regional Dispatch. Tonopah is dispatched by Buckeye City PD and Tonopah answers their own emergency calls on a radio-telephone or cellphone.

When anyone goes to the repeater output and transmit simplex, whether it's the Buckeye repeater, or the Chandler one, Alarm cannot hear them. If they have an emergency and they're on simplex, they're screwed. It is a safety issue, but one that nobody is worried about for some reason.

Do you happen to know where the new stations are going to be located? I know one is going to be out at Tortola (E Honeycutt) and another down by the KB Homes development.

We need to get out there and photo their equipment.

Dave (soon to be moving to Maricopa)

13306. Re: Pro-2005

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-01-09 01:44:04 UTC
From: John
Topic: 13304 Message: 13306

I use a 2006 (and a 2026) to scan Air. The home scanner (2006) is connected to a discone, and the mobile unit (2026) is using a VHF/UHF mag mount antenna. The 2006 is better given the same distance to the source, but the 2026 shines when I am within sight of a runway. I have not done any mods to either unit, so I can not answer the other question.

In a message dated 1/8/2007 1:27:05 PM US Mountain Standard Time,
ArizonaScanner@yahoogroups.com writes:

When anyone goes to the repeater output and transmit simplex, whether it's
the Buckeye repeater, or the Chandler one, Alarm cannot hear them. If they
have an emergency and they're on simplex, they're screwed. It is a safety
issue, but one that nobody is worried about for some reason

not on blue 12...the repeater output is monitored by alarm, not the input ,
alarm will hear you on simplex out here if your on a mobile. the safety factor
in simplex is that the local command will hear you on simplex.. the dept in
question will be safer if they adopt the bvfd protocol of all ff use simplex,
and the command use the repeater when on a call.

and harq and tonopah are on the repeater all the time , even if the call
doesnt involve bvfd. phx has an unoffical policy of comuncating with those 2
depts, depite no contract...as we have tried to remove them from the channel
unless there on a mutual call

There are three chiefs assigned to the Alarm Room. They replaced the captains years ago. They work A-B-C shifts (24 hours on). We also have a Chief who oversees the entire section. I have no idea who they would be referring to on the radio. The Alarm Room chiefs don't normally have a radio with them, and the big chief never does (maybe he has one in his car). I know we're always telling units to call the Alarm Room chief, but never had to tell the chief to "respond" to anything. They do have a bunk room in the building next to ours, so maybe they were being told to respond to the Alarm Room. They are not responders and do not leave the compound.

13310. Antenna

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-01-10 20:46:17 UTC
From: John
Topic: 9993 Message: 13310

I have been searching for a mobile antenna, and have failed to find anything that fits my needs. It has to have a 3/8 - 24 mount, be 3 - 6' long, and work with VHF/ UHF/ 800 MHz with better than unity gain. The 11 year old antenna currently in use is getting old and showing signs of abuse. It mounts on the passenger side of the rear bumper on a pickup truck.

TIA,
John

And is the 'old' antenna exactly what you are describing?
What make/model?

Finding any non-HF, multi-band antennas [especially including 800 MHz]
on that style mount is doubtful.

Walter

Hmm thats weird, I know i've heard at least 3 times in the last month. Most recently overnight there was some sort of 2-1 hazardous assignment. It was then bumped up to a 1st alarm hazmat box and on the dispatch one of the units said was the Alarm Room Chief. Thats why I figured he responds to the scene.

From: Joe
Topic: 13313 Message: 13313

New to scanning. Love the 396.

Is there a way to listen to alarm calls for the Phoenix FD that only activate the station (42) near me? I hear a tone before the call, but always sounds like the same one.

Thanks for a great group.

Joe

OK, now I know what you're talking about. Some dispatchers read every little thing that passes in front of their eyes. No common sense or discretion on their part. On certain assignments, the Alarm Room Chief gets paged. The easiest way to do that is to create a "DUMMY" unit on the CAD system that is suggested for those types of calls. It's not supposed to be verbalized on the dispatches, but guess what? BTW, I'm not calling the Alarm Room Chiefs dummies, either...

It'd be cool if we could use the fire-tone-out feature of the Uniden scanners to monitor only specific stations, but I don't think there's enough two-tone pager combinations to assign one to every station and BC/DC in the system, there's just too many of them. (I believe a couple of people figured out the various combinations for most if not all the BC's and DC's, and the few stations, [Buckeye City, Buckeye Valley and Daisy Mtn.], that do use them.)

The only way you could do it, is if it were technically (and legally) feasible to tap into whichever method is used by the alarm room to set off the stations signalling package: either a dedicated landline, or via the 800MHz MDC radio system. (I'm not sure which one is used, myself.) But it's not legal to do either.

Over time, your ears can be trained to only pick out those units (Sta. 41) or those calls (structure fires, 3+1 medical, haz-mat, etc) that you're most interested in.

It'd be cool if we could use the fire-tone-out feature of the Uniden scanners to monitor only specific stations, but I don't think there's enough two-tone pager combinations to assign one to every station and BC/DC and certain other units in the system, there's just too many of them. So, most of the time, you'll only hear a single-tone prior to the dispatch. (I believe a couple of people figured out the various combinations for most if not all the BC's and DC's, and the few stations, [Buckeye City, Buckeye Valley and Daisy Mtn.], that do use them.)

The only way you could do it, is if it were technically (and legally) feasible to tap into whichever method is used by the alarm room to set off the stations signalling package: either a dedicated landline, or via the 800MHz MDC radio system. (I'm not sure which one is used, myself.) But it's not legal to do either.

Daisy Mountain has one set of tones for ALL pagers. We don't activate separate tones for separate stations/units. They all get the same page. Buckeye Valley and Mesa are the only specific units being paged by Phoenix RDC.

The station packages are opened by data signals sent from the mountain tops. I don't know how all that works, and it's not worth the work to figure it out, and then to program a computer to decipher it and then control my radio. I prefer to just listen a little closer.

Look for the Triune antenna. You will also need a triplexer. The antenna works very well for VHF/UHF/800

NOBODY has given one that has a 3/8-24 mount.

All the ones mentioned are NMO mounts.

Like I said, doubtful that one exists thats VHF/UHF[800] on a stud mount.

NMO's? More than a double handful.

Hey, maybe you should look at the Glendale WestFest [hamfest].
This Saturday at Glendale Community College, 59th Ave and Olive [Dunlap], 0600-1400, $2.

the station data stream for dispatch is on 800 mhz, and Ive seen the radio techs use a laptop hooked to a Darcom radio and it brings up the same data that the station gets on the print out. there are data bits in the stream that turn on tones and open speakers , ect. and the alert tone heard prior to dispatch is always the same one, but is preceded by a 2 tone sequential tone if is needed. see this _http://www.batlabs.com/qcii.html_ (http://www.batlabs.com/qcii.html) for more info. buckeye/buckeye valley and tonopah (on their
own channel) use group 6 tones (group 6, tones 1 and 2, for example)

Buckeye Valley and Daisy Mountain are the only Fire Departments/Districts on the Phoenix RDC that require paging prior to routine dispatch. ALL cities have staff pagers that are activated for various reasons, but not on every call (except cities that have BC's that respond from home, and then we page ONLY the BC).

The station package that activates the lights and radios generates its own dispatch tone (not a pager tone). Alarm also activates a dispatch tone. If you're in a station, it's likely you'll hear both, one after the other. The station package gets the dispatch information and sends it to the station computer terminal and printer, so a hard copy is also available. Simultaneously, the dispatch information goes to the MCT or MDT. To the best of my knowledge, there is no way to tap into either system to intercept the data transmissions. If the station package doesn't acknowledge receipt of the data packets, Channel 1 gets notification that the station may not have gotten the call.

I believe all of this data stuff happens on 800MHz. I believe most or all stations have directional antennas pointed at the mountain top that sends the data to their station. Stations in South Phoenix point towards North Mountain, and Central Phoenix points to South Mountain. I believe the computer system knows which mountain top to send the data for each specific station. I'm not sure where all the data transmitters are for this system, but I'm told they're low power, hence the need for directional antennas.

Ed

It's Back !

Tucson Electric Power Company is running a P25 system again. There are also additional towers being referenced in the data stream....

System ID: 1E5
WACN: BEE00

Tower 101:
851.00625mhz - Control
857.35000mhz - Control - Currently active
858.30000mhz - Control
858.35000mhz - Control

Tower 102:
Referenced but no frequency ID'd as of yet in the stream

Tower 103:
857.40mhz - Control - First heard back in Sep 2006
858.30mhz - Control - First heard back in Sep 2006
859.30mhz - Voice Channel

No voice activity as of yet though :<

Hello fellow scanner pals. I have a Pro 96. I have programmed it every way possible and it just wont pick up any phoenix pd. I get sherrif, surprise all the west valley stuff, and scottsdale also. I programmed in Simulcast a-b-c tried them every way all i get is an occasional digital garbled sound that is close to a bad nextel radio signal. can anyone clue me into why this is? I have even tried driving all over the valley in different places. Radio shack says there radios work mint no interference. I tried changing antennas and even using a car antenna on the roof, no luck. I know the digital board is good or I could not recieve sherrif. Any help would be awsome, even better if someone has a saved file from win96 that I could see, maybe i have a function programmed in wrong?

Thanks!!

One possibility would be that your scanner may not have
the latest CPU/DSP versions. One of these upgrades,
(I believe it was DSP 1.2 ?) improved the digital issues some
areas (Detroit/Phx, others?) were experiencing. It's been
a while since I've owned a 96. If I remember correctly,
you turn the scanner on and press the # 3 during the
welcome message to see which versions you currently
have. Hopefully you'll see:

CPU: F1.4
DSP-APP: F1.2
DSP-VOC: F1.0

Knowing where in the valley you are can help as well. If you have a Win96 file for your current setup you could upload it here and I am sure several people would be willing to look at it and tell you if anything looks off.

TEP has cut over to the new system this morning. The old analog system is no more.

They're still working the cutover though....

Only the Security and one of the Map Room talkgroups is on the new system, but I suspect that they're going to change from the current TG's.

Currently,

TG 3 is Map Room 2
TG 19 is Security

Contol frequency is currently 858.35mhz.

C.H.,

You'll need the PC to scanner interface cable, available at Radio Shack or other scanner specialty companies. Then you would go to Radio Shacks website and follow their links and instructions on their download page. If I'm not mistaken, Radio Shack will even do the upgrades for you in-store at no charge?

13339. TEP P25 TRS System is Officially Cut Over

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-01-15 17:43:26 UTC
From: FLANO 2
Topic: 13339 Message: 13339

Hello All,

The Tucson Electric Power (TEP) Power Company is now using thir new P25 Trunked Radio System. Details about the frequencies and talk groups will be updated on Radio Reference and may be found at this link http://www.radioreference.com/modules.php?name=RR&sid=4924

The cutover went rather smoothly. Kudos to Motorola. This system conversion went far easier than some others that I've noticed.

A total of 41 talk groups have been noted active on this system. I have ID'd about 1/4 of them. Anyone wishing to contribute to ID'ing these talk groups can either submit an update on RadioReference or to me. I am now one of the Arizona Database Administrators so I can update the system with your help.

Thanks,
John

Technically is an "altered level of consciousness" meaning someone who's not with us completely or who was, at one time, unconscious. Altered State of Consciousness sounds like something Mesa FD would say.

I've got the Mesa system programmed into my scanner because I'm in
Gilbert. I have heard numerous times fire calls being dispatched in
Apache Junction.

Don't forget 418.950 on So.Mtn I copy the same traffic with aircraft assistance, also remember that any aircraft must have clearance from the controling air traffic control like the class "B" Skyharbor.

Subject: [ArizonaScanner.com] HAMateur UHF and VHF in the Valley

Looking to get back on the air on 2m and 440, what are the popular and
active open repeaters in the area. I have the ARRL list but would like
a headstart.

Does anyone know anyone that works at azcentral.com 12 news? There scanners on there are up and running however theres no audio feeding thru. Been like that for about 3 weeks. Wasting there own bandwidth for nothing. I contacted customer support twice and got a response back that it will be forwarded to the departments president but so far nothing fixed. In the past customer support has been fairly prompt in fixing the problem but this time it doesn't appear to be working. I'm sure its an easy audio turn up or plug the cord back in problem but my e-mails to customer support seem to be doing no good. Anybody here know anyone that works there or anyone on here work there?

Jason

Well, that didn work too well - don't know why you just can't paste a URL...

You can find the PDF document at:

http://groups.yahoo.com/group/AirCommSouthwest

Join the groun and peruse the files section - you can't miss it.

13371. Any Green Valley, AZ frequencies?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-01-24 14:20:46 UTC
From: nkosbrink
Topic: 13371 Message: 13371

Hello all,

We've just moved to Green Valley, Arizona and I'm in the process of setting up my Pro 97 scanner for this new area. Any suggestions for police, fire, government, border patrol, aircraft, railroad, amateur radio, etc. that I ought to have? Can I receive anything from the close-by Desert Diamond casino?

I've downloaded frequencies from Radio Reference and have Sahuarita police, Green Valley Fire District and some others as well as the Pima County Public Safety LTR trunking system (I seem to be receiving the Elephant Head site).

Thanks in advance.

13374. Any P96 files for the tucson area?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-01-28 18:32:28 UTC
From: ripperq2
Topic: 13374 Message: 13374

Hey all I am having a time again with my pro 96 and making a updated p96 file and was wondering if any of you had any p96 files that you might be able to post or send me so I can restart up my scanning. I live in Tucson and listen to pretty much anything but I do listen to police and fire more than anything so any help would be much appreciated. Thanks all and see you guys soon!I also am not really sure still how to use the settings such as FM,CT..etc and that is why i'm asking for help.

The bulk of the Valley has gone digital, but not everyone is. You
will probably want to acquire one of the Uniden or Radio Shack
digital scanners anyway, seeing as most of the biggest monitoring
targets have all gone digital.

Since I don't yet have a digital scanner (or even a trunking one for
that matter), all I can listen to are the analog conventional
channels. You can look through the Southwest Frequency Directory for
the exact frequencies, but here's some agencies:

Fire:
Phoenix (Phoenix, Glendale, Peoria, Sun City-Youngtown, Surprise, Sun
City West, Laveen, Tolleson, Avondale, Goodyear, Buckeye, Buckeye
Valley, Gila Bend rescues, Daisy Mtn., Scottsdale, Tempe, Guadalupe,
Chandler, Sun Lakes.)

Mesa-Gilbert-Apache Junction (They're on Mesa's digital trunked
system, but simulcasts to VHF for mutual-aid purposes.)

Salt River Pima/Maricopa Indian Community (Fire and Medics)

Ft. McDowell Yavapai Apache Indian Community

Harquahala Valley, and Tonopah Valley (Far west, out I-10)

Wittmann, Circle City-Morristown, and Wickenburg (Up Grand Ave/U.S.
60.)

Rural-Metro (Anywhere not mentioned above.)

Arizona State Land Department.

Law Enforcement:
DPS Metro West, Metro Central, Metro East, TAC West, TAC East, CID,
and Statewide channels.

Arizona Department of Corrections (TAC channels are repeatered).

Arizona Department of Juvenile Corrections.

Arizona State Capitol Police.

Arizona State University Police.

Arizona State Game and Fish Department.

MCSO Search-8 and Parks VHF. (Parks VHF seems to be used exclusively at Lake Pleasant by Parks and Trails deputies and possibly Lake Patrol deputies.)

Sun City Sheriff's Posse. (800MHz analog conventional.)

Peoria PD. (UHF)

Avondale PD. (May still be UHF, or have they switched to the county system?)

Goodyear PD. (800MHz analog conventional)

Tolleson PD. (800MHz analog conventional)

Apache Junction PD. (VHF)

Ft. McDowell Tribal Police. (UHF Goverment)

Medical:
Southwest Ambulance.

PMT Ambulance.

Air Evac Helicopters.

Where you live, and whether you have an outside antenna or not may determine what all you can hear. I'm in Peoria without an outside antenna, so I can't hear Mesa FD, or AJPD for example. Most of my monitoring is Peoria PD, Phoenix FD chs. 1 and 6, Southwest Ambulance ch. 12, and the helicopter channels of 123.025 and 123.550.

John
Peoria

Thanks.
I have a hend held analog trunked scanner and a table top non trunked scanner. Is phoenix PD/FD digital? I will need to find my hand held anyway. Lost it the move from Gilbert to Phoenix. I bought it when I move from Phx to Gilbert when I got married. My old table top did not pick up anything. I found out Gilbert was trunked. When we moved to Phoenix they were still testing the digital trunk system. I had not turned the tt on for a while and there is nothing there. I am guessing they switched to the digital system.

13379. REACT trucks

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-01-30 16:32:24 UTC
From: Jon M. Hanson
Topic: 13379 Message: 13379

This morning as I was trying to get to my vanpool pick-up spot I found out that there was an accident at the intersection I was trying to get to. I'm guessing it was a fatal accident since every road to that intersection was closed. I saw a couple of trucks marked "REACT" that I'm assuming are in charge of setting up the barricades in situations like these.
Does anyone know if these REACT trucks are a part of the state, county, or the cities in which they respond? Are they on their own frequencies/talkgroups or are they dispatched through normal police/sheriff channels?

Thought they were state IIRC?
They are found on the ADOT Motorola trunked system last time I looked.

But I could be wrong...

I know that ADOT has something called ALERT (I don't know what it stands for)
that I've seen on a trunked system that may do something similar.

Guess I meant they operate within maricopa County (possibly others?) and do in fact come under ADOT.

13384. RE: [ArizonaScanner.com] REACT trucks

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-01-30 22:34:01 UTC
From: Danz, Dan
Topic: 13380 Message: 13384

REACT is the Maricopa County (MCDOT) rapid reaction team for barricades/road closures. Great bunch of folks who are really quick to respond when we need to shutdown a roadway ... we actually had them gowng at the same time to 3 widely separated locations in the county on Sunday night.

<http://www.apwa.net/Publications/Reporter/ReporterOnline/index.asp?DISPLAY=ISSUE&ISSUE_DATE=092004&ARTICLE_NUMBER=885>

We usually activate them via pager and talk to them via cell phone, but I wouldn't be surprised to hear them on the MCDOT talkgroups of the Maricopa county radio network.

ALERT is a similar facility for ADOT ... and we usually let DPS get them out, because it's usually DPS incidents that they're needed on.

Phoenix PD is digital trunked. Much of it is encrypted, but there are
still several un-encrypted patrol talkgroups worth monitoring if you
purchase one of the digital scanners.

Phoenix FD's Regional Alarm Center, as mentioned previously, is still
analog conventional. They won't be switching for a couple of years
yet, it appears.

From: walter
Topic: 13387 Message: 13387

The National Public Safety Telecommunications Council will be having a meeting in Florida on Monday, February 12th, regarding standardization of interoperability channel nomenclature [naming].

The agenda and conference documents are all listed on their website:

http://www.npstc.org/meetings.jsp

along with a call in number to listen to the proceedings.

Anyone who wants to research in-depth about the philosophy of current public safety radio might take a look at some of the documents from previous meetings/conferences.

Walter

13388. Interop channel naming and freqs [correction]

Very likely they will adopt what's been discussed in the past, 700mhz interop 7CALL, 7TAC1, 7TAC2 etc., 800mhz 8CALL, 8TAC1, etc., VHF= VCALL, VTAC1, VTAC2 and UCALL, UTAC1, UTAC2 etc for UHF. Good point btw, they really do need to do this, National 1, MA 1, USA 1 all these names and more are used for the same channels and that doesn't work.

Date: 2007-02-01 18:50:36 UTC
From: walter
Topic: 13390 Message: 13390

Not quite.
The proposal begin the name with a 'band identifier', ie. 1=HiBand VHF, 3=LowBand, 4=UHF, 8=800MHz, 7=700MHz, and then a functional descriptor, ie. 'CAL' for calling channel, 'TAC' for working channel, 'LAW' for law enforcement only, 'FIR' for fire only.
An 'F' goes between the 'band identifier' and the 'descriptor' for Federal [NTIA] channels.
And no 'channel name' is more than 8 characters long.

You really should look at the documents on the website. A number of them are PDF's that anyone with a windows/mac machine can read with a free viewer [Acrobat Reader].

Walter

For Arizona hams

Edc

Please be advised that their is a Bill just introduced into the Arizona legislature HB 2595. This bill, reference title: amateur radio; operators; structures; accommodation, is an ACT Amending sections 9-462.01, 11-821, 28-2402 and 33-1808, Arizona Revised Statutes; Relating To Amateur Radio Accommodation.

This bill states as follows: NOTWITHSTANDING ANY PROVISION IN THE COMMUNITY DOCUMENTS, AN ASSOCIATION SHALL PROVIDE FOR REASONABLE HEIGHTS AND DIMENSIONS FOR ACCOMMODATION OF AMATEUR RADIO STATION EMERGENCY COMMUNICATIONS ANTENNAE AND STRUCTURES.

Please advise the Arizona membership of this bill, and encourage them to contact their State Represenatives and Senator and ask for their support of this most important step to assist us with our communication and Home Land Security.

The claim, better visibility by motorists to the black and white since it's a visual oddity. The truth, deep discounts from Ford for the 2 tone package that normally add big $$$ to the cost per vehicle.

If they want something that gets drivers attention, the led color scheme was researched heavily in the last few years and RED by day and BLUE & WHITE by night are the best attention grabbers according to the latest studies.

This stuff seems to happen every 10 or so years, I recall back in the early 70's fire departments were encouraged to run yellowish/green equipment as it was supposed to be easy to spot or stood out more than traditional fire engine red.

looks like they are in process of the 'reading' (whatever that is)

It is a hold over from statehood days and refers to the process of
reading the bill aloud to the the legislators. This was required due
to the fact many Reps at that time were illiterate. Bills were
required to be read I think three times before a vote could procede.
Explains why it takes so long to get anything done there. Too bad
this is not a requirement at the Federal level.

I think back then, before the useage of reflective striping/letters/numbers on fire apparatus, fire engine red looks black at night. Not very visible. So the lime yellow color, or white, or something similar did stand out better. Now, with reflective graphics being common, it's a moot point.

Here's an article on black-and-whites:
http://www.usatoday.com/news/nation/2005-10-13-police-black-white_x.htm

The better visibility of black-and-whites is actually a myth: "...Though many police departments cite visibility as a reason for the switch, an expert in emergency vehicles and color visibility says the black-and-white paint job isn't the optimum scheme.

"If you two-tone a vehicle, you camouflage it more than if you use a single car color," says Stephen Solomon, an Owego, N.Y., optometrist and member of New York state's Department of Motor Vehicles medical advisory board. "In a municipal setting, the background is straight lines, and when you two-tone a vehicle, you break down the ability to be able to see it in silhouette."

Solomon says the way to make cars more visible is to use lots of fluorescent, reflective tape. The best color is lime-yellow, frequently used on firetrucks, he says.

The National Safety Council, a non-profit organization that promotes health and safety, recommends to its business members that their fleet cars be painted in light colors with contrasting company logos

for better visibility..."

I really do like the LED light bars that Peoria and some other PD agencies, as well as some fire apparatus (like the BC's) are using now. They really get your attention, and they look cool to boot. I've also heard that red is best in daylight, and blue at night. And more fire apparatus are running a mix of red and blue, instead of just red these days too. Throw in white and amber, and you've got really good visibility.

We're going back to 2-1's on a trial basis. You'll also hear some other odd assignments, so don't sweat it too much. Things like an appliance fire or an AC Unit will get one engine and one ladder. This is on a trial basis only. There are some other subtle changes that I can't think of, but most will sound the same to the average listener.

Well everything sounds good so far, i'm not one to agree with sending 8 units to an appliance fire which usually turns out to be overheating with smoke issued. Then the "smaller" fire complaints which 95% of the time turn out to be a minor issue. Usually its kind of obvious on the 911 call that a fire is going to be a worker. 2-1 for the smaller issues and a 3-1 for what would sound like a good worker would be reasonable in my opinion. Especially in Phoenix region with the unbelievable construction and expanding response area. Runs resources thin.

Craig,

Surprise is Motorola type 11 analog trunking, fire is still analog, MCSO is mixed analog and digital, El Mirage is digital now using the MCSO digital system. There are a lot of available analog trunking scanners out there that will not cost you an arm and a leg. If you are interested in listening to LTR, Wide band FM, and Mil-Air then you might want to look at one of the Uniden scanners, their digitals are the BC785D mobile and BC285D both need a digital card purchased separately and will cover MCSO for now but once rebanding goes in to effect it will not track Motorola properly.

The BC796D mobile and the BC296D Handheld has the card built in and will track, Surprise, Mcso, Phoenix, Glendale, Mesa and anyone else in the valley using Apco 25 3600 mixed and 9600 baud as long it is not encrypted,

Uniden's newest digital is the BCD996T mobile and the BCD396T, good luck on you search.

Hi everyone,

So...the file has been out for a while now. If you downloaded it...what do you think so far? I'm about to release version 1.1 of the file to the ICP website but before I do...I'd like some feedback as to how its turned out.

Here are some things I have fixed for the new release:

-Changed system names to reflect the agency being scanned (i.e. "Simulcast A" is now "PhxPD-Sys A" and "Thompson Peak" is now "MCSO-Thompson")

-Cleaned up duplicate talkgroups and channels

-Deleted unscanable tribal stuff

-Added fire tone-outs

-Changed default view to "Display 2" so that the display shows the numeric frequency/talkgroup it is stopped on

Work is under way on the sister file to this release that will be compatible with the Pro-96/2096 scanners. I don't have a release date yet though...

Anything else?? Reply here or e-mail me personally. Thank you and happy scanning!

13424. Annual ACC Heritage Conference at DMAFB, AZ 1-4 March 2007

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-02-14 17:10:55 UTC
From: FLANO 2
Topic: 13424 Message: 13424

Hello all,

The dates have been formally announced in the Davis-Monthan AFB newspaper, Desert Airman, that the Annual Air Combat Command Heritage Conference will be held from 1 - 4 March.

This is a very cool event and is the training background needed before these pilots flying in the Heritage Aircraft Formations must qualify in, here at DMAFB. These pilots fly to the various airshows around the USA and Canada and normally perform in a 3 or 4 ship formation for you.

There are 8 demonstration teams and they'll be flying the following aircraft during the conference:

Modern Fighters: A-10, F-4, F-15, F-15E, F-16, and F-22
Vintage Fighters: F-86/Sabre, P-38/Lightning, P-47/Thunderbolt, P-51/Mustang

Look to the skies around DMAFB if you are in Tucson on these dates and don't be surprised to hear the sweet sounds of 3 Mustangs in formation buzzing overhead. Don't forget to have your camera with you, wherever you go. They do not just fly around the base. They'll fly up near the Catalina Mountains, providing an awesome backdrop, if you're lucky enough to catch it :)

In the past, they've used the following frequencies at airshows and around DMAFB:

118.50000 - DMAFB Tower
127.15000
136.57500
136.67500
253.50000 - DMAFB Tower
283.70000
305.40000 - A-10 (Discrete)
376.02500 - F-15 (Discrete)
384.55000 - F-15/F-16 (Discrete)

If you aren't able to catch 'em here, they'll be heading your way in a future airshow near you.

John
SE of Tucson

13425. DEMA Radio Network

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-02-14 18:45:28 UTC
From: John
Topic: 13425 Message: 13425

Interesting trafic on the Department of Emergency and Military Affairs (DEMA) Radio Net heard simulcast on freqs 148.3250 and 149.6500 while mobile in Prescott Valley, also have heard on 142.800 while in Phoenix:

Today's net included "51 A" type call signs, as well as BULLSEYE, CASA GRANDE, CRATER 12, DIAMONDBACK 71, DOGPOUND, GECKO 7, and HORNEYTOAD.

"Dogpound" is the Papago Military Reservation, and is regulary heard in comms with "Coyote" units, ArmyNG Blackhawks, probably in support of CBP operations with position reports indicating border areas and southern Arizona smuggler trafic areas.(Recently heard a SAR mission on the net and saw a TV interview later that day with a AZNG Blackhawk pilot at Papago detailing the mission.)

"Bullseye" is usually heard comms with "Raymond ##" - Possible AirNG helos (as "Raymond" is an USAF tactical callsign). Coyote units will also talk to Bullseye with ETAs.

"Diamondback" units have been heard last summer re heavy construction traffic - maybe one of the AZ NG's construction battalions on summer training.

FM. They are in the mil area near Ham 2 meter.

Wednesdays sometime between 9 and 10 AM.

The DEMA net uses ALL frequencies ALL the time [multi-cast], unless a paticular station has been removed from the party-line for local activities.

Craig,

As a fellow surprise resident let me tell you this..
Surprise PD talks about 20 mins every 24hr period. My
buddies are Surprise PD and they all Instant message
each other and calls from dispatch and talk is very
little few and far inbetween. I have A pro 96 works
great. I listen to MCSO which is where the action is
at, just lock out all the posse member chit chat and
animal control etc etc. Email me if you need any help!

Thanks Chris, Perhaps you just saved me a bundle. Like i said my main interest was surprise pd and fire, mabey i dont need a digital after all if they never use the darn radio. Mabey ill get the pro 528 instead. I would like to know where all the fire calls are. They come into mountain vista ranch all the time. I dont need a digital for that. Thanks again for the info.

When the National Guard ran it, yes, it was called 'Broadway Consumer'.
Now it belongs to the Department of Emergency and Military Affairs
[DEMA], and is called DEMA Net.

Walter

BTW, there are also some HF freqs.

Didn't forget them - I just haven't persomally verified they were active. I only report what I hear. BTW, do you know what the HF freqs are - or at least the bands?

I hear quite a bit of SoAZ traffic on the COTHEN HF net - mostly Omaha units in comms with Hammer - the lat/long and other landmarks put them near the AZ/CA/Mex border.

Actually followed one Omaha flight from Net-1 to Cothens and back - not bad from Yavapai County.

13437. BCD396 Firmware Upgrade

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-02-16 16:46:23 UTC
From: Doug
Topic: 13437 Message: 13437

This is mainly for those of you in the Phoneix area and who monitor with the Bearcat396.

There was a firmware update put out a few days ago. Have any of you updated your scanner? And, what are your results?

I updated mine and Phoenix PD is coming in worse. I'm going to play around with the settings to see if it will improve.

Just wondering what others have noticed.

I did two things after "playing around" manually setting up my own experimental Phx PD schemes. Results were poor but usefull learning process.

I just :
1 Upgraded the firmware and upgraded Scancontrol to 6.0
2 Used usd files from the group files section.
Results now are what I would have expected.

Perhaps I'm just a bit slow this morning, but does "results now are what I would have expected" mean that the firmware upgrade improved reception of PHX PD? I also live in Phoenix and have been wondering if I should put the upgrade on. I want to be sure before doing it. In my case it's a 996.

On my 396 it really improved the sound quality for MCSO but Phoenix was real choppy. I reinstalled the old firmware for now once I get some extra time I will upload the new version and try adjusting the settings and see how it sounds then.

Upgrade Lee,

I've seen improvement on both the 396 and the 996

Dave, KK7RE
Glendale, AZ

----- Original Message -----
From: tljb7
Perhaps I'm just a bit slow this morning, but does "results now are what I would have expected" mean that the firmware upgrade improved reception of PHX PD? I also live in Phoenix and have been wondering if I should put the upgrade on. I want to be sure before doing it. In my case it's a 996.
Thanks for your time,
Lee

Yes Phoenix360.com which is the ABC15 one has DPS, Rural Metro and Sky Harbor ATC on it but it doesn't seem to be scanning PFD anymore last time I checked last week. I'm not sure whats up with azcentral.com. Wasting there bandwidth. I've e-mailed customer support a few times over 2 months but to of no avail. E-mails must not be reaching the right place. However, there is a member on this group that scans the PHoenix area FD's but he doesn't wish for it to be publizised, we'll see if he answers up for ya.

13447. Re: BCD396 Firmware Upgrade

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-02-17 19:43:12 UTC
From: tbierney
Topic: 13438 Message: 13447

My 396 changed from usually unreadable to almost like an analog scanner! on Phx Pd system.
Unfortunately I did two things at the same time so not sure which created the most benefit, i.e. upgrade & used downloaded usd files.

Noticed something else that may help others when discussing perceived rx sensitivity, better antennas and digital decoding settings.
The Phx PD system has multiple transmitter sites. Just as I was concluding one antenna was better than another I realised the "better antenna" condition was when my 396 was using the control channel in system E as I am out west.
When my 396 locked onto Thompson Peak out east (further away) - lower signal level - the audio quality decreased and the 396 took longer to AUTO down to o decoding error.
Hope this helps

Topic: 13451 Message: 13451

I was leaving my friend's house for the trip back to Arizona this morning when I noticed a felony traffic stop on a side road in Mobile AZ this morning. There was a MCSO unit with a deputy, and backing him up a black SUV with a lightbar, ...I think it had gold lettering but I didnt want to whip a uturn to check out the scene...at least with the shotgun still pointing at the suspect vehicle.

I turned on the scanner and TG 43120 popped right up and it appeared to be a burglary suspect caught with some loot. Anyone know what agency that black vehicle would belong to?

From: Danz, Dan
Topic: 13443 Message: 13453

If you want to receive Phoenix POLICE, you need to use the Phoenix A and/or Phoenix C sites. Each system (A or C) has multiple transmitter SITES using the same frequency (that's what's so great about CQPSK modulation). I seldom hear the SkyHarbor TGs on A, but I always hear them on C. Be careful when referring to SITES - the Phoenix area setup is actually 5 systems and a bunch of intellipeaters. The main systems have multiple SITES each, but the transmitter/receivers at those sites all use the same frequencies for a given system. Look at the documentation in SWFD and you'll see what I'm talking about. Notice how many tower locations Phoenix and Mesa have. Each of these is a SITE, but you program a control-channel frequency as what Uniden calls a site. So Phoenix A is a Uniden site, and so is each intellipeater.

Phoenix E is west valley - not my usual haunt, but the last time I checked, it carried only fire and city utility talkgroups - not the PD talkgroups.

Since you're in Glendale, the E system is probably is the strongest signal, but I don't think you'll get much action on it.

The Thompson peak site is an Intellipeater and is mainly for fill in for Mesa or to cover the case when a Phoenix car gets off the reservation, so to speak (or maybe it's a Phoenix car that gets on the reservation, as in Ft McDowell or Salt River Pima Maricopa). So you only hear things on it when there's an affiliated unit. Intellipeater frequencies should NEVER be programmed in the same system on your scanner as a main site. If your radio decides to use the intellipeater frequency as the control channel, you will probably get great reception but very few transmissions of any value. If you really want to use an intellipeater, my suggestion is to program it as its own system and ID search it, locking out TGs that you don't want ... you never know who's going to show up on it.

On a 396, you don't have much way of influencing site selection - if you put in ALL the control channels in for the system and don't lock any out, it will settle on the first control channel it finds. On my 996, I have each site (A, C) separate and turn them on and off with SQKs but on my 396, I am forced to have all but the one I want locked out. And I have one setup where A and C are separate systems, with talkgroups duplicated. It's the best for me moving around town.

Warning: don't ever

Hope this help.

The Sabre radios used by Phoenix Regional Dispatch are 24 channels, set in two decks of 12 (each deck is 1-12, not 1-24). A-Deck channels 1-12 and are voiced without the "A". B-Deck channels 1-12 are voiced as "BLUE DECK"

Blue 1 and 2 are Chandler.
Blue 3 and 4 are Rural Metro.
Blue 8, 9 and 10 are Mesa.
Blue 12 is Buckeye/Buckeye Valley.
Blue 5, 6 and 7 used to be the Phoenix PD HOT channels, but are now vacant channels.
Blue 11 is unassigned, but currently has channel A-1 (Channel 1) programmed.

Ok well there not that bad. They are very careful as to what they say. I wish they would dispatch the calls via radio but they dont. Too bad for the citizens of surprise. I was listening to them the other night on my patio and didnt hear much of nothing. Then i hear loud banging on my neighbors door and there were the cops. Kinda funny.
But I have a question. The medcom channels. There is a freq then an input channel, should i program the main freq or the input freq or both???
Thanks in advance.

Re: MED channels

The 'input' is the frequency that the mountaintop repeater listens to.
Unless you 'happen' to live at an extremely high site, then you only
need to program in the 463.xxx frequencies.

As to Surprise PD. If they do all this stuff by cellphones/IM, then
how do they record it for legal purposes?

Walter

I believe they dispatch by mdt. There is alot of units telling others to "21" them, They keep the radio chatter to a minimum regarding any calls there on unless they have to depending on whats going on. Unlike phoenix and the others i hear all the dispatch, and the talk back and forth of whats going on. Like i said too bad for the citizens, I would like to know when the police are going to be in my neighborhood and more specifically why.

From: ka1jfy
Topic: 13411 Message: 13465

"21" is short for '10-21' which means to call by telephone.

Has anyone seen an MDT/MDC in a Surprise car?
I didn't think they had either one.

Your desire for clarity/transparency is exactly why routine radio
traffic SHOULD be in the clear, and recorded.

Walter

I have seen the computer terminal the other night in a car so they
must have them.

Anyone have "scanner recorder" off the the internet.
it is shareware.. I am unable to get it to record!!

using mic input to computer and of course plugged into scanner and no luck.
:(

anyone have this? any advise?

What type of scanner do you have? I use "ScanRec," the recording program I'm assuming everyone is talking about...and it works no problem on my BCD996T. It might be your audio card as well...on my old computer the mic input just up and quit working.

Hi John,

Hopefully someone has answered you already...if not, check these links out:

District 1 map:
http://www.scottsdaleaz.gov/LawEnforcement/districts/pdf/d1.pdf

District 2 map:
http://www.scottsdaleaz.gov/LawEnforcement/districts/pdf/d2.pdf

District 3 map:
http://www.scottsdaleaz.gov/LawEnforcement/districts/pdf/d3.pdf

Each map also includes the beat dividers. The files are rather large and
display kinda slowly...so I'd recommend downloading them rather than just
clicking the link.

Enjoy!

I heard last night surprises first Hot Call, they do dispatch them by
radio. I do not wish they convey every bit of information via radio
if it is sensitive in nature and can put anyone at risk more than
they already are doing that job. But routine calls, you know, "see
the man" :) No reason those can't be broadcast for yours or mine
information.

All of the old VHF/UHF 15x and 45x Frequencies no longer exist - the entire system is now digital.
Do you have a Pro 96 or another model from Radioshack? If you have anything other
than a Pro-96 or a Uniden 796D/996D/396D, you will not be able to receive Phoenix PD as they
do not transmit in Analog anymore.

A good resource to pick up is the Southwest Frequency Directory - http://www.scannerstuff.com/swfd.htm
You can also get the latest frequencies off of Radio Reference - www.radioreference.com

So what exactly are these EMSCOMM channels? Are these like the Ambulance to Hospital freq's? If so what are they if you don't mind my asking.

13488. VHF Military Aircraft Band Activity

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-03-01 02:45:23 UTC
From: Dave Bohmke
Topic: 13488 Message: 13488

The following have been very active within the last few days with training and tactical traffic. Received with Yaesu HT in Tempe just searching the band in AM mode. Wondering if anyone recognized any of these frequencies?

138.150
141.550
138.875
142.225
138.225
139.900
149.200
149.500
149.150
149.525
148.525
143.800
140.425
143.925
141.675

13489. ACC Heritage Conference at DMAFB - Arrivals - 28 Feb 07

Hello all,

I took a trip on base by base ops. The following are currently there as
of 6pm:

2 - F-22's
4 - A-10's
3 - P-51's
2 - F-4's
5 - F-15's
6? - F-16's

Based upon previous years activity, there are more to come :)

I listened to my recording for today to see who flew in today by callsign
and can readily ID the following:

F-22 - Raptor-41/42
F-16 - Hitman-1/2 (Viper West Heritage Demonstration Team - Self ID'ed)
F-15 - Demo-1/2 with 2 P-51's
F-4 - Phantom 1/2, Phantom-11
F-16 - Rainman-1
P-51 - Mustang-01/02

13490. School Bus Frequencies

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-03-02 00:59:06 UTC
From: John Timmons
Topic: 13490 Message: 13490

As an educator, I enjoy listening to the school bus commications in my district, but would also like to monitor bus traffic in other area districts, as well. I previously posted this same query many, many months ago with no productive responses. So, once again, does anyone have the correct, active frequencies for the following school districts:

Chandler Unified
Casa Grande Union High School
Maricopa Unified
Kyrene

Thank you in advance for any replies.

John N7LQR

13495. Control channel change for Sky Harbor system?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-03-02 05:41:59 UTC
From: Jon M. Hanson
Topic: 13495 Message: 13495

Has anyone noticed that the Sky Harbor system has changed its control channels? I was there tonight to pick-up my dad and I wasn't there very long but it never seemed that it stopped on that system at all. When I tried to hold on it I couldn't find a control channel. I have 868.45 and 868.3 programmed in as control channels.

Thanks for the information, Jim. Normally when I listen to them at the airport it's a pretty busy system between the people coordinating the cabs and the other airport operations so I was surprised when I just heard the aircraft-related frequencies and nothing else. I've put those additional control channels in my scanner for the next time.

Sounds good. I travel a lot and listen while I am waiting for the AWA
flight. I try to listen from South Tempe and have trouble with South
Mountain in the way. I understand that the APCO system is on Term 3
Also I understand that there is 6M repeater somewhere on the grounds
52.010 that uses remote receivers in North Phoenix and Mesa.

Do you know what the system is for Southwest? I also listen to the
Americ a West 900 system Hear it well here in South Tempe

My copy of the Southwest Frequency Directory shows the following trunked frequencies for Southwest Airlines (Mototola Type II): 935.075, 935.5125, 935.525, 935.5375, 936.6125, 938.5375, and 938.5875. It lists the following talkgroups all as "ground operations:" 28400, 28432, 28464, and 28496. There are also some conventional frequencies listed:

Maintenance Department: 463.6125 (simplex)

Maintenance Department: 468.6125 (simplex; although this one and the one above look suspiciously like a repeater pair)

Maintenance Department: 469.6125 (simplex)

Phoenix Operations: 129.75

Phoenix Maintenance: 131.7

Just listened to my recording for the day:

Here are the callsigns used:

Callsign Aircraft Type
Airboss Controller
Mustang P-51
Phantom-1 F-4
Phantom-32 F-4
?Purse?-71 F-15 or F-22?
Strike-32 F-15
Strike-33 P-51
Viper-32 F-16
Viper-33 F-16
Viper-34 F-16
Viper-41 F-16

Frequencies:
127.15mhz - Airboss
327.70mhz - Airboss
376.025mhz - F-15/F-16/F-22, Raptor-Control

You listen to AWA on the radio at home? I'm sure you'd agree with me that
its GREAT entertainment. :) Might as well sell the TV.

13508. Salt River Project/EDACS narrowband

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-03-03 20:33:54 UTC
From: Jon M. Hanson
Topic: 13508 Message: 13508

I was going to program in the Salt River Project radio system into my 996 and 396. In the Southwest Frequency Directory it lists this system as EDACS narrowband (page 170). In the programming software it wants the trunked channels in LCN order but they aren't listed in any kind of LCN order in the Southwest Frequency Directory. Is anyone else monitoring Salt River Project who knows what the LCN order needs to be?

13509. ACC Heritage Conference at DMAFB - 3 Mar 07

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-03-04 06:13:04 UTC
From: FLANO 2
Topic: 13489 Message: 13509

Today started out windy and cold, but ended somewhat warmer. The P-38 is a no show...again.

The F-22 is very impressive again. This time as it begins the show, immediately upon take off at show central, it changes to a vertical aspect at about 100 or so feet of the runway. It then climbs and "floats" horizontally in the air before moving forward. Even all the military folks were oohing and ahhing.

For those listening remotely here are the frequencies to listen in on for Sunday, 4 March:

118.50mhz - A2A Discrete
118.85mhz - DM Tower VHF
123.15mhz - A-10/F-16 Demos and Multi-Ship formations
123.45mhz - A2A Multi-Ship formations
127.15mhz - Airboss
253.50mhz - DM Tower UHF
327.70mhz - DM SOF and Airboss
376.025mhz - Raptor Control
384.55mhz - F-16

13512. School Bus Frequencies Query #2

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-03-09 20:18:14 UTC
From: John Timmons
Topic: 13512 Message: 13512

A week or so ago, I posted a query inquiring if anyone had the CORRECT, active school bus frequencies for several area school districts, namely, Chandler, Kyrene, Maricopa Unified School District, and Casa Grande High School. Tom was gracious in listing a number of frequencies that appeared to be those listed in the SWFD, but unfortunately, are NOT correct in terms of bus transportation.

School districts often use multiple frequencies for various operations, such as Maintenance, Principal-Teachers, Grounds, Security, and of course, bus transportation. The frequencies listed previously may be used for other operations, but are not being used for bus communications. Some of these districts, especially those in Pinal County, may be leasing frequencies on a linked repeater system from one or more two-way radio companies. Buses from the districts mentioned above all have short antennas, commonly used on the 800 and 900 Mhz. bands. They are about 11-12 inches in heighth and are coiled in the middle.

If anyone knows or can obtain the bus frequencies used by these districts, I would be most appreciative. My searches have netted negative results. Our Yahoo scanner page host and resident frequency guru, Dan Rollman, has no knowledge of the frequencies, either. LET THE SEARCH BEGIN !!!

John N7LQR

P.S.- did the two people who asked about school bus frequencies for the Mesa and Gilbert School Districts find the correct frequency for your district?

13513. Wheres a good site to get frequencie information

Yahoo group: ArizonaScanner (2007 — 2012)

From: wlmr1001
Topic: 13495 Message: 13514

Sky Harbor (Sky Harbor Airport)
868.4500
867.6375
867.1875*
867.8375*
* = alternate control channels used only if both the first two are
out of service.

These are directly from a list from the City of Phoenix. The PDF
file is in the Files section of this Group and has all the sites and
their control channel frequencies.

From: Chris F.
Topic: 13512 Message: 13515

John,

Have you considred contacting the district for the information?
You might also want to try a FCC Lookup for them.

Chris

Subject: [ArizonaScanner.com] School Bus Frequencies Query #2

A week or so ago, I posted a query inquiring if anyone had the
CORRECT, active school bus frequencies for several area school
districts, namely, Chandler, Kyrene, Maricopa Unified School
District, and Casa Grande High School. Tom was gracious in listing a
number of frequencies that appeared to be those listed in the SWFD,
but unfortunately, are NOT correct in terms of bus transportation.

School districts often use multiple frequencies for various
operations, such as Maintenance, Principal-Teachers, Grounds,
Security, and of course, bus transportation. The frequencies listed
previously may be used for other operations, but are not being used
for bus communications. Some of these districts, especially those in
Pinal County, may be leasing frequencies on a linked repeater system
from one or more two-way radio companies. Buses from the districts
mentioned above all have short antennas, commonly used on the 800
and 900 Mhz. bands. They are about 11-12 inches in heighth and are
coiled in the middle.

If anyone knows or can obtain the bus frequencies used by these
districts, I would be most appreciative. My searches have netted
negative results. Our Yahoo scanner page host and resident frequency
guru, Dan Rollman, has no knowledge of the frequencies, either. LET
THE SEARCH BEGIN !!!

John N7LQR

P.S.- did the two people who asked about school bus frequencies for
the Mesa and Gilbert School Districts find the correct frequency for
your district?

From: Jon M. Hanson
Topic: 13517 Message: 13517

When looking over my programming for the Sky Harbor system I noticed that I was on the intellirepeater at Sky Harbor. The Southwest Frequency Directory says to use Simulcast A for Sky Harbor so I'm not sure why I had the intellirepeater programmed in. The funny thing is that I've gone to Sky Harbor many times in the past and I heard lots of activity but on the intellirepeater's control channels. When I went to Sky Harbor again with the correct programming this time, I wasn't there long enough to see if I could hear the activity on Simulcast A.

Sky Harbor (Sky Harbor Airport)
868.4500
867.6375
867.1875*
867.8375*
* = alternate control channels used only if both the first two are
out of service.

These are directly from a list from the City of Phoenix. The PDF
file is in the Files section of this Group and has all the sites and
their control channel frequencies.

If they ARE renting space on [Fisher's, Creative's, etc.] trunkers, then
you're pretty much out of luck.
[I happen to know that at least one of the districts in the valley does just
that]
These are LTR with Passport, and nobody has a scanner-only solution.
The users do NOT need an FCC license, as it's covered by the commercial
radio service provider's.
And then, you'd have to somehow collect/find the pertinent talkgroup
numbers.

Now, if you're willing to listen to a whole lot of extraneous stuff, you can
program the trunker frequencies in the conventional mode and determine which
is the home channel for the buses, and then only listen to that. But you'd
have to find/figure out who the provider is.

If you're a scanner geek, then E-Trunk [and some others] are what you need,
and then plug in the licensed frequencies for the service provider.

DVUSD in the north valley uses C&M services. They are 800 LTR Trunked.
Northern Communications also has Buses on their VHF LTR Trunked system.

It's that time again!

Highlights for this airshow will be the USN Blue Angels with the F/A-18 (Hornet) and the C-130 (Hercules), aka Fat Albert.

Also slotted for the show are and A-10, F-16, Combat Search and Rescue (CSAR), Heritage Flight (F-4/F-117/P-51) demos. An F-117 will conduct a fly-by only.

In addition, the US Army Golden Knights Parachute Team, the Air Force Reserve Aerobatic Team, Red Bull Team, Ed Hamill, Tim Weber, Greg Poe, Kirby Chambliss, and the Tuskegee Double Vee will also perform.

Show time is 11am to 4pm.

Check out the following website for do's and don'ts at this airshow, and how to get on base - http://www.dmairshow.com/

13526. Seville Golf and Country Club in south Gilbert

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-03-11 16:40:02 UTC
From: Jon M. Hanson
Topic: 13526 Message: 13526

Next week I'll be moving into a new home in the Seville Golf and Country Club subdivision in south Gilbert. I like to listed to everything on the scanner including businesses when I'm in them. Since I'll be close to the golf course I decided to figure out what frequency or frequencies they are using for their operations. I took my 396 up to the pro shop yesterday and waited patiently for the Close Call to alert me. Sure enough I got a hit on 452.925 MHz (100.0 Hz PL tone) simplex that I know they were using because I could hear their radios as well as the output from mine at the same time. I also researched them on the FCC database and it returned 452.7 MHz and 457.7 MHz
(http://dettifoss.fcc.gov/acweb/viewer/viewframeset.jsp?__executableid=208&id=11822&connectionhandle=q7whmBpUho%2btg5MUYUgZxq1%2brbtKHLkAq7RmnwSbegyRYEMWxKx8m0pEgUAaXCZHB8MSDImIexxWt7foY7wBuIMEv18lQxjMCQCTjGYfVbM%3d&closex=null&outputname=%2fgenmen%5fa%2fdb%5f19%2fd%5fadmin%5fl%5flm.roi&saveoutput=false&outputType=ROI&serverurl=http%3a%2f%2fdettifoss%3a8088&volume=dettifoss8)
but not 452.925 MHz. Researching 452.925 MHz shows it to be a railroad frequency in several searches I did. Maybe I noted the frequency wrong so I'll have to double-check it, but have other traditional ranges (like the railroad frequency here) been opened up to general business use?

13527. Bluedeck 1 & 2 Simulcast on PRWN and TG 2396?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-03-11 18:15:47 UTC
From: n2ygh
Topic: 13527 Message: 13527

I dont listen to much stuff on the PRWN, but started to as of late.

I've recently heard simulcast of PhxFd BDeck 1&2 on the PRWN, BDeck 1 on TG 131, BDeck 2 on TG 132. Is this normal? Thought it was a strange talkgroup assignment considering most PhxFd is in the 1700's

At first I only heard TG 132 and though perhaps this because of the Ostrich Festival as some kind of interop TG. Bdeck1/TG 131 was harder to nab as it doesn't get much use, but its there.

Noticed also traffic on TG 2396, heard a call out to "Ranger" units, would this be Park Rangers or the volunteer "Pangers" one sees around?

You can hear Simulcast A throughout Phoenix, at least if you're North of South Mountain. I haven't heard any Sky Harbor talkgroups when I've listened to Simulcast A, just when I listened to the Sky Harbor site. Are you sure the Southwest Frequency Directory is correct about them being on Simulcast A?

13529. Re: [ArizonaScanner.com] Control channel change for Sky Harbor system?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-03-11 04:49:04 UTC
From: wlmr1001
Topic: 13495 Message: 13529

I'm not sure 868.3000 is correct any more. I've cut & pasted part of the orignal message where he states that 868.4500 was working & when it disappeared (control channel switched?) 868.3000 didn't work either.

-pasted quote-
Has anyone noticed that the Sky Harbor system has changed its control channels? I was there tonight to pick-up my dad and I wasn't there very long but it never seemed that it stopped on that system at all. When I tried to hold on it I couldn't find a control channel. I have 868.45 and 868.3 programmed in as control channels.

Jon M. Hanson (N7ZVJ)
-end of pasted quote-

That got me curious if the list of control channels that are here in the files section differed from what was being talked about in the messages. The letter from the City of Phoenix (in PDF form here) dated December '05 has the list that is the reason for the message I sent earlier.

I know that the two frequencies you list as being the control channels were the original ones back when Sky Harbor initially transitioned away from the EDACS system but (I think) the letter from the City is more recent.

Does anyone reading this have a RS PRO96 scanner & PRO96COM software that can monitor the Sky Harbor site? If so, let's let the site itself tell us. As much as I trust the letter from the city, if there's any doubt I'd rather everyone be using the correct info. Even if it means I was wrong. (It's been known to happen!)

So, anyone? What's the site broadcasting?

13530. RE: [ArizonaScanner.com] Control channel change for Sky Harbor system?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-03-12 17:09:36 UTC
From: Danz, Dan
Topic: 13517 Message: 13530

The rule would be: you should always hear Sky Harbor on the Simulcast C system, maybe on the simulcast A system, and maybe on the southmountain Intellipeater.

"Maybe" becomes positive IF and ONLY IF at least one user affiliates with that system using a sky harbor talkgroup. And then only THAT talkgroup is carried by the repeater.

Intellipeaters are EVIL for scanners. If you program an intellipeater along with the other frequencies for a system, you stand the chance of the scanner selecting the intellipeater control channel to monitor - and now you're stuck on a system that seldom carries much traffic.

If you have a 996, you should program the intellipeater as a separate site, sharing the talkgroups. And if you put it on a different SQK, you can enable/disable it separately.

If you have a 396, you should program the intellipeater as a separate system, and duplicate the talk groups. (Or run that system in SEARCH mode).

If you have a Pro 96, somebody else will have to guide you.

Subject: Re: [ArizonaScanner.com] Control channel change for Sky Harbor system?

When looking over my programming for the Sky Harbor system I noticed that I was on the intellirepeater at Sky Harbor. The Southwest Frequency Directory says to use Simulcast A for Sky Harbor so I'm not sure why I had the intellirepeater programmed in. The funny thing is that I've gone to Sky Harbor many times in the past and I heard lots of activity but on the intellirepeater's control channels. When I went to Sky Harbor again with the correct programming this time, I wasn't there long enough to see if I could hear the activity on Simulcast A.

Sky Harbor (Sky Harbor Airport)
868.4500
867.6375
867.1875*
867.8375*
* = alternate control channels used only if both the first two are out of service.

These are directly from a list from the City of Phoenix. The PDF file is in the Files section of this Group and has all the sites and their control channel frequencies.

13532. RE: [ArizonaScanner.com] Control channel change for Sky Harbor system?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-03-12 17:22:13 UTC
From: Danz, Dan
Topic: 13517 Message: 13532

Very occasionally on Simulcast A ... I don't often have the
intellipeater enabled, so I can't answer for that.

I regularly hear them on System C (which is Site 202) when I'm in that
area, which I have programmed as 867.2 and 867.975 ...

The frequencies you mention are an intellipeater .. site 103 ... and
just because it's in the 1xx series, I'll be that the radio service guys
intend it to be used more for Fire Ops than public safety. I would
expect site 203/South Mountain IR to be use for public safety.

But remember, they can program the radios to do whatever they want.

Thanks, I will program system c and try to listen. Site 103 is the terminal 3 location and is a stand alone system linked to other towers with the intellerepeaters. this is what I am told. I am using a 996 and a 396 here in South Tempe.

13534. Re: [ArizonaScanner.com] Control channel change for Sky Harbor system?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-03-13 00:54:04 UTC
From: Jon M. Hanson
Topic: 13517 Message: 13534

On page 103 of the latest edition of the Southwest Frequency Directory is where it has the information for the Sky Harbor talkgroups. It says this right about the talkgroups: "Primarily use 'Simulcast A' (above) on City of Phoenix Trunked System." It also has "A-Phx" next to each talkgroup that it lists.

There is a Simulcast A system on Terminal 4 according to the Southwest Frequency Directory (page 105). It also says that Terminal 4 is the location of the Sky Harbor Intellipeater (page 107). I find it kind of strange that Terminal 4 is both a simulcast site and an Intellipeater site.

13535. Re: [ArizonaScanner.com] Control channel change for Sky Harbor system?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-03-13 02:24:07 UTC
From: wlmr1001
Topic: 13517 Message: 13535

Didn't want to be left without knowing so took out a PRO96 scanner and ran some software that decodes the control channel data.

(The software is free & can be found at the PRO96COM yahoo group. I'm very impressed, if you have a radio shack PRO96 scanner this is great for 9600 baud P25 systems.

Got a good capture receiving the Sky Harbor system. I've pasted in the data from the file.

For anyone not familiar with the program, the frequencies list has the following codes beside the frequencies.
C= frequency has been used as a control channel
A= frequency has been broadcast as an alternate control channel
V= frequency has been used for voice traffic
D= frequency has been used for data traffic
I= frequency has been used for identifier (call sign in morse code)

-so without further ado, the data-

```
FileVersion:3
-TowerInfo
#This section is here for information only. With the exception
#of the Call Sign(s), This data is not Read back into the program at all.
System ID : 534
System Name : Phoenix
WACN : bee08
Tower Number (Decimal): 103
Tower Number (Hex) : T0103
Tower Description : Sky_Harbor
Control Capabilities : Data,Voice,Registration
Call Sign(s) : WPWS651
Timestamp : Mon Mar 12 17:00:32 2007

-Tables
#Format: Table ID,Base Freq,Spacing,Input
Offset,Assumed/Confirmed,BandWidth
00,851.00625,0.00625,-45.00000,"Confirmed",0.00625
01,762.00625,0.00625,30.00000,"Confirmed",0.00625
02,136.00000,0.01250,6.77500,"Confirmed",0.01250
03,136.00000,0.01250,5.96250,"Confirmed",0.01250
04,136.00000,0.01250,5.70000,"Confirmed",0.01250
05,136.00000,0.01250,6.83750,"Confirmed",0.01250
06,136.00000,0.01250,4.67500,"Confirmed",0.01250
```

-Frequencies
#Format: Channel,Usage,Frequency
"00-2589","avd",867.18750
"00-2613","vdi",867.33750
"00-2661","c",867.63750
"00-2693","avd",867.83750
"00-2729","vd",868.06250
"00-2767","vd",868.30000
"00-2791","av",868.45000

-Neighbors
#Format: TowerID,TowerIDHex,System ID,Channel,Frequency,Tower Name
101,"T0101",534,"00-2709",867.93750,"Simulcast B"
202,"T0202",534,"00-2591",867.20000,"Simulcast C"
203,"T0203",534,"00-2769",868.31250,"South Mountain"

The system is broadcasting the same control channels as I posted below as coming from the City of Phoenix letter. I welcome everyone to crosscheck the info (I'm sure I monitored the right control channel based on the info I captured but you won't embarasss me if you find something I did wrong!) Looks like right now 867.6375 is the active control channel.

As far as hearing the Airport talkgroups at which site - I can say I've heard then on the Sky Harbor intellirepeater. (I did see talkgroup IDs in the activity screen that seemed to match the airport talkgroups listed over at RadioReference.com) If they are also appearing on Simulcast A or C I can't say for sure. I've lost who reminded me that you only hear talkgroups when a radio is affiliated to the site so I might have been listening at the wrong time to those sites. But for sure the intellirepeater site 103 is heavily used by the airport talkgroups. Self contained usage vs wider area usage?

Simulcast site for Simulcast A and it's own intellirepeater site? Must be a good location for coverage?

13536. Re: [ArizonaScanner.com] Control channel change for Sky Harbor system?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-03-13 03:03:49 UTC
From: Jon M. Hanson
Topic: 13517 Message: 13536

When I've been to Sky Harbor before with the scanner I've always found that system to be pretty busy (I listen to everything). The funny thing is that up until this last time I had the Intellipeater programmed in exclusively for some reason. I know the Intellipeater should not be the primary thing you listen to. The only thing I can think of is that maybe previously they were using the Intellipeater as a normal simulcast site or that the simulcast site was so busy that it forced Sky Harbor off onto the Intellipeater.

I appreciate the information below on how the Sky Harbor system should really be programmed. Even on Simulcast A I didn't hear anything (in ID scan mode with just the Sky Harbor talkgroups programmed in) when I was dropping off my dad for his flight. Like I mentioned before Sky Harbor's system always seemed pretty active to me so I should have heard something in the five or so minutes that I was there (and it wasn't in the middle of the night or anything).

Maybe the Sky Harbor Intellipeater has been upgraded to a full-fledged simulcast site. Having a simulcast system and an Intellipeater at exactly the same location seems counter-intuitive to me. It also doesn't make sense to put the repeater for Sky Harbor right on top of Terminal 4. You would think that it would create dead spots in the shadow of the antenna(s) directly underneath them. That is where the Simulcast C system makes sense because it's located in Tempe so I don't know what to think.

Very cool, sorry for being off subject, but is there any decoding
software like this for the 996 and 396?

Thanks,

Steve K2AUX

Quick answer - sorta.

If you go to the Yahoo group PRO96COM you learn that that the software I used is exclusive to the Radioshack PRO96 and only works on systems with a 9600 baud control channel. Good news, it's free.

If you go to RadioReference.com you'll find forums devoted to various software decoders for systems (not just Motorola) and interesting ways of tapping into scanner discriminators for the purpose of extracting data streams.

At this point you're either shuddering or saying bring it on! In either case, you now know as much as I do on the subject.

13539. Scanning over the years in Maricopa County

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-03-13 04:19:18 UTC
From: k7rtm
Topic: 13539 Message: 13539

Greetings to the group,

I cried when things started going digital in Maricopa County. I quickly lost interest in scanning to concentrate more on amateur radio. Oh how I miss the days of listening to Mesa PD channel 5 on my Kenwood TS-2000 on a Friday night!

I've lived in the valley all my life; I can remember listening to Tempe PD on a very old "realistic"(I think) AM/FM/PD radio my mother owned back in the 70's.

I remember my first direct entry no-crystals-needed scanner.

My Pro-34.

My Pro-34 changed everything, was that the late 80's yes? Ahhh, then my Pro-2006! I got *so* many miles out of that unit.. Had my Pro-43 when downtown Tempe was well on its way of being the collegiate version of Sodom and Gomorrah. I used to seek out the action to observe on my bike with Pro-43 in fanny pack and headphones, so much fun.

Anyways, my question to the group is, can you still hear the "action" or is all the good chatter encrypted for us to not enjoy? The only digital chatter I've ever listened to was a few years ago on a HT radio shack unit, Phoenix PD sounded horrible as was reception of whatever I tried to monitor. I spent a day with the scanner, frustrated; I returned it for a refund.

I don't have a problem dropping the $$ on a BCD996T/BCD396T and putting up a discone on the roof (is a discone still the way to go these days?), but are the goods still in the air for us to enjoy on a crazy Friday night after the Budweiser starts to flow in the dark streets of Mesa? Or is the action encrypted for none of us denizens of the desert to enjoy.. ? Looking forward to possibly becoming active again.

73,
K7RTM
Tim

From: John
Topic: 13527 Message: 13540

I listened to the Ostrich Festival throughout the weekend, and tell you that the Chandler Police had no way to communicate to the Chandler Fire Dept. without radioing the police dispatcher, having that dispatcher call (on the phone) the Phoenix Dispatcher, and that dispatcher radio the truck.

A band member passed out, and the Police were trying to direct the truck to the scene around hard road closures, crowds, and the parade. I felt very sorry for that band member as the fire truck ws being tracked by the police, but the PD was unable to anything more than react to what the truck was doing.

I know that Chandler is not a part of the Phoenix/ Mesa digital system, butit seems strange and unsafe for the PD not to be able to call the FD on the radio.

The band member was fine, and was released to meet up with the ret of the band.

John

From: Jim Piroli
Topic: 13517 Message: 13541

My understanding talking with several people up at HRO my Saturday
hagout place. The antenna is on terminal 3 I notice dead spots in
terminal 3 and 4 due to it being right above me and have had several
people who work on it and it a single site. I do not know how they
patch into the other systems if it is RF or wired

Jim
KE7EEU

Great stuff to figure out

Does anyone know the eact location of 53.010 6m repeater. I firat was
told it is on terminal 4, bu then was told it is on a cominications
tower on the North runway??? Any one know abou this?

Usually at that festival there is a roaming bike team from CFD has some BLS type equipment with them to get to the crowds, along with an engine on the scene also close by with the rest of the gear. Surprised it wasn't there this year...

From: Eric
Topic: 13543 Message: 13543

I was wondering, what happen to the ADOT Phoenix Trunking system? I was in the Phoenix area the last 5 days and when I tried to listen to the Motorola 800MHz system with my radios the control channel was active but there wasn't any transmissions. I was using the info from page 34 in the Southwest Freq Directory 9th edition. Just thought I would ask for future trips. Thanks for your help in this matter.

Definitely still in service.

We've been working on it almost every week trying to keep it going until a replacement/upgrade plan of action comes along.

Just make sure you have ALL 4 control channels programmed in. This sytem rotates the control channel every night at midnight.

Rick,
You possibly could be correct, but I would be terribly surprised
the department would operate on VHF frequencies. I believe the
frequencies you noted, which I have seen on a scanner frequency
website, are used for Public Works.

Thanks, Rick.

I asked the same question about 165.6375 last week and was informed via email that this is a Fed link for the PRWN system. I haven't monitored it much, but plan on letting my ARC996 software log the talkgroups perhaps tommorow.

13550. Re: Maricopa Police Department

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-03-15 05:27:21 UTC
From: gemcohauler
Topic: 13546 Message: 13550

I found this interesting paragraph recently on the Arizona APCO website...

VHF/UHF/800 MHz Frequency Reassignment Committee Report: Harold Pierson reported that letters of concurrence had been sent to Pinal County and AK Chin. Maricopa Fire requested a frequency and Larry Sayers sent a letter to them stating there are no frequencies available at this time. John Minick commented that the City of Mesa would be giving back 6 more VHF frequencies. Harold Pierson will post the giveback frequencies on the APCO website.
Larry Sayers reported no word back from City of Phoenix regarding their giveback frequencies

http://www.az-apco-nena.org/ARRC/ARRCMinutes070124.doc

I took a look at Maricopa's startup budget on the city website, and it didnt include dispatching positions....I have heard they plan a dispatching center in the future, but perhaps they will hire PCSO to begin with?

> Rick,
> You possibly could be correct, but I would be terribly surprised
> the department would operate on VHF frequencies.

Dodge? Well, we know they will be changing cars soon then. Dodge cars are usually good for about 75k miles max. Given the Crown Vic's outstanding reliability and long life, why?

They should get a lot of action though, as all of the people who couldn't afford to live in normal places moved to places like Maricopa, and Queen Creek during the housing boom. Can you say "cars on blocks"?

Per a recent newspaper article, the new City of Maricopa Police
Department will officially commence operations on July 1 with black and
white Dodge Charger patrol cruisers. Does anyone know what frequency(s)
the department will be operating?

Tower Cranes
There are 4 of them in the down town Tempe area and one northeast of
Sun Devil Stadium. All of them are using these VHF simplex frequencies

151.955-PL-162.2 Mill & Rio across from the mill
151.515-Mill & University area "Tower One"
154.600-Mill & University area "Tower Two"
151.595-Washington & Mill near SRP Crosscut

haven't heard from the one by ASU yet?

Here is the study on the formation of the police department.

http://www.cityofmaricopa.net/Assets/Maricopa_PD_ExecSum_PDF.pdf

I heard they sent an email out to lateral candidates last week directing them to the application on the City of Maricopa website. And reading through the "study" it seemed to indicate that they would eventually deploy a day shift at first, before having enough officers to cover all three shifts (in reality, five people for each officer position)

http://www.cityofmaricopa.net/police/index.html

In any case, there is no mention of hiring any dispatchers, etc....so they are likely to stick with PCSO for that, and then they can use those frequencies for now?

Now there is talk that since Maricopa's population growth has faltered, that spending needs to be pared down....I dont know how that affects the plan or not.

I read that the new ethanol plant near Cow Town is partially funding a batallion chief position for FD Maricopa, so they have someone trained in responding to a fuel plant.

13558. Blue Angels Arrive DMAFB - 15 March 07

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-03-16 06:10:07 UTC
From: FLANO 2
Topic: 13558 Message: 13558

The Blue Angels have arrived for the airshow this weekend at Davis-Monthan AFB. The show area was scouted out by the "Boss" and one other aircraft, pointing out landmarks for reference points on turns, approaches, etc.

The Blue Angels than practiced their show over Tucson. They went out west past the downtown area, south to the area of the Tucson International Airport, and east to no visible landmarks. If you live in Tucson, you won't miss them :)

They should be practicing again tomorrow. Here's what they used today:

237.80mhz
275.35mhz
284.25mhz

Keep an eye out for other practice activity tomorrow, other than the Blue Angels.

John

CVPI's are due for a major change in body style in 2008. Ford is not discontinuing them
the last I read and know. If they do discontinue them, they will change it to Fleet sales only.
No way they can just abandon such a lucrative market with Police sales.

Where did you get this information from?

13563. Arizona Rangers are looking to set up a state wide communications system,

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-03-16 21:57:04 UTC
From: xtruky
Topic: 13563 Message: 13563

Which is something we do not have right now.

Gentlemen, Ladies too

My name is Jeff East; I am a newly appointed Sergeant in charge of communications for the Scottsdale Company of the Arizona Rangers. We (I) have a dilemma. We need new radios, not only for my company of 12 men, but the State Commander is looking to set up a statewide communications system, using repeaters, I believe. We have nothing right now in which my Commander could communicate with other area Commanders within the Rangers. I'm scratching my head, and looking for some suggestions!

The Arizona Rangers are an unpaid, noncommissioned civilian auxiliary that is available for the purpose of assistance to and support for law enforcement in this state. We are a 501C3 organization, supported and by the Office of the Governor and the state of Arizona.
We are trained to AZPOST standards, and are available to assist Law Enforcement anywhere within the State of Arizona.

Our members currently have some different types of Motorola handhelds. We operate in the 155.XXX frequency range. Some of our radios have as much as 16-channel capability, but we do not have them completely full. Our Show Low group is using ICON 2 channel radios.

Any ideas or suggestions would surely be appreciated.
Oh did I mention we have NO state of federal funding???
This is a shoestring budget, at best.

Thank you in advance

Jeff East
Arizona Ranger
Scottsdale Company

Well, at the risk of deviating here, this is a scanner thread after all, the CV isn't going away. It may be reborn, but will stay v-8 and rwd. That is what makes a good PD car. I am a big ford guy and have owned a few crown vics along side my stang gt, and keep up on these things. They do plan a new design but it will be along the same lines. No, car anywhere can match the track record of the crown vic as a work horse. Dodge has a well, spotty record as far as car reliability. I do think the new models are their best yet but can they match the crown vic? Doubtful. Many departments are now using the Malibu, which will fail as did the celebrity, when that was tried. Cheaply made front wheel drive cars do not hold up in extreme Arizona conditions. The rwd Dodge may make it, but it faces a real challenge unseating the CV.

Police departments forget lessons learned from time to time when new people get into new positions.

The ironic part is this. Arizona PD's don't generally condone high speed chases anyway. So of what use is a 350 HP car to the average cop here in AZ?

Nextel-statewide coverage and beyond, free unlimited walkie talkie feature and even talk around simplex off network feature is available on some of the newer phones. It's low cost and effective. Allot of gov and other agencies use this service. I have had them for some time now and had a usable service signal in some very remote places around the state.
Another option would be to subscribe to one of the many LTR service providers around the valley who offer statewide coverage but at a considerable cost not to mention the cost of the equipment you would need.

I found 616 users in Maricopa county alone (151.490 to 151.985) not to mention the overwhelming amount unlicensed users out there who just find a frequency and start using it like these construction guys who are using these frequencies for general operations in the Tempe down town area. This is a fun band to monitor

Hi Jon,

The "A-Phx" next to the talkgroups is a misprint. If you look at the online updates for the Southwest Frequency Directory, there is an update for page 103. Here is a quote:

"Airport talkgroups are on the Sky Harbor Intellirepeater, not System A."

From: wlmr1001
Topic: 13517 Message: 13571

Thanks for the correction Joe,

This matches what I was hearing when I monitored the Intellirepeater. Maybe unless there is a reason for a talkgroup to work way north of the airport it is only on the Sky Harbor Intellirepeater and not on Simulcast A or C.

Jon, as far as the reason for both an Intellirepeater and a Simulcast A Site at Sky Harbor, could the Intellirepeater be for local airport stuff, and the simulcast site be to help with the coverage area of Simulcast A?

Has anyone noticed police or fire talkgroups on the Intellirepeater site?

From the list I've seen on the RadioReference web site Simulcast A and B both seem to provide radio coverage for the entire city of Phoenix with the locations of the simulcast sites (subsites?) listed. Makes sense I guess that Sky Harbor would be included help cover the city.

From: BP
Topic: 13517 Message: 13572

1. Anyone know why we had Squad 29 and Squad 29A a while back, was 29a supposed to be a truck like Squad19?

2. I noticed on Chandler Fire now instead of Southwest 281 or PMT 283 we just hear Rescue 281, Rescue 283 etc. are these still the contract ambos with the rescue name, or have they switched to their own rescues like Phoenix?

From: Ed (K9EDK)
Topic: 13573 Message: 13573

1. SQ29 was in the shop and they were using an LT until the SQ returned. The LT is too small for all the equipment, so it took two apparatus to make up one Squad, thus 29 and 29A

2. Yes and no, or is that no and yes, or no and no, or yes and yes? The Chandler ambulances referred to as Rescues are staffed by one firefighter and one PMT or SW employee and run out of regular fire stations (I think). You will still hear SW and PMT units dispatched in Chandler, and they are the ones still fully staffed by the company.

Hope this helps.

Ed

From: FLANO 2
Topic: 13574 Message: 13574

Confirmed a couple of freqs at the show today. I used a PRO-96 and PRO-97 with success on everything except for the BA Comm Cart freqs. Apparently too NB for the PRO-96 Here's today's freqs:

Airshow (General):
118.50mhz - Discrete
122.475mhz - Hog Demo w/pyrotechnics Discrete
123.15mhz - Red Baron
123.474mhz - Golden Knights
127.15mhz - Air Boss
376.025mhz - F-117 Demo, F-4's in Heritage Flight

Blue Angels:
139.8125mhz - Comm Cart
142.6125mhz - Comm Cart, Channel 3A
237.80mhz - Solos
275.30mhz - Diamond
284.25mhz - Diamond/Solos
346.50mhz - Safety Officer?

Civil Air Patrol:
397.175mhz - ISR Ch 03

Combat SAR:
40.80mhz - A-10 A2A
251.90mhz - SAR Coordination

What is LTR??
We need the use of walkie talkies, not of the cellular phone type
regular old cop style handhelds.

There is a company called fisher wireless which has a system called
teamtalk you could call them and check their coverage and pricing.
Here is the link for there website http://www.fisherwireless.com they
also have coverage maps on their site.

13581. Is my old scanner now a paper weight?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-03-20 02:31:28 UTC
From: sjo987654321
Topic: 13581 Message: 13581

We're moving, and while packing I found my old radio shack pro-46 scanner and tried to show my 7-year old son how cool it is to listen to the Phoenix PD. No luck.

So I went on the internet to try to find out what freqs Phoenix PD uses, and I guess they now do it completely differently. I don't understand the technicalities, but I just want to be able to use this scanner for PD. Am I out of luck?

Thanks

You need a digital trunking scanner to listen to the Phoenix Police.

You can still listen to Phoenix Fire dispatch on 154.19 MHz. That
should be just as interesting.

There is still plenty to listen to, although not Phoenix PD any
longer without the use of a digital trunking scanner. Since I don't
yet have a digital scanner (or even a trunking one for
that matter), all I can listen to are the analog conventional
channels. You can look through the Southwest Frequency Directory
(available online through scannerstuff.com, or at the Ham Radio
Outlet on Dunlap just west of 19th Ave.) for
the exact frequencies, but here's some agencies:

Fire:
Phoenix (Phoenix, Glendale, Peoria, Sun City-Youngtown, Surprise, Sun
City West, Laveen, Tolleson, Avondale, Goodyear, Buckeye, Buckeye
Valley, Gila Bend rescues, Daisy Mtn., Scottsdale, Tempe, Guadalupe,
Chandler, Sun Lakes.)

Mesa-Gilbert-Apache Junction (They're on Mesa's digital trunked
system, but simulcasts to VHF for mutual-aid purposes.)

Salt River Pima/Maricopa Indian Community (Fire and Medics)

Ft. McDowell Yavapai Apache Indian Community

Harquahala Valley, and Tonopah Valley (Far west, out I-10)

Wittmann, Circle City-Morristown, and Wickenburg (Up Grand Ave/U.S.
60.)

Rural-Metro (Anywhere not mentioned above.)

Arizona State Land Department.

Law Enforcement:
DPS Metro West, Metro Central, Metro East, TAC West, TAC East, CID, and Statewide channels.

Arizona Department of Corrections (TAC channels are repeatered).

Arizona Department of Juvenile Corrections.

Arizona State Capitol Police.

Arizona State University Police.

Arizona State Game and Fish Department.

MCSO Search-8 and Parks VHF. (Parks VHF seems to be used exclusively at Lake Pleasant by Parks and Trails deputies and possibly Lake Patrol deputies.)

Sun City Sheriff's Posse. (800MHz analog conventional.)

Peoria PD. (UHF)

Avondale PD. (May still be UHF, or have they switched to the county system?)

Goodyear PD. (800MHz analog conventional)

Tolleson PD. (800MHz analog conventional)

Apache Junction PD. (VHF)

Ft. McDowell Tribal Police. (UHF Goverment)

Medical:
Southwest Ambulance.

PMT Ambulance.

Air Evac Helicopters.

Also try 123.025, which is used by all the police, medical, and media helicopters to keep track of each other, especially over an incident scene, and 123.550, where you can hear chatter between the Phoenix PD pilots when there's 2 helo's up, like during shift change.

Where you live, and any outside antenna you may have, will determine exactly what you can and cannot hear from that list. Over here in Peoria, I don't get some of the East Valley stuff (Mesa-Gilbert-AJ, etc.) very well since I don't have an outside antenna, and their systems aren't designed to give coverage this far west, anyway.

John

Yea, noise doesn't "vocode" well & if it's strong enough that's it for understanding what's said. I've seen some noise cancelling microphones do surprisingly well though in dealing with this. One related example of noise cancellation is the PD helecopters flying above Phoenix & Mesa. I can't hear Mesa's from where I am but no problem understanding Phoenix PD's aircraft when they are working with the ground officers.

Just as bad of problem may be the dynamic range of the microphones analog or digital. Does the breathing apparatus have a built in microphone & is it noise cancelling?

I am going on a cruise in May leaving Phoenix AZ to Sacramento , San Juan then on a ship from there to Italy has anyone taken along their 396 and Ht with any problems with the airports or through customs?

I would appreciate any tips or recommendations from the group.

And for those who get offended if this is off topic to them please do not reply.

I've gone 2 times thru Peoria, IL, Atlanta and Miami Airports last year enroute to a cruise without any problem with my 396T. I just kept it in my carry on bag, they ran the bag thru the bomb scanner thing and that was that. No questions asked about the scanner, even on the check ins back which was a day after that new warning with all the liquids and stuff.

Mike. I work as a travel counselor and fly all the time. I usually carry my ham radio VHF/UHF Ht and a Icom marine VHF Ht when I am going to be around water. I have never had any problems. I just have them in my carry on bag and they go through x-ray just fine. I always take my Sony SWL receiver also. No problems.
Have fun. Gary (WB7CAG) (W7GWF)...

13593. Frequencies of Week from KB7AQD

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-03-22 17:43:24 UTC
From: Robert Homuth
Topic: 13593 Message: 13593

Thank you for investigating 151.955 MHz last week.

I will post four frequencies, to give more variety:

464.500 464.550 469.500 469.550 MHz

They are common business frequencies preprogrammed into HT's. The 464 MHz frequencies can be used as a repeater output, too, in addition to simplex.

I am near Phoenix Spectrum Mall, Bethany Home Road and 19th Avenue. Please let me know what you hear on air, as opposed to who is licensed to be here.

Have fun, and tell us what you copy!

Thank you,
KB7AQD

13603. Urgent help needed in the AZ Legislature senate committee OT

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-03-25 04:51:03 UTC
From: Ed Cifelli
Topic: 13603 Message: 13603

I know that this is OT, but there are many hams that are on the group that may not have seen this. it has to do with changing the HOA rules to allow us hams to have somew kind of antenna. Please read the message below and try to email the senator who is head of the committee that is holding up the HB2595 bill. We need to ask him to proceed with the bill and to not let it die in the committee, which could happen on Monday.

13604. Luke Days 2007

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-03-26 16:25:23 UTC
From: ka1jfy
Topic: 13604 Message: 13604

First I want to thank 'khaluca' for posting the .P96 from the 2005 Luke days!!!!!!

All I did was download it with no edits, and it was wondferful listening to the Air Boss on 126.250, the base trunker with all the lost kid calls, and especially the cockpit comms for the Thunderbirds. [Note, I never did hear T'Birds 5 & 6 by themselves, only #1 with the whole group]

I got the list in on Saturday morning and I heard a couple of transmissions on the T'Birds frequency 143.250(?).

They put on an amazing show, even thought the boss only called it an A- over the radio. Saturday was the first show of the season, and maybe they were a little nervous doing it at the field where the demonstration team originated.

Now, did anyone else hear the 'speeches' that the pilots gave just before they rolled out? With all the engine and crowd noise, it was hard to make out.

When they have this event again in 2009, I will definitely use (an) earpiece(s) to listen to the radio(s). Hanging the scanners from my epaulets just wasn't good enough.

Walter

13608. Re: Luke Days 2007

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-03-29 03:42:39 UTC
From: azbobkat
Topic: 13604 Message: 13608

I too want to thank those responsible for the freqs. I did hear the 5 and 6 'Birds on 235.250 I think. I did do some editting from Saturday into Sunday (had to check out both days). Saturday was fortunate to know the B2 was coming just as the Boss heard it coming from the Northwest. Saturday did not use an earpiece but Sunday I did try one and it was very advantageous.

The little 'ditties' at the beginning were pretty cool, too and they made mention to the fact that this was the first show and they were anxious to get going after four months of training.

Listening added a whole new dimension to the show.

Reminder from: ArizonaScanner Yahoo! Group
http://groups.yahoo.com/group/ArizonaScanner/cal

ICP Monthly Scanner Get Together
Saturday March 31, 2007
6:00 pm - 9:00 pm
(This event repeats every month on the last Saturday.)
Location: Fuddruckers - The Worlds Greatest Hamburger
Street: 1928 E Highland Ave
City State Zip: Phoenix, AZ 85016

Notes:
Join Phoenix & sourrounding area scanner enthusiests for dinner. There are people with the latest & greatest scanners who will offer programming help & ideas.

Fuddruckers is located in the Camelback Colonnade on Highland just north east of the 51 Freeway.

More information is located @ WWW.ICP-AZ.ORG

13610. INS/ICE Frequencies

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-03-31 04:39:54 UTC
From: roots_grow_ten
Topic: 13610 Message: 13610

I'm trying to track down freqs to track local Immigration and Customs Enforcement (formerly INS) activity. It seems like with all the recent raids and whatnot, there'd be a lot of traffic. I found a list of Border Patrol freqs on Radio Ref, but my understanding is that ICE is a separate body. Do they use their own frequencies? Has anyone had any luck picking them up around Phoenix?

Thanks

Sean

No scanner will decode an encrypted transmission. The reason the one you bought won't decode Phoenix Police is because the 796 can't decode P25 control channels with data speeds at 9600 baud, which is what the Phoenix Police uses. The 796 can decode P25 control channels with data speeds at 3600 baud. I think Maricopa County's control channel runs at 3600 baud but I'm not completely sure about that.

Jon,

It's the BC785D that can only decode 3600 baud control channels. The BC796D can decode both 3600 and 9600 baud control channels.

Fred,

I'm only in the Phoenix area occasionally, but it looks like both the Southwest Frequency Directory and RadioReference indicates that Phoenix is using a lot of encryption. Look at the mode column at the following (D = Digital, E = Encryption):

http://www.radioreference.com/modules.php?name=RR&sid=2508

You may want to pick up a copy of the Southwest Frequency Directory:

http://www.scannerstuff.com/swfd.htm

Someone local should be able to comment about Phoenix's use of encryption and what you can still receive that is not encrypted.

Take care,
Scott

Fred,

Phoenix still has plenty to listen to, most of the encrypted stuff is Narcotics and other undercover ops! Still a lot of traffic there is Glendale Pd, Mesa, Mcso, that includes Avondale, Elmirage all digital and open comms for the most part, There is also a lot of analog trunking and conventional stuff in the clear.

I work at Intel at Rural Road and Chandler Boulevard on the forth floor of an office building. I heard voice activity of 464.5000 MHz from my location. I didn't hear enough to figure out who was using it or what they were doing. On 464.5500 MHz I heard some pretty strong signals, but again not enough to figure out who they were. None of the traffic sounded like it was on a repeater (I didn't hear a squelch tail).

On the Intel campus we use an LTR trunked radio system. But we have outside companies coming in all the time doing work so some of the stronger signals may have been something like that. I was hoping I would hear a location that I recognized so that I could tie the activity to the Intel campus but I did not. Like I mentioned, I'm up on the fourth floor so I might be picking up some traffic from further away than someone listening at their house.

I have a Uniden 396 and I like to use the Close Call feature to figure out business frequencies when I go someplace. I catalog what I find on my wiki: http://the-hansons-az.net/mediawiki/index.php/Scanner_information. There's not a lot of information there but I'm building it slowly.

Near Metro Center, now hear wideband data pulses on 469.550 MHz.

And, near Arrowhead Mall, hear English language maintenance and janitorial calls on 464.500 simplex, and Spanish on 464.550 simplex. Both very strong.

13623. Frequencies of Week: 123.025 Helicopters/123.450 Aero

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-04-04 18:38:17 UTC
From: Robert Homuth
Topic: 13623 Message: 13623

Besides Phoenix PD, and medical helicopters, listen to this common aero frequency, 123.025 and let us know how many different helicopters you monitor. Look for unusual traffic, or odd police reports.

The air-to-air frequency 123.450 has a lot of unauthorized users who chat when they are flying. Check this out for a week or so, and see if you hear unusual traffic.

Thanks,
KB7AQD

Robert

123.45 is a very common air to air and airshow freq, last I checked
there are no frequency assignments other than airport towers, regional
centers and some common frequencies, other than that anything in the
air is pretty much fair game.

123.025 is the nationwide calling channel for rotor wing aircraft. In the Los Angeles area the helicopter routes pretty much follow the freeways and when a helicopter pilot is approaching a freeway interchange he will call out his direction of flight and altitude.

If you would like to see the helicopter route maps for the Phoenix area, go to a pilot shop at your local airport where you can purchase these maps.

Tracy, skyvector.com will show you the area sectionals, I think that it uses your IP to figure out where you are then brings up the correct chart for you based on that. Some stuff is still free on the web!

$20/yr. If you have the right equipment you can download to your computer and then load to your radio. You can phone the site from the track for last minute changes to load manually.

Scott
Thanks for the info on my new BC796D. Oh what a relief to know that
it will work for me. I am going to stop by HRO and see if they have
the Southwest Frequency Directory. I have one but I won't tell you
how old it is. If they don't have one I will be ordering from
scannerstuff (free shipping)yippee. I'm also going to order the arc
250 butel software unless someone screems STOP. Thanks again for the
info.
Fred

Thanks Mike. I've got a lot to learn about this scanner. I've had
scanners in the past and had some problems programming the 780xlt.
Well, I sort of got it programed. I wish they were as simple as the
old RS pro-2021 but they're not. I've been away from scanners and
more into shortwave for the past few years. Geeeze...talk groups,
control channels, type 1 and 2, and maybe 3. Ok, I've got to get back
into the book. Thanks for the info, I need all the help I can get.

That is the correct frequency.

Peoria has been having SO many problems with there radios that it's not even funny. Myself living in peoria for the past 3 years, I am starting to feel un-safe because of the way the radio system is. Either its not working correct, or you have 3-4 officers tryin to clear over each other. Listen for 24 hours, and you'll see exactly what I mean.

They SERIOUSLY need to upgrade systems, because honestly it's
pathetic
and unsafe to the public. Infact, I was pondering on contacting the local news, and news paper to do a story about it. It's bad when the residents feel unsafe because of there old radios.

They can't even get a proper patch runnin with surrounding agencys over half the time. When they need assentice from other agencys/helicopters. They more often then not, cant communicate with them.

No offense but the dispatchers- need to build some self confidence, and run the radio better. Tell officers to HOLD THERE TRAFFIC UNLESS ASKED TO ANSWER UP FOR THE CALL. For instance when emergency traffic comes out. You'll have the officers in that beat being covered by officers in surrounding beats. No one gets across the radio. The dispatcher cant even finish the call information without waiting for 3-4 officers to answer up. Totally un-safe. Especially if there is an officer already on scene.

Let's not even get into the way peoria prioritizes calls.

They need to sit in with some glendale dispatchers, and listen how it SHOULD be done.

Listening to peoria is like watching re-runs of The Andy Griffith show. Totally laughable. Whoever's bright idea it's been to keep this old outdated radio system should be fired. It's time to move on.

Whats the holdup? ..... Tax dollars being wasted on other stuff?

Make sure you've got all their channels. They will switch traffic to ch. 2 or 3 if ch. 1 is down for whatever reason. As a previous comment mentioned, it may just have been a quiet period as well.

Ch. 2 - 460.125
Ch. 3 - 460.600 (and ch. 5 simplex)
Ch. 4 - 460.350 (and ch. 6 simplex)
Ch. 7 - 453.675 simplex only

Ya'll are talking about two seperate aircraft types, in two seperate locations.

The 2 AWACS (Airborne Warning And Control System) aircraft were in the state due to the President being down in Yuma talking to troops about the immigration issue I believe it was. They must have stopped at Luke for refueling or something when the original commenter observed them.

And the 4 F-16's did a flyover at Chase Field for the Diamondbacks game.

I missed both due to being at work in Glendale at the time.

Jim,

Totally agree. I believe Peoria is about one of the last, outside of DPS, still using a UHF system.
I believe because their system is so old, they actually have to go thru DPS to get a 800Mhz patch,
if they don't have that multi-system patch system in-a-briefcase thing...

They may be keeping the UHF system up and in operation due to the fact they have such wide open
areas they have to cover, UHF propogates better over longer distances if I remember correctly. Hell,
they had a bitch of a time getting ANY coverage for the northern part of the City when they put the
North station up, and last I heard, there are still dead spots.

Only thing I think is good about it is it's not a damn digital system, and even better, not encrypted.

I remember seeing a document that they were SUPPOSED to be going to a 850Mhz system, but
obviously that still hasn't materialized.

I DO HOPE they keep it unencrypted when they do go Digital, if ever.

However, Don't go calling attention to their Radio system though, that's a good reason they can use to block
us out from listening by encrypting. You should consider being more proactive and contact the
City council or Chief of Police for more info about what they are doing before going that route, use
the Media as a last resort.

And yes, Glendale does a mighty fine job of dispatching!

Chris

I agree. I love listening to them. Im glad they have left us with
that ability, no doubt. I also believe it is in the publics and leo's
best interests to keep day to day communications in the clear, as it
can sometime's be a benefit all around.

I'm just looking out for myself, and family. I just hope they can get
the job done
efficiently and effectively, and safely. I can tell just by listening
to the surrounding agencys (Phoenix, Glendale) they have more time to
pay attention to the tasks they are involved in. Without needing the
extra time to repeat themselfs, and fighting over the airtime.
This leave's more time to concentrate on the task currently at hand.

As for the radio coverage area, especially up north. I dont see why
they have not tried to get on with the MSCO system. Unless the
problem exists on their system also? It seems they would need better
coverage for the lake area's then peoria has now.

I dont know. I could be totally wrong. Wouldn't be the first time,
haha.

Jim.

Jim,

Again, totally agree.
Officers I have talked with have said that Peoria isn't one of the best departments to work for -
training and technology are severly lacking with them from what i've heard.

I agree. I love listening to them. Im glad they have left us with that ability, no doubt. I also believe it is in the publics and leo's best interests to keep day to day communications in the clear, as it can sometime's be a benefit all around.

I'm just looking out for myself, and family. I just hope they can get the job done
efficiently and effectively, and safely. I can tell just by listening to the surrounding agencys (Phoenix, Glendale) they have more time to pay attention to the tasks they are involved in. Without needing the extra time to repeat themselfs, and fighting over the airtime.
This leave's more time to concentrate on the task currently at hand.

As for the radio coverage area, especially up north. I dont see why they have not tried to get on with the MSCO system. Unless the problem exists on their system also? It seems they would need better coverage for the lake area's then peoria has now.

I dont know. I could be totally wrong. Wouldn't be the first time, haha.

Jim.

Gotta jump in here.

DPS does NOT do any 800 MHz patching for other agencies, as we don't have any 800 MHz resources of our own.
We DO have 2 radios on the PRWN for patching, but we have to call Phoenix to activate them.

As to Peoria's radio system. They are currently evaluating bids on a whole new system.

Let me correct myself on DPS - it is MCSO. MCSO can do patching between different systems.

13654. DPS statewide messages

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-04-13 17:10:04 UTC
From: Jason McDowell
Topic: 13654 Message: 13654

Does AZ have a statewide designated channel for emergencies? Like a channel to broadcast messages where every agency in that area will hear? If so what is the frequency? Sort of like here in IL, we have whats called ISPERN. The State agencies broadcast BOLO's that every agency in about a 70 by 70 mile radius hears, they also sound tones when a Trooper has a warrant stop so that any local agency can respond quickly. Just wondering if AZ had anything like that so I could listen to it on dxtuners.

Jason

Yes i agree that Peoria PD radios are awful i know
from listening that they always talk over each other
when they have emergency traffic and when they need a
helicopter to help look for people. I also wasn't
aware of a north PD station wheres it located?

I also heard that Glendale is wanting a PD helicopter
and like two fixed wings for surveillance

No. You need to understand the politics.
The top law enforcement officals in the Sate of Arizona are the elected sheriff's.
DPS cannot [by charter] become the 'state police' like in a number of other states.

We have 'STATE' which is available at almost all radio sites, and is controlled by each of the dispatch centers. But we have no rights/responsibilities like you ask about.

Walter

No, it's Phoenix.

All the dispatches in the valley have a couple of radios on the PRWN,
provided by DOJ for alerting and patching.

That is a training issue with the officers talking over each other, not a radio issue. Granted if they went to a TRS then it would only let 1 person at a time talk but it still is a training issue.

I posted this originally, and it was California. As of this morning no charges had been filed against the officer.

http://www.trisquare.us/products.htm

Here are some new spread-spectrum 902 MHz handitalkies. Have you seen them for sale?

My brother wants to get his ham license, and we are also looking over various other two-way radio services like MURS, FRS and GMRS for nonham communications.

Do you have some recommendations for no-license two-way radios, regarding durability, range, and price?

Thank you,
Robert C. Homuth

I listened to 123.025 MHz for several days at my office on the fourth floor of a building at Rural Road and Chandler Boulevard. I heard some activity but only one time was it really clear to make things out and even then I didn't hear the helicopters' callsigns.

I didn't hear any activity at all on 123.45 MHz.

I work at Intel and we have a lot of computer/server equipment on my floor. I've got a small magnetic-mount scanner antenna on top of my cube wall to kind of get above the noise but I'm sure all of the computer equipment isn't helping things. I know that I cannot receive the NOAA weather channel at all in my office; I have to be over by a window to pick it up.

Listen to 123.025 in the morning or afternoon during rush hour,
especially if you're near the I-10.

What you'll typically hear are the traffic reporters that all know
each other by first name talking to each other as they orbit near the
stack or make their way east/west and typically call out their
altitude, direction and if they know one of the others are in the
vicinity they will chit chat.

Basically they help each other out so they don't collide. Don't expect
call signs, unless they are over a scene, then you might hear
something more formal, otherwise, it's comms on a first name basis.

Also make sure you're monitoring in AM and not FM that might be why
you're not hearing things clearly.

From: Jon M. Hanson
Topic: 13623 Message: 13667

I listened to that frequency all day and didn't hear anything. I'm pretty sure I didn't hear anything because of all of the interference of all of the equipment in my building. My scanner automatically changes to AM when it needs to depending on the frequency it's listening to so it's not because it was in FM mode when it should have been in AM mode. I know at home I've heard some traffic on 123.025 MHz but there is much less computer equipment there.

The North Peoria PD location is on Lake Pleasant Rd. between Williams Rd. and Pinnacle Peak. Rd on the west side of the road. It called the Pinnacle Peak Public Safety Building as it is shared with Peoria Fire Station 5. Last I heard it wasnt being staffed due to a reorganiziation, or a shifting of "priorities" but would be restaffed in the future.

Here are some new spread-spectrum 902 MHz handitalkies. Have you seen them for sale?

My brother wants to get his ham license, and we are also looking over various other two-way radio services like MURS, FRS and GMRS for nonham communications.

Do you have some recommendations for no-license two-way radios, regarding durability, range, and price?

Thank you,

OFF DUTY ORANGE COUNTY S.O. DEPUTY HAS BEEN INVOLVED IN A SHOOTING
>> AT MILEPOST 75 ON I-40 ABOUT 22 MILES EAST OF KINGMAN ARIZONA

I'm not James, and not seeing any source in the original post made it a
bit hard to locate info, but here is from today's Kingman AZ Daily Miner
at
http://www.kingmandailyminer.com/main.asp?
SectionID=13&SubSectionID=18&ArticleID=11855&TM=85974.73

"The second incident happened about 9:30 p.m. on Interstate 40 at
milepost 74.5.

An engine and two personnel from the Pinion Pine Fire Department
responded to the westbound lanes, firefighter and EMT Kevin Gifford
said. Upon arrival, firefighters found a man lying behind a
tractor-trailer with gunshot wounds to his abdomen and right arm.
Guardian Air flew him to a hospital in Las Vegas, Gifford said.

The second shooting may have been a road rage incident.

Carter identified the driver of the tractor-trailer as Kenneth Lamar
Quarles, 45, of Crandall, Ga. Albert Macias, 41, of Cerritos, Calif.,
the driver of a GMC pickup, allegedly shot Quarles. Macias is a deputy
sheriff.

Quarles told deputies the pickup had cut him off earlier. Macias claimed
the tractor-trailer had swerved into his lane and knocked off his
passenger side mirror, Carter said.

"Both drivers pulled over to the shoulder of the road with the tractor
in front and GMC behind it," Carter said. "Quarles got out with a
crowbar and hammer and advanced toward Macias in a threatening manner.

"Macias told him to stop and that he was a deputy sheriff. When Quarles
did not stop, the deputy shot him.

There was no information available this morning on the condition of
Quarles."

Just a reminder, the GMRS (General Mobile Radio Service) DOES require
a license, however all you need to do is fill out the online
application form, pay the fee by credit card, and you'll have a
license within days.

If you're interested in the GMRS, check out
http://www.popularwireless.com/pra.html in addition to the various
bulletin board forums at http://www.popularwireless.com/

Drove by PIR on the way home tonight, didn't have a scanner but did have my ICOM 207h mobile and swept the 450-451, 455-456 & 460-463 bands picking up a lot of early activity.

Didn't log any channels cause I needed to get home but there was some chatter from stadium operations on the 460 channels, and there was a hit on a 450 channel with a couple of tv techs talking about re-routing a fiber run to a production truck.

Just passing on the info...

If he did, it was not dispatched before the shooting. I was listening to this and the first call on the scanner came out as a shooting, possibly stemming from road rage. So, as far as I know, the first call was after the shooting itself.

Also another item that would be interesting would be the sequence of events of the vehicles pulling off the road. If the truck had pulled over first the deputy should have just kept going unless he was going to flash his badge and attempt an arrest, in which case he should have caled 911 first. If the deputy was pulled over and then the truck stoped, that is a different story completely. Maybe we will find out.

Why should the deputy have kept going? He had just been involved in a collision involving property damage. I don't know the level of "road rage" involved (i.e. whether they were clearly and intentionally being aggressive or whether it was a single incident of someone cutting someone else off while changing lanes), but if it was a simple case of getting cut off the deputy could easily have assumed the truck was pulling over to exchange insurance information, as required by law, in which case continuing on would arguably be fleeing the scene of an accident (even if your vehicle suffered more damage).

If a collision occurs and one party pulls off the road and stops while the other flees, don't we hear that broadcast as a hit and run? I don't think "fault" in the collision is relevant: If you are involved in a wreck with obvious damage I think the law says you stop (unless it isn't safe to do so, and that's where the level of previous road rage may be relevant).

Clearly this is an incident that necessitates a comprehensive investigation so I'm sure more will be known in time.

13681. NASCAR @ PIR UPDATE

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-04-20 23:53:26 UTC
From: ftlaud_dj
Topic: 13681 Message: 13681

The signals are hotter than a firecracker, clear comms throughout the west valley from about 99th Ave and I-10 through most of Goodyear and Avondale.

The following freqs were hot today while qualifying was going on, also heard some comms from Mr. Waltrip while he took a run around the track likely for broadcast during the race. There was one really odd hit on 455.225 where ATC is being patched over to this freq, unknown why or from where.

Enjoy these if you're in the area this weekend.

PIR LIVE FREQS

450.1125 IFB
450.2125 IFB
455.0125 IFB
455.3000 IFB
450.3375 IFB
450.4250 IFB
450.5250 IFB
450.5625 IFB

ODD >>> 455.225 <<< AIR TRAFFIC CONTROL - UNKNOWN SOURCE
CALLING "YAMAHA 1, YAMAHA 2" AT 6000 FOR 4500

450.0625 /455.0625 WL-PL
450.1375 /455.1375 WL-PL
450.1625 /455.1625 WL-PL

Some funny comms on the IFB channels, every time they cut to commercial, they were playing a loop of Frampton's Do you feel like I do and the announcers were singing right along, if it was American Idol, Simon would be tearing them a new one!

13682. Casa Grande PD replacing radio system

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-04-21 19:45:00 UTC
From: trunkh8er
Topic: 13682 Message: 13682

Article from Casa Grande Dispatch newspaper does not say if they are only replacing VHF-hi system or if something else is coming:

++++

Casa Grande's main police radio system failed about two weeks ago, but the city has found money to replace it as a loaner is used. The City Council on Monday night approved a plan to replace the radio system, at a cost of about $207,000...The radio system consists of several pieces of equipment of different ages, up to 20 years old. Some of this equipment failed.

"We have other options we can use when this happens, but they are less than ideal," Chief Bob Huddleston said, explaining that other channels are not as strong as the main channel that is sent to repeaters.

The department found that parts for the old radio were not available. To replace one of the parts of the old system would be like putting a bandage on it, communications manager Mike Brashier reported.

Brashier was asked to draw up a plan for replacement of all radio equipment, and that was submitted to the city manager. Huddleston said it was agreed replacement of the radio system is a priority.

After council approval, equipment was ordered. It should arrive within 30 days, the chief said.

Tom,

Actually, it was a lousy response. Ed had already recanted his question due to seeing that a traffic altercation took place. Dan replied more than 10 hours later without any need to.

13685. DPS: Photo radar going statewide

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-04-22 19:10:07 UTC
From: trunkh8er
Topic: 13685 Message: 13685

PHOENIX Apr 22 (AP) -- Arizona is planning to use automated equipment to enforce speed limits and catch red-light runners on state highways in the first program of its kind in the country.
The two-phase program would start with cameras in construction zones and at traffic signals on some highways.
Cameras would then be placed at selected locations on Phoenix-area freeways.
DPS program manager Commander Tom Woodward told The Associated Press that the program is starting to take shape.
In mid-May, Woodward says DPS plans to request proposals for camera-equipped vans to deploy behind barriers at construction zones to enforce speed limits and for cameras to be installed at highway intersections with speed limits of up to 45 miles per hour.
A contract for those cameras could be awarded as early as in July.
Safety experts say no other state has implemented the automated equipment on such a broad scope.

Guys, before blaming yourselves, Dan is right. I talked to my wife yesterday in California and had her send me an attachment to my Gmail account. After 5 minutes of waiting I told her to send it to my Yahoo account, after another 5 minutes, it finally showed in Yahoo and it still hasn't showed up in the Gmail. Admittedly she may have spelled her last name wrong as that's the screen name, but the fact remains that I also did not see the complete post about the traffic accident, either. (I changed the subject here)

Does anyone know what PV's Fire stations #'s are going to be
when PHX Fire takes them over ? 50's or 60's I think. Rumor is ALF pumpers just like all the other PhxFD rigs and a tanker or 2. Look for Phx to move some trucks around as well.

Also does anyone know what new fire apparatus is order for
Appache junction Pierce pumpers
Chandler nothing right now. They just got a ALF heavy rescue, Pierce midmount platform
Goodyear nothing right now. They just put in service 3 new Pierce pumpers. Look for more stuff to come.
Peoria 1 new ALF pumper
Scottsdale PS (are they changing their colors ?) PS?? You mean FD? They are out to bid on new pumpers right now. Nothing heard on changing colors yet.
Surprise 1 E-One LT, 2 E-One pumpers, 1 E-One 114-ft Bronto skylift
Sun City's Nothing since their new Pierce Quantum LT
Tempe they are deciding on what to get next. Should be at least 2 pumpers and 1 ladder at the least they are looking to purchase.

Will add: Avondale to get 1 ladder and heavy rescue/hazmat

13690. MOHAVE COUNTY DEPUTY DIES IN FATAL ACCIDENT

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-04-24 04:17:19 UTC
From: James Marcum
Topic: 13690 Message: 13690

http://www.kingmandailyminer.com/main.asp?
SectionID=13&SubSectionID=18&ArticleID=11918

KINGMAN - Mohave County Sheriff's Office employees are in mourning today following the Saturday night death of Dep. Philip Rodriguez.

Rodriguez, 21 and a 2004 graduate of Kingman High School, had just completed a patrol shift about 11 p.m. when he lost control of his cruiser on Interstate 40 near milepost 34, a news release from the Arizona Department of Public Safety stated.

The patrol car left the roadway for unknown reasons and Rodriguez was ejected in the ensuing crash. The DPS is investigating the accident.

Rodriguez was a Golden Valley resident.

"While in high school he became an Explorer Scout with the MCSO," department spokeswoman Trish Carter said.

"Deputy Rodriguez began his career with our department as a detention officer in September 2005. In August 2006, he attended the Central Arizona Regional Law Enforcement Training Academy (for 17 weeks) in Casa Grande. He graduated from it and became a deputy sheriff in December 2006."

Sheriff Tom Sheahan said his office received several 911 calls about the accident and passed them along to the DPS, which handles crashes on the interstate.

A short time later, it was determined that it was a sheriff's deputy involved when he did not respond to a radio check.

Sheahan said several deputies went to the scene to assist DPS officers as they began their investigation into the crash. Sheahan was with the family of Rodriguez after confirmation of his identity as the victim.

Rodriguez had completed field training and was in a probationary status as a first-year deputy.

"Philip excelled at everything," Sheahan said. "His whole life, from high school as an Explorer, was devoted to becoming a law enforcement officer. The dream came true last December and had a tragic end Saturday night."

He called the death a "tremendous loss, especially in light of it being of a young person with such a bright future."

Det. Steven Garibay was the last sworn officer from the MCSO to die prior to Saturday's accident, Carter said.

"On Feb. 10, 1987, Det. Garibay was assisting a Bullhead City police officer attempting to stop a fleeing suspect," she said.

"He was killed in a head-on vehicle accident on Highway 95 in Mohave Valley."

No. It needs to affiliates to the system to receive it. You also need the System Key to which only the radio technicians will have to program the trunking parameters into the radio.

Subject: Re: [ArizonaScanner.com] Motorola xts 5000

No. It needs to affiliates to the system to receive it. You also need the System Key to which only the radio technicians will have to program the trunking parameters into the radio.

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-04-27 06:06:14 UTC
From: wlmr1001
Topic: 13693 Message: 13695

Sorry, no. I've read discussions about earlier styles of Motorola trunked systems where supposedly receive only could be programed into the radio. Doesn't work for the new P25 systems like Mesa and Phoenix share. Nothing in the software.

The same messages also discussed how to keep the radio from transmitting. The conclusion seems to be removing the transmit section from the radio is the only guaranteed way. But again I've read that the radio will not start receiving until after it has affiliated. If that's true, no transmitter - no affiliation - no receiver - no good.

This still leaves the issues of programming the system into the radio in the first place.
Short answer there - massive hurdles & a proprietary system key.
The longer answer gets into the fact that the system knows when radios affiliate and radios not supposed to be there are in very real danger of being killed via a command from the system. Kinda (actually VERY) pricey gamble!

Another piece of info (sorry) is Mesa fire is on Simulcast D & Phoenix fire now has stuff transmitting on Simulcast B (sometimes Simulcast C). Unlike a scanner, the radio will not leave one Simulcast site just to scan talkgroups on another site. The radios talk and listen really well but don't scan very gracefully. Actually for these radios, scanning is about as graceful as ducks dancing ballet.

You're better off saving the money and buying a $400 to $500 scanner for around a 10th of the cost of the portable. Heck, get two!

Why, oh why would you want to relegate a $3500 radio to $400 scanner use.
Sell it and buy several scanners, with a fair chunk of change left over!

Walter

BTW, I've seen the software for these.
No option for receive only, *AND* you need a system key to program it.
AND that assumes that the radio is provisioned for P25 simulcast trunking.

Check out FreqofNature.com. He has an excellent listing compiled of all of the sites and talkgroups. San Diego PD uses an 800 MHz type 2 system. The County stuff is all 800 MHz P25.

Try adding the following channels and see if this works:854.9625, 856.7375, 857.7375, 858.4875, 860.4375 I can usually hear most voice channels in Prescott with a small whip antenna but the CCs are very weak and frequently drop out even with a 13 element 800 beam from 5800 feet elevation and LOS to Eldon.

On the far north end of Prescott I can pick up the system good enough to track with a Bc246 and the stock antenna.

13707. rebanding

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-05-05 02:58:04 UTC
From: Tom Humes
Topic: 13707 Message: 13707

My apologies for a long post. Several questions on rebanding have shown up lately. Today in MRT is the following article that may answer some questions.
Wavelengths
Rebanding ball is in FCC's court -- and people are watching
By Donny Jackson
May 4, 2007

It seems hard to believe that we're just two months short of the three-year anniversary of the FCC's controversial order that called for Nextel Communications -- now Sprint Nextel -- to pay for rebanding the 800 MHz frequencies to alleviate interference with public-safety communications systems.

Perhaps more unbelievable is the fact that not a single public-safety licensee has been rebanded during this time; in fact, none are even scheduled to move to their new frequencies, even though the two-year mark of what was supposed to be a three-year project is just eight weeks away. And no scheduling will begin until the FCC acts on a joint letter from public safety and Sprint Nextel asking that the Transition Administrator be authorized to establish a revised timetable, which likely will extend rebanding at least two additional years.

Historically, the FCC has not acted quickly on rebanding items. Appeals to the commission have taken months, and the FCC still has not determined whether Sprint Nextel fulfilled its rebanding obligations as of the 18-month benchmark, which passed more than four months ago.

And those outside the typical rebanding circle are watching. AT&T Mobility -- formerly Cingular Wireless -- recently filed a letter with the FCC stating that it is "indisputable that Sprint Nextel failed to comply" with the 18-month obligations in the order. The letter also expressed concern with the lack of progress in rebanding and the lack of focus on the unresolved problem.

"Interference in the public-safety band seems to be lost in the discussion," said Brian Fontes, AT&T Mobility's vice president of federal relations. "What seems to be the discussion now is, 'Can we get a delay? Can we get this? Can we get that?' There's no discussion anymore on the urgency to eliminate interference."

Now, skeptics will argue that you have to consider the source -- a competitor in the cutthroat wireless industry that probably would like nothing better than to see the FCC hit Sprint Nextel with some severe sanctions that could give AT&T Mobility a business advantage. In addition, AT&T Mobility and other wireless carriers opposed the rebanding order, stating that the 1.9 GHz spectrum that the FCC used as a carrot to get Nextel to accept the deal should have been auctioned to the highest bidder.

Sprint Nextel, which coincidentally asked the FCC to revisit cost and negotiation guidelines in the order on the same day that AT&T Mobility filed its letter, declined to comment on the AT&T Mobility filing. However, a company spokesman told MRT it is "curious that [AT&T Mobility] has spent years dismissing the concerns of public safety on interference ... and now they suddenly have an interest in interference as a public-safety

issue."

Regardless of AT&T Mobility's motives, it's difficult to argue against its assessment that the urgency to alleviate interference to public-safety systems that was evident three years ago has been lost in a lawyer-heavy process that has not resulted in any public-safety rebanding to date. In 2004, many questioned whether we could wait even three years to address the problem without having interference result in the death of a first-responder or a citizen. Today, an extension of two years or more is discussed in a matter-of-fact manner that belies the urgent need cited in the FCC's 2004 order.

There's plenty of blame to go around among all the players involved. But rather than pointing fingers, action needs to be taken by all involved parties to get this massive project on track (1) to resolve the interference and (2) so elected officials don't cite the rebanding experience as a reason to slam the door on other opportunities critical to public safety.

After all, at its core, rebanding is a public-private partnership that is supposed to meet a perceived need of public safety (in this case, alleviating interference) through a negotiated agreement between a commercial entity and a public-safety licensee -- the same formula touted as the way to provide a nationwide broadband network for public safety in the 700 MHz band.

Such negotiations in the rebanding process have been an abject failure, as few deals have occurred without mandatory mediation. For a commercial wireless carrier, 1.2% is an acceptable dropped-call rate; as a rate of completed deals -- as in NPSPAC Wave 3 -- 1.2% is a pathetic figure. It also should be a red flag to federal officials that negotiated deals between the vastly different public and private cultures are much easier said than done.

Thus, for Chairman Kevin Martin and the rest of the FCC, the next move is critical, and not just because of its impact on rebanding. Some FCC commissioners have said the agency should be actively involved if a public-private model is adopted for a nationwide broadband network.

If the FCC is too tough on Sprint Nextel in enforcing the rebanding agreement when the company claims that the delays have been beyond its control, would any commercial operator want to enter into a public-private partnership with public safety on a nationwide broadband network? On the other hand, if the FCC grants Sprint Nextel's requests for an effective extension without any penalty, public-safety entities justifiably would view any buildout requirements associated with such a network with skepticism.

Martin and his fellow commissioners have to walk a tightrope to satisfy everyone on this front, and they need to choose their direction sooner rather than later. Because, while there are many rebanding items in dispute, no one is arguing that interference in the 800 MHz band has been alleviated to date.

And that's what this was supposed to be about, right?

Nice article but not much fact checking, but then who fact checks in the media anymore, just ask Mike Wallace.

From that I am aware of, there are a number of systems in Georgia, South Florida, California and North Carolina as well as several refineries in Texas that are complete but again why bother to check, the story would not have had the same impact.

direction sooner rather than later. Because, while there are many
rebanding items in dispute, no one is arguing that interference in the
800 MHz band has been alleviated to date.

I work at CBS5 and am curious to the range of the wireless IFB system.
Conceivably, they can reach the trailer park at the SW corner of the
property, seeing that they're used for roof liveshots.

What was your location?
No problems intended, just wondering.

From: ftlaud_dj
Topic: 13704 Message: 13710

Jerry,

450.05 is a base station so this was not short range wireless PL or IFB, this was audio from master control with the program feed live on the UHF channel, I monitored this on I-10 from 67th ave all the way to Estrella. Typically I tend to scan the 450-451 and 455-456 band when I'm around town as well as checking the news helo's on 123.025 so that I know to avoid traffic jams due to police or fire activity. What I found nice about hearing the feed on .05 that day was something that I recall from living in Miami where ABC-10 WPLG broadcast their IFB and ENG all day long so that you can drive around town and hear the station, the only diff was during the newscasts you heard director que's calling out camera shots, VTR's and talent chatter, was a neat look at inside of a newscast.

Anyone have freqs for ABC15 / KNXV they seem to be the elusive ones on the list.

For their live control they have a streaming webcast during the shows you can hear the producers, ep's, and crew talk and see them in their control room. It's on their site, pretty cool and original!

13712. Re: ENG Frequencies

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-05-06 06:57:50 UTC
From: ftlaud_dj
Topic: 13704 Message: 13712

They are not allusive they are actually not licenses for any RPU (Remote Pick Up) frequencies, that would mean they Nextel & Text Message their crews for stories and they run IFB and PL on the microwave back haul from the remote truck.

13713. Local Radio & TV RPU (Remote Pick Up) Listing

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-05-06 07:22:03 UTC
From: ftlaud_dj
Topic: 13713 Message: 13713

I had a few minutes and pulled license data from the FCC for all local TV and Radio stations and the sub-licenses that they have allocated to them. This by no means is nearly complete but if you want to listen to Live and Late Breaking News or just fix the broken news, these should all be good frequencies as they are all showing as ACTIVE in the FCC ULS.

Since this format does not convert well to Yahoo Mail I have also uploaded a copy to the files section.

Well, I found out that the RS scanner wasn't picking up the control frequencies. So I switched scanners and now I can recieve the Trunking fine. Not sure what the problem is with the Pro-2051 but I do not here a data stream when I turn the trunking mode.

If noone knows, you may have to inquire directly to the city (sometimes the cities are very helpful, Peoria
responded via email with their freqs no questions asked when I was a newbie to scanners), or you might
have to query the FCC Database or call the FCC for them.

Just so you have at least a little recourse ;)

Chris

Not sure if the information below is accurate - but...

According to the link below, the "City of Maricopa" has contracted
with the Pinal County Sheriff's Department for the provision of
Police Services.

http://www.cityofmaricopa.net/Police.htm

I'd start off trying the frequencies listed at The Radio Reference
web site for them -

http://www.radioreference.com/modules.php?name=RR&ctid=104

Don't forget MCSO as well -

http://www.radioreference.com/modules.php?name=RR&sid=848

Karl,
Will Maricopa Police units be dispatched on the Pinal County Sheriffs Office CH 1 (158.760). CH 2 (158.895), or perhaps on CH 3 (158.790)? Personally, this is disappointing to learn dispatch will be through the Sheriffs Office. I was very much in hopes they would have their own dispatch center and frequencies.

It is my understanding that the City of Maricopa (Fire) applied for a VHF frequency from the Arizona Regional Radio Coordinator last year and was turned down, since there were none available. Now Mesa apparently has given up 6 VHF frequencies, so hopefully Maricopa is on the ball and applying for some now?

Maricopa PD is planning to roll out just a day shift at first, with Pinal County SO still covering the other two "in city" shifts each day. PCSO will maintain their office and regular "county" patrols regardless. It is uncertain when the MPD will cover the city full time. When I first looked at the MPD study and powerpoints, it did seem kind of odd that there was no monies for dispatch positions, etc. I believe there was a records clerk position.

There has been a subcommittee formed to study the formation of a joint dispatch center for Fire and Police, but until more revenue starts coming in from wherever, that will be put off into the future. They were planning to use developer fees from all the housing that was going to be built...but that is on hold for now.

Also, somewhat related...I am told that some Goodyear Fire units have been seen lately in Maricopa...not sure if they are just getting supplies or quartering with 574s. (Goodyear FD B187 was at Bashas last night) Goodyear is annexing down to the Maricopa/Pinal County line west of town, and GFD is now covering the area with overtime firefighters. (A two man squad, paid for by the master developer) When the 500th structure is permitted, then the developer must deliver a station in Mobile, AZ.

I guess the City of Maricopa is still trying to figure out what they will need, with eventual mutual aid agreements with Goodyear, Gila River, Casa Grande on three sides (eventually when Maricopa and Casa Grande's borders meet)

They only have 18 employees in the communications area (including supervisors), and they all are cross-trained so they work all positions [911 and Crime Stop (desk), and dispatch (radio)]. I took the "Radio" class taught by a supervisor last night that they offer to the Posse members. Pretty interesting.

13733. Mesa Info

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-05-28 02:10:23 UTC
From: n9myc
Topic: 13733 Message: 13733

Greetings,

I just joined this group. I live in Chicago and I'm a member of a similar Yahoo list group, CARMA (Chicago Area radio Monitoring Assoc.). I'll be visiting Mesa later this summer. I'm looking for info (freqs, talk groups, etc) for the truncked digital system in use in Mesa and Phoenix for PD and FD. Is that info located anywhere in the files section of this group or can somebody point me in the right direction?

Thanks in advance.
John-N9MYC

13734. Avondale PD freqs?

Yahoo group: ArizonaScanner (2007 — 2012)

From: David
Topic: 13689 Message: 13742

To the list as I don't think this was answered. My brother in law
who is on the job in Phoenix says the 2 Paradise Valley stations
will be numbered in the 90's. One will be 92, but he wasn't sure on
the other. At the start up July 1, they will have at least 2 engines
and a tanker there, but other apparatus could/would be moved there.

Does anyone know what PV's Fire stations #'s are going to be
when PHX Fire takes them over ? 50's or 60's I think. Rumor is ALF
pumpers
just like all the other PhxFD rigs and a tanker or 2. Look for Phx
to move some
trucks around as well.

For those that haven't heard,

Today Phoenix Fire Dept 16 year veteran Engineer Mark Carter from Eng 37 (Sta37 is at 40th St & Bell Rd -North east Phx) collapsed from an unknown medical condition while at a restaurant. Not sure what the crew was there for. The crew attempted CPR, transported to Mayo Hospital where he was pronounced dead.

He was a great guy!!! We'll miss him.

Some other 6 meter repeaters Phoenix to Northern Az..

Pinal Peak (Globe AZ.) : 927.8375/ 902.8375 ctcss 151.4 hz

Usery Mtn: 927.4625/ 902.4625 ctcss 151.4 hz

Yuma: 927.4625/ 902.4625 ctcss 88.5 hz

South Scottsdale/General dynamics plant: 927.3875/ 902.3875 ctcss
151.4 linked to 147.34 MHz

North Scottsdale: 927.1625/ 902.1625 ctcss 151.4

Prescott P Mtn: 927.3875/ 902.3875 ctcss 151.4 EL ~6200 feet

Prescott, Juniper Ridge: 927.6125/ 902.6125 ctcss 151.5 linked to 6
meter FM EL 5800 Feet

Flagstaff Mt. Eldon: 927.8375/ 902.8375 151.4 hz

There Used to be a 927.3375/ 902.3375 ctcss 151.4 on White Tanks but
I'm not sure if it's still on the air ?

Mike

If you are using the 396 or 996 program these in as Mot type 2 not as P25. I can pick up this system in the freqs I gave you in Surprise, Whitman, El Mirage , Avondale, Goodyear just about everywhere on the west side of the valley all the way down on !6th street and Buckeye in Phoenix, and in Buckeye. You need to program in those freqs then the talk groups and set it to scan.

Mike

I listen to the simulcast on 425.750 @ my house in Avondale, AZ. That
is the only freq. I have been able to hear any NASA info on. If
anyone else has any other freq's please provide. Hope this helps

Steve

Well, I live in Avondale, here is what I currently use (Freq's from ScannerStuff Phx/Tucson Metro Guide 9th Ed. Ltd excerpt from S.W. Freq. Dir). Note I have heard transmissions on all freq's, some more than others. Not sure if they switched to trunked or not. But, some are still using the freq's below. As I hear chatter/ roll call daily on some of them, so someone is still using them.

Note: Called Avondale PD tonight, they said they did switch over to the county trunked system. But they had no idea what the freq's or talk groups assigned to them were. They said call M.C.S.O. @ 602-876-1000. So I called MCSO, but the Radio shop was closed and Dispatch said even if I called back during normal business hours, that information was classified and that they would not release it. What bunch of crap is that!! Well anyways, here is what the old freq's were, and what I still use. Hope this helps some. Take care & good luck.

Respectfully,
Steve

Not to change the subject here - but, is there a "best time" to monitor? I've had by Pro 95 locked in manual mode and haven't heard a thing on this frequency.

I'm in Chandler just below Tempe... Seems like I should be able to receive it.

I hear 441.1 loud&clear in Glendale and 425.75 Wide FM.
Sometimes one is on and the other is off and vice versa.
When they are both on together there is a 1-2 second delay between them. Discones at 40ft.

Where is the repeater located that is xmit' the 441.100 freq? Must be on the far east side. As I can not pick up anything on the freq. here in Avondale. As I stated earlier. The only freq. I pick up NASA simulcast on is the 425.7500. Maybe, there are other's around town, depending on location. Who knows? Anyway, that's my two cents worth.

Take care,
Steve

Hi Steve,

It's at Scottsdale Airpark and is owned by Jeff, W0NWA. I believe that the antenna is about 50' AGL, but I'm not surprised that you don't hear it. I hear it fine here in old Scottsdale, but the 425.75 signal is rough copy for me.

Avondale is app. 17miles SE of the "peaks" on White Tanks.
I am at 107th Ave&Camelback app. 1mile N of Avondale.
441.1 is S3 FB LC on a Diamond discone at 40 ft and S6 on my Diamond stick. Station rcvrs.
396T OK on these antennas but nothing on stok antenna outside at gnd level.
STEVE try an oudoor, higher ant.

Hi Steve,

It's at Scottsdale Airpark and is owned by Jeff, W0NWA. I believe
that the antenna is about 50' AGL, but I'm not surprised that you
don't hear it. I hear it fine here in old Scottsdale, but the 425.75
signal is rough copy for me.

I'm curious to the origin of the 425.75 MHz frequency? That's obviously not an amateur radio repeater.

Donnie,

Excuse my ignorance on this but is this going to end up something like Colorado's massive state-wide trunking system or something just to support interoperability among the various agencies?

13779. "CNN Helicopter" gone digital??

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-06-18 02:31:01 UTC
From: Pal
Topic: 13779 Message: 13779

I bought a Pro-97 scanner about 6 weeks ago and used to listen to the "CNN Helicopter" (label from radioreference.com), which I believe is Channel 3 News chopper. Saved my butt a few times on my commute from Avondale to Tempe. However, I believe they've switched to digital. Can anyone confirm this? Or are they on a different (hopefully analog) channel now?

Thanks,
Pal

Not that I've noticed, been hearing them as well as all the other valley copters on 123.025AM and these should be the active freqs for TV3.

KTVK TV 3 RP-RPU 455.9900
KTVK TV 3 RP-RPU 450.3500 455.3500
KTVK TV 3 RP-RPU 450.1875 455.1875
KTVK TV 3 RP-RPU 161.7300

I posted a list of all the RPU freqs a few weeks ago, check the files section here on the list server.

Thank you for the reply. I should have been more specific. I used to listen to TV3 chopper on this freq. you mentioned:

KTVK TV 3 RP-RPU 161.7300

I haven't heard anything on that freq. for weeks now. It seems to have been abandoned, which is the main reason for my post.

Thank you for the files pointer. There seems to be plenty of good stuff in there.

Regards,
Pal

Just so noone thinks I'm nuts, I heard transmissions on 171.7300 this morning during my drive to work. Someone asked the chopper if he was on analog or digital. I guess they were having probs with digital so they used analog as a fallback today.

Sigh. I might have to sell my brand new Pro-97 and grab a digital scanner..

Cheers,
Pal

They were likely refering to the microwave transmitter for the video downlink. KTVK is installing a new HD digital/analog pod on NewsChopper3 and they may have beem testing modes.

Something to remember as well, the producer can talk to the helicopter over a subcarrier audio signal over the broadcast channel and the helicopter can be talking to the producer over the microwave link and nothing will be heard over the 171.3 frequency. There are numerous combinations they can use that may or may not use the 171.3 channel.

You can also find Bruce chatting with Detour Dan sometimes as well, Bruce talks to Dan on 171.3 and Dan talks to Bruce on 450 MHz channel. Strange to hear them talking to themself unless you have both on. I know it drives the producer nuts too. :)

I'll monitor on Monday morning but are you sure that they weren't talking about the downlink or the new HD Camera they just installed in their ship? They might be calling non-HD analog and HD Digital, just a thought.

Blaine,

I'm not sure it really was Forestry helos. I mentioned the Forest Fire activity only because that's what I usually here on this frequency. That's why it struck me as odd.

I did pickup that they were going to Blythe and another in a "407" all the way to "LA", as in Los Angeles. I just didn't get enough to ID who they were, but the base here was definitely listening to the aircraft on the local TRACON frequency.

I should have looked up the Atlantic reference, makes sense.

I'm still guessing that it might be the other guys...

I'm keeping a close ear to it now :)

Thanks FLANO.

Perhaps it was Forestry helos
enroute to your location. Interesting that they didn't
just use 122.75 or some other rarely used unicom
for a/a, like 123.45. We get a lot of State Forestry
action down here, but hardly any in the way of USFS
stuff. Just not enough "forestry" and mountains down
here, at least around DFW. Most of our stuff is
grassland brush fires. BUT, they can get immense.
Luckily, most cities and counties have a good plan of
action.

> On the Tucson tower frequency they
> were to go to "Atlantic".

There is an Atlantic Air FBO on the field according
to Airnav.

It's the same nationwide, however the majority of the country calls it
MA Calling, MA Tac 1, Tac 2 etc or I-Call, I-Tac1 etc.

There is a more official name for the Interoperability channels, as of
the 2007 meeting of NPSTC (National Pubulic Safety Telecommunications
Council) standard names were adopted for all Interop Channels on all
bands of the spectrum including 800mhz. The national tacs were
officially named, 8Call90, 8Tac91, 8Tac92 etc., there is a breakdown
for the 'rhyme and reason' of the channel naming in the doc linked
below, either way the freq are:

Calling 866.0125
Tac 1 866.5125
Tac 2 867.0125
Tac 3 867.5125
Tac 4 868.0125

These channels will move down 15mhz after rebanding. The report can be
found here:

http://www.npstc.org/meetings/IO-0060B-20070612%20Standard%20Channel%20Nomenclature.pdf

Hello everyone, someone stole my face plate to the Kenwood D-700 last night. somehow they got the garage door open. opened the passenger side of the car. glove compartment was left open, passenger side door was left open, only face plate was missing but the radio under the seat was still there.

keep your eyes open for someone trying to pass off a face plate for the Kenwood D-700

I'm trying not to be the annoying newbie. I suppose there is so much hardware on those choppers they could have been talking about something besides their 2-way equipment. I just thought it was odd the channel went silent for about 2 weeks, then I mentioned here, and they start talking on it again! Maybe the pilot or the producer girl was on vacation?

Thanks,
Pal

I have a Radio Shack Pro-43 scanner that I don't use any more. I would be willing to give this scanner to anyone that can show me how to get my Uniden BCD996T scanner to receive Mesa PD as good as my old Pro-43 would do. I have had my BCD996T since they came out. When I listen to it I get frustrated and shut it off. I have tried and so far I can't receive Mesa PD without all the burps and cutouts and robot sounding talk. Is it possible my Uniden will ever sound as good as my old Pro-43? All I want to do is listen to Mesa PD & fire. Seriously, anyone interested?

Just an idea before I sell the uniden,

Dale - Mesa

I'm in Gilbert and had a similar problem (Gilbert uses the same system). I found that it helped tremendously to loosen the squelch.

Are you sure you're not listening to the wrong tower (one that is too far away from your location)?

Hi Jon,
Thanks for the input. It has been a long time since I have even
tried to listen to it. I'm going to have to relearn how to program
it. Right now I'm not sure which tower I'm listening to. I think it
has several programed into it.

I have tried putting the squelch in several different positions but
it didn't seem to change much.

I also put an antenna on the roof from Radio Shack but that didn't
help either.

The next thing to try would be to play around with the P25 threshold levels. Normally the P25 threshold level is "auto," which means it adjusts as it receives a P25 signal. By adjusting the levels yourself you can give it a helping hand and hopefully reduce the error rate (which is causing the digitized audio). When you get it programmed again (just put in the tower nearest you) check the manual for the procedure for manually adjusting the P25 threshold levels. You can save the manual threshold with the system so you don't have to do it every time.

Dale,

Which antenna did you get from RS?

What coax are you using?

How high is the Antenna?

Have you tried doing a search range with the freqs you need with Control Channel on? To see if you can pick it up?

May be you need to get a Yagi and rotor so that you can point it directly at the site needed? (this mite be your best bet if you are having distance problems)

Also to let you know GRE is due out with a new digital hand held and base unit in October 2007 supposedly with most of the features the 996 has. From what I have seen the GRE past units are more sensitive but more susceptible to intermod .not that the 996 doesn't have it in the VHF range.

Hi Mike,
I have the cheap antenna from RS, its a model 20-176 ($29.99)

Coax is RG-58/U

The antenna is on a mast about 15 higher than the roof

Not sure what you mean by doing a search range with control channel
on?

The signal bars look to be strong so I dont think its a reception or
distance problem?, but I'm no expert.

Also, Not sure what GRE is?

Thanks a bunch for your reply,.

Make sure none of the ctcss feature is set to on in there.

I use the 20-176 and it does a good job for me.

Set up your custom search range to search the freqs you need. Make sure the ctcss is off. Try it with the ATT feature on and off.

First off, I would throw away the RG-58 coax. You are most likely loosing at least 50% of your signal in the coax at frequencies that high. I would run either Belden 9913 or LMR400. I use Series 400 cable from JEFA Tech (http://www.jefatech.com/category/d100.wbc400/) and it's only .43 per foot and they will sell you the amount you need, no need to buy 50 feet or 100 feet if you don't need that much. It is the same size as RG-8 and uses standard PL259 connectors. Very little loss with this cable.

That I would bet would fix your problem, along with monitoring the closest tower.

Good luck ...

Mike

All we have been hearing about down here is the new multi-million dollar traffic control center that is going to help control the traffic during the I10 widening project. Anybody know of any freqs they use to talk to DPS, tow-trucks, etc?

Thanks

In the briefings they said it was all being done by telephone to the various dispatch centers who would then communicate on normal radio frequencies to the units in the field.

From my understanding there are no radio frequencies affiliated with the new center.

You still need a digital scanner to decode the major sheriff's channels because they are Project 25 audio even though the system itself isn't digital.

For those wondering from the past, Phoenix Fire Dept is now operating in Paradise Valley. Stations 91 & 92 are in service and they have 2 engines, 1 brush and 1 tanker there so far.

PMT ambulance is the 911 ambulance there.

The American LaFrance pumpers although red and say Phoenix Fire Dept on them, if you see them on the road, look carefully at the engineer and Capt's doors to see the PV town emblem.?

For Sale
I ship UPS ground to 48 states.
Shipping your choice, at your expense.

Radio Shack Pro2055
Triple Trunking plus UHF aero
Excellent condition
$100.00 includes UPS ground shipping

Icom R2
pretty much DC to Daylight
Canadian version
Very good condition
$100.00 includes UPS ground shipping

Icom R5
Excellent condition
$100.00 includes UPS ground shipping

Radio Shack Pro2005 with OPTO Lite board
Overall, good condition.
Backlight is VERY dim. But, with computer control, that is not an issue.
I removed the power supply years ago to reduce heat from being run 24/7.
I have the power supply if you want it. Or I will include a 12v ac
wall adapter.
$100.00 includes UPS ground shipping

13826. Re: Tempe Town lake

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-07-04 19:52:57 UTC
From: Joe Badura
Topic: 13818 Message: 13826

All of the Tempe City traffic will likely be on the Tempe City
Trunked system. Info for this system can be found on page 110 of the
Southwest frequency guide.

I have been hearing a lot of traffic today on:
1E - Mill Avenue (TG 33744)
1H - Traffic (TG 33840)

There are also event channels on this system, but I have never heard
them active. Keep your scanner in search mode on this system to
catch everything.

For the fireworks, scan Itenerant, Common Low-Power Business, and FRS
frequencies. These can be found on page 241. The fireworks crew may
use radios on these frequencies.

Have fun, and be safe.

Which scanner to buy will depend on if MCSO is the ONLY agency that is digital that you want to monitor. MCSO is a hybrid digital system using a 3600 buad control channel. As such it has both digital and analog talkgroups. Most talkgroups for MCSO are digital while most other talkgroups are analog mode. The analog talkgroups are non law enforcement county agencies, Scottsdale PD and others.

Currently the digital capable scanners out there are as follows:

Unuden:

Bearcat 785 Mobile/Base (requires seperate digital card) 3600 buad only
Bearcat 250 Handheld (requires seperate digital card) 3600 buad only
Bearcat 796 Mobile/base 3600 & 9600 buad
Bearcat 296 Handheld 3600 & 9600 buad
Bearcat 996 Mobile/base 3600 & 9600 buad
Bearcat 396 Handheld 3600 & 9600 buad

Radio Shack

Realistic PRO-96 handheld 3600 & 9600 buad
Realistic PRO-2096 base/mobile 3600 & 9600 buad

The Bearcat 250 and 785 are great units that will receive the MCSO system very well. Since they are 3600 buad capable only and older units they can usually be found for much less on the used market than the newer units. That being said, the newer radios have many more features than the 250 & 785. Also considering your location, I would guess that Mesa and Gilbert may be other agencies that you may want to listen to as well, so the 366/9600 capable receivers will be the better choices.

I have 5 of the 8 receivers listed, lacking the PRO-96, Bearcat 785 & Bearcat 796. I prefer the Bearcat 996 over all of the others, with the Bearcat 396 running a close second. I use all of the receivers in various ways with the older Bearcat 250 relagated to more or less MCSO & Scottsdale PD only.

If you are only going to have one receiver, I would go for the 996 or 396 depending on your preference to handheld or base/mobile.

As for Tower for best reception in your area, I would go for Thompson Peak.

No. If you want to listen to an all-digital system you're going to have
to spend about that much to be able to do so.

The slightly earlier post I've provided a quick way to jump to has a comprehensive list of scanners that can do P25 digital. For Phoenix PD, remove the Uniden 250 and 785 model number scanners, they only will help with agencies using the County system. Cost is about the same unless you can find something used for less.

Look for the BC296D, BC796D you can find these for around $300.00 same with the pro-96. And BCD396, BCD996. Look on radioreference.com and eBay every once in a while you will find a good deal.

Well thanks you guys. I will keep a look out for a cheaper one.
$500.00 is just out of my price range right now. I got my dinosaur
old handheld one to work last night for Peoria PD and Phoenix FD.
I've forgotten half my codes, time to pull the old sheet out and do a
refresher of them all.

Topic: 13833 Message: 13842

Your best bet is to wait until the PRO 96 goes on sale (every few months) for $399. You will need a digital scanner, and they won't be cheap. On the flip side, everything is either digital, or going to digital, so if you want to scan, you need to buy a digital scanner. Do what I did, take a deep breath, and do it. It only hurts once, when you take your wallet out. I spent over $500 on a bcd396, which is a bit more advanced unit than the 96. Keep in mind that the 96 is a slightly more sensitive unit though, but for monitoring PPD that won't matter, the signal is strong if you are in Phoenix, or near it.

Be warned, monitoring PPD is frustrating at first. Something about multiple broadcast sites causes the reception to cut out quite a bit, on ANY scanner. Glendale and MCSO will work great though, and a lot of interesting things happen on their channels. Phoenix fire will be switching in a year or so too. DPS has a few years to go before switching. Even aircraft traffic will be going digital in the coming years (with a format that no current scanner will pick up - thanks war on terror). Conventional scanners are going to be expensive paperweights in a few years, don't bother buying one. Digital scanners ARE JUST NOT GETTING CHEAPER, unlike all other electronic devices. The demand is obviously VERY strong. I know many in law enforcement, who may overlap juristictions with other agencies, use scanners to keep an ear on the traffic of other agencies. Also, media types are more than willing to pay $500 for the ability to get the jump on a story, especially when all of their competitors have one. My two cents.

13850. 396 as a race scanner

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-07-19 05:30:43 UTC
From: Mark West
Topic: 13850 Message: 13850

Just curious if anyone has used the 396 as a race scanner at any of the Nascar events and if so how it worked out.

I am finally going the to the track in November and am wondering if I should bring my 396 or opt for something a little less complicated with me.

Also, who covers law enforcement, fire and EMS while an event is going on there.

Thanks

Mark

Thats not "Really" DOS thought.
Thats just using the windows "Console" and some DOS programs are picky.
He really needs to boot using a DOS bootable disk or CD-ROM.

13853. FD Maricopa and Phoenix Fire Dispatch Part 2

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-07-21 02:35:10 UTC
From: gemcohauler
Topic: 13718 Message: 13853

If you take a look at the latest City Council minutes, you will see that they discussed FD Maricopa signing with Phoenix Fire Dispatch for a dispatching agreement, and some type of mutual aid agreements.

A friend told me that they would be dispatched, and they would use their current frequency as a tactical, but control of the frequency may be handed over to Phoenix Fire? Supposedly, the Mutual Aid agreement has to do with the new Goodyear annexation in Mobile (west of town), and with Gila River covering the 347 up to the Chandler line.

It was supposed to start July 15th, but now the start date is August 1st. If I learn more, I will post it to this list.

http://www.cityofmaricopa.net/city_clerk/CouncilActions07-17-07.doc

City Council Minutes, items 8.5 and 8.6

13854. Maricopa PD & New Dispatch Frequency ???

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-07-21 04:35:17 UTC
From: John Timmons
Topic: 13854 Message: 13854

On July 1 or 2, the City of Maricopa's Police Department officially began operations with a dayshift. The second and third shifts will still be covered by the Pinal County Sheriffs Office until such time as the Maricopa Police Department can staff the two additional shifts. Currently the Department uses the Sheriffs Office CH 1 (158.760 Mhz.) for communications.

In a recent local newspaper article concerning the Maricopa PD, it stated, "The Maricopa Ploice Department is working with the Pinal County Sheriff's Office to have its own dispatch channel..... Maricopa PD Chief Patrick Melvin said his department will begin staffing its own dispatchers which will be ready by August 5". DOES ANYONE KNOW WHAT FREQUENCY THE DEPARTMENT MAY ULTIMATELY USE??? I would surmise it will be a little used SO frequency.

John N7LQR
Maricopa, AZ

**Intergovernmental Agreement. The City Council shall discuss and possibly take action on approving a request by Fire Chief William Kelleher to approve an Intergovernmental Agreement with Phoenix Fire Department Regional Dispatch System for basic dispatch services. Discussion and Action

8.1
**Mutual Aid Agreement. The City Council shall discuss and possibly take action on approving a request by Fire Chief William Kelleher to approve a Mutual Aid Agreement with various Fire Departments, Districts and Agencies throughout the State of Arizona to provide for mutual assistance for fires and other types of emergency incidents
ok..i don't see anything else here.Gila river EMS and FD cover 347 from price rd to maricopa. that's not new.FYI-Gila River will NEVER be dispatched by PFD.It will always be by GRPD.FDM is getting its in by goodyer,as mentioned.

13858. Re: [ArizonaScanner.com] 396 as a race scanner

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-07-22 02:18:18 UTC
From: Roy Schahrer
Topic: 13850 Message: 13858

I used my 296 at last years race and it worked great. Depending on how much work you wanted to go through in setting up your programming you could up a system for each car and select/deselect that car with ijust a few keystrokes. I found that the best listening was on the track safety channels though.

Topic: 13855 Message: 13863

Did Gila River respond to the PCSO deputy tazing the MFD firefighter on Friday night?

http://www.85239.com/FORUM/tabid/60/forumid/12/postid/11795/view/topic/Default.aspx

from 85239.com

Fire Department Maricopa now part of Regional Dispatch System
Maricopa's Fire Department is now part of the Phoenix Fire Department's Regional Dispatch System. The service provides fire and emergency medical dispatching services for 20 jurisdictions directly and three entities indirectly, including the Ak-Chin and Gila River communities. It covers 2,200 square miles and receives over 750,000 calls per year.

Ron Burch of the Phoenix Fire Department Tech Service was at last week's city council meeting to explain the service and the dispatch process. "This erases jurisdictional boundaries and ensures the highest level of care," he said.

The dispatch center utilizes a Computer Aided Dispatch (CAD), which reduces response time and ultimately saves lives. Personnel are on duty 24 hours a day, seven days a week; all are EMD certified and able to provide self-help instructions to callers as needed.

"It is difficult in a short statement to explain properly the overall importance of the Regional Dispatch System and Automatic Aid to the citizens of the City of Maricopa. Suffice to say it will greatly enhance the overall efficiency of our Fire Department and thereby increase the safety of everyone who lives in the City. It is a major step forward for the Department and the City," Fire Chief William Kelleher told 85239.

How will the system work for Maricopans? When an individual dials 911 to report an emergency, the call will go first to local law enforcement. If fire and/or medical services are required, that agency transfers the call to the dispatch center where the CAD system takes over. This is accomplished within seconds.

CAD knows where every piece of equipment is located at all times, using global positioning technology (Automatic Vehicle Location or AVL). The closest unit is dispatched.

For example, if the incident taker receives a drowning call, he or she can reassure the individual on the phone that the responding unit

is a mile away, then half a mile, and so on.

Additionally, the dispatch center uses 241 "nature" codes to define the exact nature of the emergency, bringing in the most appropriate services needed. Nature codes include, for example, "dog bites, structure fires, difficulty breathing, drowning, gunshot wounds and altered states of consciousness," according to the dispatch center.

According to Kelleher, being part of the Phoenix Regional Dispatch System and in partnership with major fire departments in Arizona is another step toward achieving excellence as a department. He publicly credited Assistant Chief Wade Brannon as "the brains of this."

Providing the "absolute best customer service and care" is the goal of the dispatch center. Vice-Mayor Brent Murphree thanked Kelleher and the department for taking the initiative to become part of the Phoenix Regional Dispatch System.

"It solves a great problem we have here in Maricopa," Murphree said.

Does anyone have updated locations/address's for Southwest ambulance around the Phoenix area? I am looking to also find out where some of the new Braun ambos are located as well as the station that is supposed to be located near 56th Dr & Glendale.

Thanks
David Greenberg

13867. ICP Monthly Scanner Get Together, 7/28/2007, 6:00 pm

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-07-28 00:00:19 UTC
From: ArizonaScanner@yahoogroups.com
Topic: 13857 Message: 13867

Reminder from: ArizonaScanner Yahoo! Group
http://groups.yahoo.com/group/ArizonaScanner/cal

ICP Monthly Scanner Get Together
Saturday July 28, 2007
6:00 pm - 9:00 pm
(This event repeats every month on the last Saturday.)
Location: Fuddruckers - The Worlds Greatest Hamburger
Street: 1928 E Highland Ave
City State Zip: Phoenix, AZ 85016

Notes:
Join Phoenix & sourrounding area scanner enthusiests for dinner. There are people with the latest & greatest scanners who will offer programming help & ideas.

Fuddruckers is located in the Camelback Colonnade on Highland just north east of the 51 Freeway.

More information is located @ WWW.ICP-AZ.ORG

13868. Is anyone awake ???

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-07-28 15:41:59 UTC
From: ftlaud_dj
Topic: 13868 Message: 13868

The biggest story of this year hits close to home, every radio band is insane with activity and not one post about the copter crash or the chase or the bevy of activity that followed?

I've been on other yahoo groups in other parts of the country and if a cop sneezes it's all over the yahoo group.

Really lackluster for a group about scanning and monitoring.

13869. Phoenix 911

Yahoo group: ArizonaScanner (2007 — 2012)

From: Jason McDowell
Topic: 13869 Message: 13869

Not sure if this is appropriate for this group or not but thought it might be useful to someone on the list. I just saw on azfamily.com I think it was last night about Phoenix 911's upgrades going on. They said they will be hiring a bunch of new 911 call takers once the 1st phase is done at end of August and when its fully done by end of year. The story was about how people have to wait a few minutes when calling 911 because of the lack of 911 call takers that are available due to the upgrades going on. Just an FYI to keep an eye on Phoenix cities website if your interested in applying.

Jason

There have been a few responses. But, what does one say when such a tragic lose has just hit home. Too many people are still in a state of shock, I would presume.

Notification of the event occurred elsewhere. Those interested knew where to go to follow the activity. A cop sneezing doesn't command much respect with regard to smearing traffic all over the net. The loss of life of four highly respected media personnel deserves reservation & respect. May they rest in peace. They will be missed by many.

I have not had the scanner on much and it was odd that I was not watching 3TV after noon news at that time. I had some one who stopped in and tell me about it. That was 3 or so hours later.

The 1 question I do have is about the dedicated helicopter frequency that I have been hearin all about, what is it any one else listen to it?

It's just a strange thing going on now.

From: Michael Hamann
Topic: 13868 Message: 13873

My apologies for not posting a list of frequencies during the event, but a few of us active folks lost some close friends in the accident. For some reason posting frequencies on this community was not the first thing that came to mind.

Phoenix FD utilized Ch5 153.830
Phoenix PD utilized C8 TG/2960 for the pursuit and resulting helicopter accident
Phoenix PD then utilized C7 TG/2961 for the barricade situation
Helicopter air-to-air is typically 123.025

God bless Scott, Jim, Rick, and Craig.

With all due respect, I started my broadcast career working for Metro Traffic Networks so in my case it may hit a little closer to home than most, none the less, this list server group is supposed to be about scanning, radio, monitoring etc, I know that by it's own mission statement on the main page it's not for breaking news, but in the last week there have been 3 major events in the Phoenix Metro that have made national news, and not one was even hinted at here on the group? I just think that with 1500 members there would be a little more interaction.

That's not really news. PD has been short-staffed for a decade or more, and the Phoenix FD Alarm Room is barely over 50% of what it should be staffed with. By the time either department hires and trains a new class (class sizes have to be kept small), the call volume has increased the need for yet more dispatchers. It's a losing battle that yields just enough people to keep the staffing levels way below what they should be, and we won't even talk about the interference from City Hall (speaking generically).

I think the new "upgrades" they're referring to is the new user-UNfriendly phone system that I feel slows the entire call processing system down, causing unnecessary delays. Add that to the fact that practically every 9-1-1 center in the valley is understaffed, and it's a recipe for disaster.

Next episode: Upgrading the radio system from 154 MHz analog to 800 MHz digital. Yet another farce.

This is, of course, only my opinion.

Ed

You are right. There was nothing on this group about the news events in the Phoenix area. That is not what this group is about.

I was on-duty when the helicopter crash took place. It was a very stressful shift and I certainly didn't feel like posting any messages when I got home, and I don't think anyone else did either. When I got home, I turned off my pager and sent an email to those who might be likely to call that I didn't wanna be bothered, allowing me to leave the phone on, just in case

It might not be a bad idea for someone to start a group for breaking news in the valley but it would have to have some really good moderators to control what some people may think is breaking news, and others may not. The rules would have to be very specific and enforced by the moderators.

No need to cover somthing like this, it seems that it's all over the
place now. I only know of the one thing, I must be letting thing
slide by, I'm not evan sure what the other 2 things are.

evan people who do not know them are sad about this, just like me.

From: Danz, Dan
Topic: 13869 Message: 13879

That's PHOENIX PD 9-1-1 Jason is talking about .. but they are not the only 9-1-1 center in the valley. Here in Maricopa county, there are many PRIMARY Public Safety Answering Points (PSAPs). Phoenix PD is just one (probably the largest based on the number-of-calls and number of call-takers), but most of the calls they receive are only for emergencies within their jurisdiction.

Here's a brief look at how it works for those of you who are interested in the job, or for those of you who hear the calls on the radio and don't know how the information gets to the right radio dispatcher.

Elsewhere in the Valley of the Sun, the list of primary PSAPs includes:

* Apache Junction PD

* ASU PD

* Avondale PD

* Buckeye PD

* Chandler PD

* Chase Field Ball Park

* Capitol Police

* Ft McDowell Tribal PD

* Gila River Tribal PD

* Gilbert PD

* Glendale PD

* Goodyear PD

* Luke Air Force Base

* Mesa PD

* Paradise Valley PD

* Peoria PD

* Salt River Tribal PD

* Scottsdale PD

* Surprise PD

* Tempe PD

* Tolleson PD

* Wickenburg PD

* Maricopa County Sheriff's Office - which is primary for El Mirage, Fountain Hills, Gila Bend, Guadalupe, Litchfield Park, Queen Creek, Sun Lakes, Sun City, Sun City West, and Youngtown, as well as all unincorporated areas of the county, including the so-called county islands inside many of the other jurisdictions.

Redundant/fail-safe selective routers in the telephone network route calls from subscriber telephones in each area of jurisdiction to the primary PSAP for that location - if there is any doubt about jurisdiction, the call is routed to MCSO as the default PSAP for the county. With the explosive growth in the valley, the details are always changing - and it's a full time job for many people to manage the changes and ensure that the calls are routed correctly. Perhaps you've heard that there is a Maricopa County 9-1-1 organization, but they provide this kind of infrastructure support, not direct 9-1-1 call taking.

During periods of heavy overload or equipment outage, some centers can re-route calls to other Primary PSAPs.

Some but not all of the PSAPs front the calls with Automatic Call Distribution (ACD) units that provide announcements at busy times to assure callers that they have reached 9-1-1 and their call will be answered shortly by the next available operator. This can prevent hang-ups and redials, which further tax any center that is overloaded, because all abandoned or hang-up calls must be called back or officers dispatched to determine whether or not there is an emergency that couldn't be reported.

Some incidents, like freeway accidents or high visibility fires, generate a HUGE number of calls to 9-1-1. Sometimes, though, it's a single call that alerts authorities, so don't assume that somebody else will call. Just don't hang up if you don't get an immediate answer. And if you ever misdial 9-1-1 and realize it - don't hang up. The call will go through anyway. Stay on the line to tell the call taker you misdialed. You might even be questioned a bit to ensure you're not under duress when cancelling the call, as sometimes happens in domestic violence situations.

Many of the answering points are equipped with electronic mapping software that will interpret the Automatic Number Information and Automatic Location Information the Enhanced-911 provides and show the location on a digital map.

And every month, more and more wireless calls to 9-1-1 are showing up with accurate locations as more and more wireless providers supply the critical detailed information.

Fire department, EMS, and DPS/Highway patrol dispatch centers are SECONDARY PSAPs. Each call is answered first by a Primary PSAP to determine the nature of the emergency and then transferred to the secondary PSAP if a fire department, medical, or highway patrol response is required. Some entities, like Mesa Public Safety, Wickenburg, and the tribal agencies, operate combined Primary and Secondary PSAPs - while others operate split centers (like Phoenix). And of course, any city that participates in the Phoenix Regional Fire Dispatch scheme will transfer calls to that large 9-1-1 center for Fire and most EMS calls.

The EMS calls frequently require a specially skilled/trained 9-1-1 operator to give pre-arrival medical instructions to the callers - an area called Emergency Medical Dispatch (EMD). The split between primary and secondary PSAPs means that the EMD skills can be concentrated in the secondary PSAPs like Phoenix Regional Fire, Rural Metro, and Mesa/Gilbert Fire, instead of all the Primary PSAPs needing them.

Most 9-1-1 centers are always recruiting. In some centers, emergency and non-emergency call-taking is all you do. In others, you can rotate between radio dispatching and call taking. And in some, especially the smallest agencies, you might do both at the same time.

It's a rewarding job and can even be done in some centers on a part-time basis. If you're interested or just want to find out more about the job, contact any of the agencies I listed directly (on the NON emergency line - not by calling 9-1-1, please).

Not sure if this is appropriate for this group or not but thought it might be useful to someone on the list. I just saw on azfamily.com I think it was last night about Phoenix 911's upgrades going on. They said they will be hiring a bunch of new 911 call takers once the 1st phase is done at end of August and when its fully done by end of year. The story was about how people have to wait a few minutes when calling 911 because of the lack of 911 call takers that are available due to the upgrades going on. Just an FYI to keep an eye on Phoenix cities website if your interested in applying.

On Saturday, July 28 (a very hectic day in the valley of the sun), ftlaud_dj said:

The biggest story of this year hits close to home, every radio band is insane with activity and not one post about the copter crash or the chase or the bevy of activity that followed?

I've been on other yahoo groups in other parts of the country and if a cop sneezes it's all over the yahoo group.

Really lackluster for a group about scanning and monitoring.

Oh, Puleeze !!! This is not the group for breaking news. If you're not listening to your scanner, tough. Listen to your broadcast radio or television. Don't garbage up this news group with breaking news. And certainly never about a cop sneezing. There's too many of them being hurt or losing their lives. If that's news in other parts of the country, wonderful. Whatever floats your boat. Subscribe to those groups.

I subscribe to the digest version of ArizonaScanner ; the last thing I want to read is a collection of old news. That's what the newspaper is for. This group is to help you use your scanner and to understand what you're hearing. Not to tell you that you should go turn on your scanner because you're missing some good stuff.

If you want a group for breaking news in Phoenix, start a new one - don't assume that ArizonaScanner is the group.

If you're really interested in notification of news events, check out Incident Command Page of Arizona where - like the news organizations - you can pay for the service of somebody else listening to the scanner for you. I can assure you that they made plenty of notifications about the pursuit and the helo crash and the young cop who was killed later that same day, despite losing some good friends.

Dan,

1 - Is there anyone in your shop assigned to "intelligence"? i.e.
Maintaining street files, maps, response information etc?

2- I thought the El Mirage contract went away on the 31st? Is the "local" PD
on the SO 800 system? And Youngtown? I thought Litchfield Park contracted
with Avondale? Thanks.

"Danz, Dan" <Dan.Danz@...> wrote:
That's PHOENIX PD 9-1-1 Jason is talking about .. but they are not the only 9-1-1 center in the valley. Here in Maricopa county, there are many PRIMARY Public Safety Answering Points (PSAPs). Phoenix PD is just one (probably the largest based on the number-of-calls and number of call-takers), but most of the calls they receive are only for emergencies within their jurisdiction.

Here's a brief look at how it works for those of you who are interested in the job, or for those of you who hear the calls on the radio and don't know how the information gets to the right radio dispatcher.

Elsewhere in the Valley of the Sun, the list of primary PSAPs includes:

* Apache Junction PD

* ASU PD

* Avondale PD

* Buckeye PD

* Chandler PD

* Chase Field Ball Park

* Capitol Police

* Ft McDowell Tribal PD

* Gila River Tribal PD

* Gilbert PD

* Glendale PD

* Goodyear PD

* Luke Air Force Base

* Mesa PD

* Paradise Valley PD

* Peoria PD

* Salt River Tribal PD

* Scottsdale PD

* Surprise PD

* Tempe PD

* Tolleson PD

* Wickenburg PD

* Maricopa County Sheriff's Office - which is primary for El Mirage, Fountain Hills, Gila Bend, Guadalupe, Litchfield Park, Queen Creek, Sun Lakes, Sun City, Sun City West, and Youngtown, as well as all unincorporated areas of the county, including the so-called county islands inside many of the other jurisdictions.

Redundant/fail-safe selective routers in the telephone network route calls from subscriber telephones in each area of jurisdiction to the primary PSAP for that location - if there is any doubt about jurisdiction, the call is routed to MCSO as the default PSAP for the county. Ed

Good idea on creating a list for Breaking News.

Arizona Public Safety News Network is happy to host the group.

It can be subscribed to at http://groups.yahoo.com/group/ArizonaBreakingNews

We'll see where it takes us. You are correct that rules will need to be tight.

Figure it like this . if you don't think you will see it on the evening news, don't post it to the group.

If anyone is interested in helping out with the list please email me off this list.

Thanks!

Mike

Arizona Public Safety News Network.

Subject: Re: [ArizonaScanner.com] Is anyone awake ???

You are right. There was nothing on this group about the news events in the Phoenix area. That is not what this group is about.

I was on-duty when the helicopter crash took place. It was a very stressful shift and I certainly didn't feel like posting any messages when I got home,

and I don't think anyone else did either. When I got home, I turned off my pager and sent an email to those who might be likely to call that I didn't wanna be bothered, allowing me to leave the phone on, just in case

It might not be a bad idea for someone to start a group for breaking news in

the valley but it would have to have some really good moderators to control what some people may think is breaking news, and others may not. The rules would have to be very specific and enforced by the moderators.

13887. RE: [ArizonaScanner.com] 911 in the toilet

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-07-30 15:02:55 UTC
From: Danz, Dan
Topic: 13885 Message: 13887

I saw a newspaper article that said (paraphrasing) - the agency was staffed with 4 call takers and 1 overflow call taker. They received 11 calls about the fire.

Duh ... somebody's going to have to wait to get answered.

The house didn't burn to the ground because 911 didn't answer. PD was onscene within 2 minutes after the first call ...

The caller that was quoted in the article I saw actually contributed to her own delay. She hung up, then called back a 2nd time, and hung up, and then had to be called back by the 9-1-1 center.

A recording, in this case, would've assured her that she had reached 9-1-1.

I wonder if she had accurate information about the fire, or was just calling to see she saw smoke a block away.... You'd be surprised how many calls we get, AFTER the fire trucks are ON SCENE.....

Actually, I think it's a lousy idea to try and use a
yahoo list for breaking news. I received your post
a little over 12 hrs after you posted.

Some kind of direct email list might be appropriate
or at least more appropriate, than a yahoo group which
may at times take 24 hrs or more to propogate to the
end user.

A 24 hr old piece of news is hardly breaking.

I would suggest that you then subscribe to breaking news service alerts from Incident Command Page (www.icp-az.org) or Arizona Public Safety News Network (www.apsn.us).

Both systems are available for a subscription service and provide direct alerts to any electronic address you choose.

There is a certain amount of cost to maintaining such systems, therefore both groups charge a small fee.

APSN Offers free service to anyone who is interested in actively dispatching for them.

>

When I'm at work, a Fry's food store at 43rd and Northern on the Glendale-Phoenix border, if I need to call 9-1-1 on my cell, such as for a shoplifter, the first thing I say is "I need Glendale police at..." then the name of the store and the address. That way, if I ever do end up getting the Phoenix PSAP they know it's in Glendale. (I don't think it's ever been routed to Phoenix in the past, but I know it's a possibility.)

I've also had to report a couple of motor vehicle accidents on 43rd Ave south of Northern, and the double homicide (shooting) at the carwash across the street. I know that 43rd Ave itself is Phoenix jurisdiction, so I just state the nature of the emergency, then the location. ("I want to report an accident on 43rd Ave just south of Northern.")

I certainly can't help it that you don't monitor your email more closely. YahooGroups typically sends the messages out within minutes. There are times when they have technical difficulties, as do ISPs, and times are increased, but the paging systems also have down time or slow paging. If you want the closest thing to real-time, get a pager. If you want almost real-time, most of the time, join a YahooGroup. If you want true real-time, monitor the radio.

Although not perfect, it'll work most of the time, and it costs nothing, which is better than the pager options.

Ed

I suggest you're a little confused about how
Yahoo groups, or any email group, works.

I'll have to say that all emergency personnel and dispatchers are doing one heck of a job with this latest monsoon going thru in the last hour. Probably the 2nd busiest i've heard Phoenix area ever. The busiest was a couple summers ago when there was at least 7 working house fires at once during a monsoon.

I am strongly in the camp that agrees with the expressed intent of this group which directly states on the home page that this isn't the place for breaking news to be announced. For those who may have these messages individually sent to a separate email account, sure they would get (in most instances) fairly quick heads up messages. The other options for receiving this and other yahoo groups aren't very "immediate" friendly.

If you're subscribed to one email a day with the entire day's slug of messages it would be an annoying waste of time. If you go directly to the yahoo group to read message daily, or few times a week, etc., it also starts becoming a very inefficient medium.

I agree with the message on the home page that states there are many more effective ways of announcing "breaking news".

It sounds like a great idea to me. The latest list didn't seem to
cover anything that I'd be able to hear from my location, but who
knows what will be on the next list.

Thanks!

From: ftlaud_dj
Topic: 13903 Message: 13903

Radio friends, here's interesting article from today's Orlando Sentinel, a followup to the Phoenix midair crash of 2 news helos. And it's very unusual to see an actual radio frequency mentioned in a news article.

As Al Stern can attest, the air-air frequencies are very interesting monitoring when the TV news copters are operating, especially during a major news incident.

==========

OrlandoSentinel.com
For Central Florida TV-news copters, there's little room for error when
covering from air
An Arizona tragedy has stations thinking about the limited airspace they share.

Sarah Langbein
Sentinel Staff Writer
August 2, 2007

At any given time, four local-television helicopters can be chasing down breaking news in Orlando.

They were up there Wednesday, for example, when the Orange County Sheriff's Office nabbed a 15-year-old boy who they say stole a sport utility vehicle and terrorized streets for nearly two hours.

Soon, there will be a fifth TV copter in the mix. Add to that the craft
piloted by the Sheriff's Office, and the airspace over Orlando can get pretty crowded.

"In a coverage market of this size, oftentimes a helicopter is the only
way to reach an event in a timely fashion," said Robin Smythe, vice president and general manager of Central Florida News 13. "Also, there are stories that are best told with video you can only shoot from an aerial perspective."

Such was the case Wednesday.

So how do these stations navigate the skies safely and avoid collisions
like the one that claimed the lives of two news crews in Phoenix last week?

The answer is communication.

When WKMG-Channel 6 pilot Jan Daniels took to the sky Wednesday to track the driver of the stolen SUV, he radioed in his plans on a common
frequency, 123.025. The pilot of Chase 4, a Sheriff's Office helicopter, answered back.

Between the two, they agreed on positions. Daniels would fly at 1,000 feet, and the Sheriff's Office chopper would fly lower to gain the best
perspective of the unfolding and moving crime scene. There's an unwritten rule that says law-enforcement helicopters always have the right-of-way, said Capt. Randy McKendree of the Sheriff's Office aviation unit, whose crews typically fly at 600 to 800 feet.

But as the chaos moved closer to Orlando International Airport, each pilot had to call air-traffic control and get the OK to fly
into "class
B airspace," the area designated around airports.

By the time the driver -- whom the Sentinel is not identifying because of his age -- stopped, ditched the vehicle and ran from authorities, all four news helicopters were overhead. They coordinated their positions with the help of landmarks on the ground. Daniels hovered on the west side of the scene. The others flew to the north, south and east as the driverwas arrested and cuffed.

"We all kept talking and coordinating where we were working," Daniels said.

Having served in the military and flown a helicopter in Iraq, Daniels said his TV gig is pretty easy.

"No one's shooting at me," he remarked.

But he also has 23 years of experience as a pilot and the help of a cameraman working in his favor. Daniels' only objective is to fly.

Other stations, like WESH-Channel 2, employ a pilot/reporter -- an idea
that has its pluses and minuses.

On the positive side, personalities such as Chopper 2 pilot Dan McCarthy have become household names. Viewers often identify with the pilot/reporters, just as they would with anchors and reporters. Additionally, combining the two tasks can save stations money.

But juggling these duties also has its safety concerns. And in the case
of WESH, station managers are deferring judgment to McCarthy.

"Frankly, we allow our pilot to tell us what is and is not safe to do,"

WESH news director Barbara Maushard said. "If he can't safely talk to us, he tells us."

He has even done so on air, Maushard said.

Meanwhile in Arizona, members of the National Transportation Safety Board are investigating the crash that killed pilot Scott Bowerbank and
photographer Jim Cox of KTVK-Channel 3 and pilot Craig Smith and photographer Rick Krolak of KNXV-Channel 15. The two-person copter teams were following a car chase before the deadly midair collision.

The tragedy has raised concerns across the country, and certainly in newsrooms.

Locally, members of the Central Florida Helicopter Association -- comprised of medical, media and law-enforcement pilots -- plan to talk about the crash. And so will the employees of local television stations.

"Anytime something happens in the industry involving equipment like this, we think it's very important to apply some due diligence, review our procedures, to make sure our safety practices are the best they can
be," Channel 13's Smythe said.

13904. TEP Donation Improves Oro Valley Police Department□s Radio System

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-08-03 21:29:31 UTC
From: trunkh8er
Topic: 13904 Message: 13904

TUCSON, Ariz.--(BUSINESS WIRE)--Tucson Electric Power (TEP) is donating the use of a spare radio frequency to the Oro Valley Police Department (OVPD), which has operated for several years with only one primary frequency.

Use of the donated radio frequency will ease communication between dispatchers and officers in the field, OVPD Detective Gary Schmitz said. The agency had long sought to expand the capacity of its overburdened radio system, but other frequencies already were licensed to other local agencies.

"We've been looking for frequencies for probably the better part of three years, but we couldn't find anything," Schmitz said. "We're very grateful to TEP for supporting our operations with this invaluable contribution."

The frequency was made available by TEP's recent upgrade to a digital radio system that operates on the 800-megahertz (MHz) band. That left the company with limited use for the 450-MHz frequency it had used to send pager messages.

While TEP retains the license for the frequency, the company turned over its use to the Town of Oro Valley at no charge. OVPD began transmitting on the frequency several weeks ago.

"TEP has always maintained a strong relationship with local law enforcement agencies and the rest of our fellow first responders," said James S. Pignatelli, Chairman, President and CEO of TEP and its parent company, UniSource Energy Corporation (NYSE: UNS). "We hope this partnership will help Oro Valley Police Department officers better serve their growing community."

Use of the donated frequency will improve both the capacity and the reliability of OVPD's communications. The town operates its own frequency with an antenna mounted atop the police department's headquarters. If that equipment fails, OVPD could maintain communications on the new frequency using TEP's antenna, which is based in the nearby Tortolita Mountains.

Schmitz said radio traffic was "too much" for just one primary frequency, particularly during special events. "Now we're capable of using two primary frequencies," Schmitz said. "That's going to make a big difference for us."

Tucson Electric Power, a subsidiary of UniSource Energy (NYSE: UNS), provides safe, reliable electric service to nearly 395,000 customers in southern Arizona. For more information, visit TEP.com. For more

information about UniSource Energy, visit uns.com.

13905. Maricopa P.D. Frequency

Patrick,

You are going to need a Digital capable trunk tracker for Mesa-Mesa is using a P25 standard-if you buy an old scanner, chances are it won't cover this. You need one of the following; 296, 796, pro96, pro2096 or one of the newer offerings like the 396 or 996-Radio Shack is also comming out with a new one this fall. If you get a scanner that can copy Mesa, then Chandler and Tempe can also be monitored. The county of Maricopa uses a mix mode digital and analog system-any of the above mentioned will cover this also with no problem.

I'm sure you'll receive a wealth of opinions here about what to buy and what not to.

My best advice to you is to watch Ebay. One can get some really good deals there on good current equipment.

Patrick if you want to listen to those areas on your pc let me know because
I stream live on the internet of the following :Mesa fire and police,Phoenix
Police and fire, FBI,DEA,MCSO,State Police, Tonto NF, Skywarn radio and some
other goodies. Let me know if you would like the link to be able to listen
to my scanner.

Mark West <kd7lqw@yahoo. <mailto:kd7lqw%40yahoo.com> com> wrote: Patrick,

You are going to need a Digital capable trunk tracker for Mesa-Mesa
is using a P25 standard-if you buy an old scanner, chances are it
won't cover this. You need one of the following; 296, 796, pro96,
pro2096 or one of the newer offerings like the 396 or 996-Radio
Shack is also comming out with a new one this fall. If you get a
scanner that can copy Mesa, then Chandler and Tempe can also be
monitored. The county of Maricopa uses a mix mode digital and analog
system-any of the above mentioned will cover this also with no
problem.

I'm sure you'll receive a wealth of opinions here about what to buy
and what not to.

My best advice to you is to watch Ebay. One can get some really good
deals there on good current equipment.

It's actually GRE that will be coming out with the 1st of two new scanners (PSR-500) sometime this October, (PSR-600) later this year. Radio Shack (among other dealers) will be selling them. PSR-500 was type accepted by the FCC today I understand. Sounds like this will be an awesome handheld.

73,

Dave

NFL AND MOTOROLA UNVEIL NEW COMMUNICATION EQUIPMENT FOR 2007 SEASON AND BEYOND

New Motorola Headset Designs and Communication Center Part of Ongoing Initiative to Upgrade In-Game Communication throughout the League

SCHAUMBURG, Ill. - 10 Aug 2007 - This week's NFL pre-season games will be the first to feature two new innovations from the NFL and Motorola, Inc. (NYSE: MOT) developed to enhance sideline communication. The NFL and Motorola are unveiling newly designed Coaches Headsets and Sideline Communication Centers during preseason games across the League. The two initiatives are part of an ongoing collaboration between the NFL and Motorola to upgrade in-game communication systems and capabilities.

The new headsets are lighter, thinner and more ergonomically advanced in comparison to their predecessors. The series of headsets range from the traditional over the head style which has improvements in ear comfort, acoustic sealing and microphone performance to the new "behind head" style which allows coaches the ability to wear a variety of hats while using the headsets.

"The Motorola Coaches Headset is a critical piece of equipment for me as I communicate with my quarterback and other coaches," said Eric Mangini, Head
Coach of the New York Jets. "The new design helps reduce exterior noise, so
it is going to be easier to hear and communicate."

Motorola's Design Team worked closely with NFL coaches like Mangini to incorporate the most common requests from coaches into headsets that took design cues from popular Motorola products such as the recently announced RAZR2. The prototypes were then tested with the company's 'Human Factors Group,' which analyzed the performance and feel, before being tested in competition during NFL Europe games.

"The Motorola Headsets have become a signature in-game tool of NFL coaches,
so we had to create a design that communicated power, confidence and high performance." said Jim Wicks, corporate vice president, Consumer Xperience Design, Motorola. "This headset, which the fans will see each game day, is a
result of a year and a half of tight collaboration between our design team,
coaches and NFL officials."

Another innovation coming to NFL sidelines this season is the new Motorola Sideline Communication Center to replace the old "Phone Tables" that have

been used for several decades. The new Centers will standardize the sideline
communication throughout the League.

In the past, teams have placed between 7 and 15 traditional phones on a table for players, coaches and field personnel to use when communicating with coaches up in the press box. The new Sideline Communication Centers feature 16 phones in a durable mobile case complete with golf cart wheels, disc brakes and rack-and-pinion steering for easy transportation on and off
the field.

Phoenix PD had this channel in their UHF radios right next to their
Detectives channel.
No alpha tags, just numbers on the radio channels.
They would just move up one channel in the list to run their surveillances.
Then it would be cross banded into the VHF and be heard over VERY large
areas<vbg>!

Hopefully, this channel is NEVER used for anything more than testing, as
it's an interoperability/mutual aid channel.

Hi, Mike and Fellow Scanners:

Sometimes the scanner isn't on; AzCentral.com (The Arizona Republic's webpage) used to have a 24-7 live streaming feed of Phoenix and East Valley PDs. They've removed it for some reason--perhaps we as a whole group should request that they put that scanner back online. Tucson, for instance, has a live PD and Fire feed on the Arizona Daily Star newspaper's web site. Which, of course is great if you're in Tucson, but not as exciting for the rest of us Valley Phoenicians...

Let's rally the AzCentral website--it'll mean more listeners for them too.

Patrick if you want to listen to those areas on your pc let me know because
I stream live on the internet of the following :Mesa fire and police,Phoenix
Police and fire, FBI,DEA,MCSO,State Police, Tonto NF, Skywarn radio and some

other goodies. Let me know if you would like the link to be able to listen to my scanner.

Mark West <kd7lqw@yahoo. <mailto:kd7lqw%40yahoo.com> com> wrote: Patrick,

You are going to need a Digital capable trunk tracker for Mesa-Mesa is using a P25 standard-if you buy an old scanner, chances are it won't cover this. You need one of the following; 296, 796, pro96, pro2096 or one of the newer offerings like the 396 or 996-Radio Shack is also comming out with a new one this fall. If you get a scanner that can copy Mesa, then Chandler and Tempe can also be monitored. The county of Maricopa uses a mix mode digital and analog system-any of the above mentioned will cover this also with no problem.

I'm sure you'll receive a wealth of opinions here about what to buy and what not to.

My best advice to you is to watch Ebay. One can get some really good deals there on good current equipment.

Hey Matthew!

Actually all of the Phoenix Approach/Departure frequencies are transmitted from the TRACON building at the base of the tower. The antenna farm, however, may be on top of the tower. Here is a list of the current VHF frequencies and their sector names:

128.650 - North Arrivals - "Apache"
124.100 - South Arrivals - "Quartz"
126.600 - North Finals - "Freeway"
120.400 - South Finals - "Verde"
119.200 - North Departures - "Navajo"
126.800 - South Departures - "Santan"
120.700 - North Satellite - "Biltmore"
123.700 - South Satellite - "Pima"
124.900 - East Satellite - "Willy"

Best regards,

Todd,

Since I have an analog scanner (PRO-97), the only channel I'm currently monitoring is 169.450 (NET2/TAC2). There are periods of unincrypted analog operations -- it appears that the frequency is being used for some air operations. I haven't figured out what areas are being covered.

13954. Phoenix/Scottsdale/et al GMRS repeaters

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-08-20 10:29:10 UTC
From: John H. Guetherman
Topic: 13954 Message: 13954

I recieved an email from Chris Ebert (WPUC675/K9EKG) who is the founder/coordinator of the Lakes Area GMRS Repeater Group (www.laggroup.com) in the Mid-West.

He and his wife are moving to Scottsdale a couple of days after Labor Day, and he was curious as to whether or not there were any active GMRS repeaters in the Valley. They are very active there, and would like to be able to get on-the-air ASAP here on a current repeater untill he has the time to get his own up and running.

I haven't even monitored the GMRS in a couple of years, so I don't know what repeaters may be available. I gave him what info I had, which is 4 and a half years old.

Can anyone here shed some light on active GMRS repeaters in the Valley? You can contact Chris directly at laggroup @ yahoo dot com

Thanks.

ICP Monthly Scanner Get Together
Saturday August 25, 2007
6:00 pm - 9:00 pm
(This event repeats every month on the last Saturday.)
Location: Fuddruckers - The Worlds Greatest Hamburger
Street: 1928 E Highland Ave
City State Zip: Phoenix, AZ 85016

Notes:
Join Phoenix & sourrounding area scanner enthusiests for dinner. There are people with the latest & greatest scanners who will offer programming help & ideas.

Fuddruckers is located in the Camelback Colonnade on Highland just north east of the 51 Freeway.

From: helen_melon2001
Topic: 13957 Message: 13957

with a digital scanner, if you hear a garbley metallic sound, does that mean its encrypted or do i have my unit set wrong? Should i have it set on the Motorola setting? On FM Digital setting? i'm new at this. thanks.

Depending on the model of your digital scanner the sound you heard could
be encryption. The Uniden scanners won't even stop on an encrypted
transmission. I think the Radio Shack ones will but you will hear a
garbled transmission.

It could also be that the signal was too weak for it to be decoded properly.

Which channel/talkgroup are you hearing this on? We can help you make
sure that the scanner is at least programmed right.

That's odd? My Uniden's stop on encrypted transmissions. They
also show ENC on the display when doing so.

I know my 996 won't stop on them. There was an incident at a school near me last week where Gilbert's SWAT team was activated. After a while the SWAT team was told to go to their own channel (referred to as "Channel 8"). I quickly made sure I had that talkgroup programmed and held on it. The Southwest Frequency Directory shows that talkgroup as encrypted. Sure enough I would occasionally hear a small scrambled piece of voice but not for long. The 996 never showed ENC on the display. I didn't try my 396.

I shouldn't have assumed both of my Uniden models
were capable. I can only attest to my 396 stopping
and displaying on ENC transmissions. A great feature.
You'd think Uniden would have continued this on the 996.

Maybe it's a setting in the configuration of the scanner to display
ENC and stop or just skip the talkgroup if the encrypted bit is set.
I'll have to look in to it more.

For what it's worth, I have 2 Unidens. The BC796D stops on encrypted transmissions, the BCD996T skips them. I'm glad that they changed the design with the 996. I found it to be a pain in the neck to have the 796 constantly stopping on encrypted transmissions and needing to stop whatever else I was doing to push RSM to get it to move along.

An easy way to avoid having to push resume would be to lockout the offensive encrypted talkgroup. I'd rather have the choice, due to the fact that some talkgroups are not exclusively encrypted.

This was a "feature" that we (the beta testers) asked for during beta test of the 996. The consensus was:

a) You want to know that there is something going on

b) It doesn't do you a darn bit of good to sit on the channel because you can't decode it. (Kinda like the old adage: don't try to make a pig sing. You can't do it, and it only annoys the pig. Or something like that.)

So, the blip and then resume is what we got.

There was a small contingent who said they want to stay on the TG because sometimes the usage is mixed, and when the unencrypted user responds, they might be able to figure out what's going on. Of course, if there's not much else going on, the scanner will return to the TG when the unencrypted user is on it - but that might take a bit of time.

To me, the answer is to make the "skip ENC data" be triggered by the Skip Data switch ... but so far, Uniden has not bought off on that idea.

From: Danz, Dan
Topic: 13957 Message: 13972

[Further] One anomaly I observed with the 996 yesterday, and haven't had time to research or report:

Maricopa County (P16 with mixed digital/analog TG's) has some talkgroups designated as TalkAround, and I have them programmed in my scanner - I've never heard much on them, but yesterday - for the second time in as many months - I got encrypted P25 on the one called TalkGroup-Digital (the others are analog). And, instead of skipping, the 996 stayed on the TG until the transmission was over. Repeated when the TG again became active.

I know the skipping was working because at about the same time, and without any changes by me, the scanner was skipping on ENC transmissions from the Narcs on a different TG and holding on unencrypted transmissions in the same TG.

There must be something different in the control words for the talkaround talkgroups.

Sounds like typical Luke AFB F-16 training. You can hear this activity
most every day Monday-Friday.

371.4 BARRY M GOLDWATER RANGE NORTH TAC
302.3 BARRY M GOLDWATER RANGE EAST TAC

VIPER 1/2 are F-16 call signs.
BLACKJACK is probably an F-16 from the 21st Fighter Squadron "Gamblers".

For more information check out the Luke AFB page at Freq Of Nature...
http://www.freqofnature.com/index.php?m=Maricopa%20County&p=Luke%20AFB

13980. RE: [ArizonaScanner.com] War Games/Arizona

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-09-01 05:56:13 UTC
From: Mike
Topic: 13975 Message: 13980

This is not everyday training, I listen to them everyday and I get traffic
like this once in a while.

Subject: Re: [ArizonaScanner.com] War Games/Arizona

Sounds like typical Luke AFB F-16 training. You can hear this activity
most every day Monday-Friday.

371.4 BARRY M GOLDWATER RANGE NORTH TAC
302.3 BARRY M GOLDWATER RANGE EAST TAC

VIPER 1/2 are F-16 call signs.
BLACKJACK is probably an F-16 from the 21st Fighter Squadron "Gamblers".

For more information check out the Luke AFB page at Freq Of Nature...

They have places on the road to Ajo where you can watch some of that bombing. A friend and I happend to catch three A-10s making strafing runs and bombing targets. We didnt even plan on it, but heard a signal so loud and clear we pulled over.

It appeared they landed at the Gila Bend Auxilary Airfield when they were done.

Curious if they do training for "calling" CAS, or TAC in general,
down there. (Close Air Support/Tactical Air Control)

Has anyone monitored USAF Combat Control Teams, or Enlisted Terminal
Attack Controllers/Tactical Air Control Parties? Or the Army or
Marine equivalent? That'd be interesting to listen to. One of the
main schools for ETAC/TACP, the Joint Firepower Course, is at Nellis,
but I wonder if they ever use the Goldwater range, just because it is
fairly close in proximity?

http://www.afa.org/magazine/Sept2003/0903controller.html

I've got 11 more links regarding the two specialties if anyone wants
them. Email off-list.

John

From: phoenixscanner1
Topic: 2773 Message: 13990

Is anyone now monitoring Buckeye PD and if so on what frequencies / talkgroups. I saw that they were moving to the Mesa trunked system which is really part of the PRWN, but can't find any talkgroup information. If they are using the old frequencies I may just be out of range where I am now.

Funny that they would choose PRWN instead of maricopa county's system since they are surrounded by county juristiction, and since nearby agencies will be using the county system.

I guess the Chief of Police there really hates the sheriff so maybe that has something to do with it.

AZ central probably took it down because listening to the new trunked system is awful most of the time, with constant cutting in and out. The average person wouldn't want to hear it. It takes some getting used to.

As of yesterday Buckeye PD was using a trunked radio system that is referenced in the Southwest Frequency Directory. I monitored them most of the day yesterday.

It is a Motorola Type II system.

I have the following control channels. They change once a day

936.6625

939.6625

936.4750

938.2375

Channel 1 TG: 1952

Channel 2 TG: 1968

Although the officers constantly complain that they have poor radio coverage, I have been able to monitor them from as far away as Florence with a 396 and its factory installed antenna.

They have one repeater on the White Tanks.

Don,
The Maricopa Police Department currently operates on 154.740 Mhz. The Fire Department is now dispatched by the Phoenix Fire Department Regional Dispatch system. It seems that most of the time it is assigned to CH 8 (153.770) for calls, however, may occassionally be assigned to another channel for which I am seeking further clarification. If anyone knows the answer to this, please let us know. Thank you!

14004. International Space Station School Contact - Tucson - Friday 9/21

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-09-19 18:42:04 UTC
From: ka1jfy
Topic: 14004 Message: 14004

This will occur just after 8 AM Arizona time.
Listen on 145.800.

I've been able to listen to several of these events using my handheld amateur radio and even a handheld scanner.

You'll only be able to hear the Space Station side of the conversation [NA1SS], but it's still pretty neat.

Most ISS passes are about 10 minutes in length.

Walter
****
An International Space Station Expedition 15 ARISS school contact has been planned with participants at Pueblo Magnet High School, Tucson, Arizona USA on 21 Sep. The event is scheduled to begin at approximately
15:04 UTC.

The contact will be a direct between stations NA1SS and KD7RPP. The contact should be audible in most of western North America. Interested parties are invited to listen in on the 145.80 MHz downlink. In addition, the audio should be available via IRLP and EchoLink. The participants are expected to conduct the conversation in English.

The school's name, Pueblo Magnet High School, might connote a "highly developed and worldly" school. Pueblo is anything but "complicated or finely experienced and aware". Pueblo High School may be more accurately described as a pueblo: an intimate village whose inhabitants
most often learn about the larger world only as it comes to them."

The bias of being a "south side school" has a negative effect on teen's
self-esteem, teachers' morale and the potential for our program. A large percentage of the students are basically poor, coming from undereducated environments. Administration, teachers and staff at Pueblo Magnet High School work very hard to build a positive reputation
that is challenged daily by the reality of neighborhood violence, dropout statistics, low socioeconomic status and low achievement.

Touch the Sky is a project that has been underway for almost two years and that has as a primary objective, Pueblo Magnet High School students
communicating, via amateur radio technologies, with astronauts aboard the International Space Station.

Pueblo students are already learning to apply their daily curriculum lessons by applying them to their study of electronics, Federal Communication Rules and Regulations and amateur radio operating procedures in preparation for their amateur radio license exams. Presently there are five student licensed amateur radio operators, one at the General Class level. There are 27 other members in the Pueblo High School Amateur Radio Club who will become licensed radio operators
by April 2008. Pueblo High School is a registered school with the American Radio Relay League as one of only 200 schools nationwide in their "Big Project" Program.

Participants will ask as many of the following questions as time allows:

1. How many times have you orbited earth since you boarded the ISS?
2. Based on your present space experiences, do you believe there is human life on another planet?
3. What is there to do in the ISS?
4. Why did you want to be an astronaut?
5. How does it feel to be in a place where there is no gravity?
6. Were you scared when you went into space?
7. What advice can you give us teens who want to start a career in space?
8. How does loss of gravity affect your digestive system and how do you
eliminate bodily wastes?
9. What do you eat in space?
10. What was your state of mind as you left earth?
11. What is your sense of awe and wonderment of nature in outer space?
12. What is something you took for granted on earth that you now miss?
13. Is it difficult to sleep in space?
14. How do you use your hands to touch things when you are in your space
suit?
15. Are your sleep patterns different in outer space?
16. How much psychological pressure do you experience when you are taking a space walk?
17. What do you do in case of a power failure?
18. Is it possible for people to build a station on the moon for people
to live in?
19. How do you communicate with your family?
20. Do you have the internet in space?
21. How has space travel changed you and how will you live your life when you return to earth?
22. How do you know when it's time to sleep or rise if there is no day or night aboard the ISS?
23. If the ISS is rotating, how are your antennas directed or polarized?
24. Who or what inspired you to become an astronaut?
25. How is your sense of taste different in space?

26. Do cell phones work in outer space?
27. Have you discovered any other planets or moons?
28. Is it true that by reaching a very high speed in an extremely short
amount of time we can create a rip in the space-time continuum and go back in time?
29. How does it feel to be floating in space?

Information about the next scheduled ARISS contact can be found at http://www.rac.ca/ariss/upcoming.htm#NextContact .

Next planned event(s):
1. Heidelberg University for Applied Sciences, Heidelberg, D-69123, Germany, telebridge via WH6PN Mon 2007-09-24 08:00 UTC

2. Goforth Elementary School, Clear Creek, Texas, telebridge via WH6PN
Wed 2007-09-26 16:52 UTC

3. Smithsonian Air and Space Museum, Washington, DC., telebridge via WH6PN Sat 2007-09-29 16:28 UTC

ARISS is an international educational outreach program partnering the participating space agencies, NASA, Russian Space Agency, ESA, CNES, JAXA, and CSA, with the AMSAT and IARU organizations from participating
countries.

ARISS offers an opportunity for students to experience the excitement of
Amateur Radio by talking directly with crewmembers on-board the International Space Station. Teachers, parents and communities see, first hand, how Amateur Radio and crewmembers on ISS can energize youngsters' interest in science, technology, and learning. Further information on the ARISS program is available on the website http://www.rac.ca/ariss (graciously hosted by the Radio Amateurs of Canada).

Thank you & 73,
Kenneth - N5VHO

14005. PSR Series radio's.....

For those of us that are tracking, anticipating, waiting,
drooling for the new GRE radio's, I just got this message this
morning....

****
Dear Don Armstrong,

Thank you for visiting our website.

PSR-600 will be available in December at the price range of $500 to $550.
We will be soon updating our website for more information.

Nori Taniguchi, GRE Inc.

It could very well be the 20th now? I was originally quoted by
one of the distributors that it would be the 10th. Of course,
until it actually ships I wouldn't bet the farm on either date?
I can say with complete certainty that we WILL see the 500
before December.

Date: 2007-09-20 23:38:46 UTC
From: thekiltedgnome
Topic: 14010 Message: 14010

I have looked on this site for help, but haven't found what I am looking for yet. My scanner was preprogrammed with local frequencies, but I need help setting up what I want to hear in a way that makes sense (currently, multiple cities are spread among multiple "banks"). Any ideas? I live in Gilbert and work in Phoenix. I would like to set it up so when I am home, I can listen to "bank 1" for Gilbert PD, Gilbert Fire, etc. When I am at work, I want "bank 2" for Phoenix PD, Phoenix Fire, etc. When I am on the road, I would like "bank 3" for DPS, MCSO, News Choppers, etc. I appreciate any help on configuring soemthing like this. Thank you.

You'll have to tell us which scanner.

If it came "pre-programmed" I doubt it's right. Be sure to compare what it's programmed with either the Southwest Frequency Directory or radioreference.com.

Uniden has a free program that you can download from their website to program your scanner the way that make most sense to you. Simply visit the BC396 page on Uniden's website and click on the download link. It will require you to register before downloading the software.

Personally I recommend purchasing the ARC396-PRO software from BuTel http://www.butel.nl because it has a feature that allows you to download pre-programmed systems from the radioreference.com website.

How you decide to set up your quick links (The BC396 doesn't use old fashioned banks) is up to you, but from experience I can offer a few tips.

1. Assign trunked systems their own quick link button (i.e. Phoenix PD). Don't assign conventional systems with trunked systems with the same quick link button.

2. Assign quick links to systems logically. For your example:

1 DPS
2 MCSO
3 Aviation
11 Gilbert Police
12 Gilbert Fire
21 Phoenix Police (Trunked)
22 Phoenix Fire

3. If you are passivly monitoring the radio I find that it is best to monitor as few channels as possible. For example I will only monitor the local police channel and maybe the response channel for fire. If something of interest happens it will be dispatched by police, so no need to listen to all the mundane medical calls on the fire dispatch channel.

What is the advantages of that over the BCD396T or 996T? I know the GRE brands scan a little faster than Unidens on trunk systems but other than that I don't really notice anything better. Doesn't look like it has close call & repeater find or for GRE's version "Signal Stalker".

To name a few:
A user upgradable CPU and DSP (You can't
do both on the 396) A LOT more memory
capability. No need to MANUALLY tweak a digital
systems decode level. GRE's 'Spectrum Sweeper'
works the same as the 'Signal Stalker' I believe?

You can also pick up the East Valley with tags at mms://streamwebtown.com/mesafire This will have mesa police,AJ, Chandler police,Mesa fire,Chandler fire,Tempe fire,Rural metro , AJ fire and the med channels along with MCSO . Copy and past the link into your address bar not the Search engine bar such as Google,Yahoo.or MSN. Mat not work with fire fox. I made my stream theough www.streamwebtown.com .

Ok I lowered volume abite if some one had info one better p96 file
form my 2096 (with loutouts)? I can re-program scanner.

I was down today to clean up and back up server computer. Back up now

From: Kevin Cuene
Topic: 14026 Message: 14026

Does anyone know what frequency Tempe Marketplace is using. Their grand opening is this weekend and it should be busy.

AFAIK, the grand opening special activity is only tonight from 1900-2200. I'm planning to be there, so maybe I'll take my 396 and see what I catch.

Date: 2007-09-30 09:47:33 UTC
From: Chris F.
Topic: 6774 Message: 14032

And a reminder - they are APCO 25.

You need a digital scanner to listen (BC 796D, 896 or 396 or Radioshack Pro-96 or newer)

TGID 301 is main dispatch/central & south, 307 is North Patrol (both patched together on weekdays, separated on weekend nights)

I believe you meant the BCD996T. The BC296 will also decode APCO 25.
The 2 GRE models being released before the end of the year (PSR 500 & 600)
will also be APCO 25 capable.

14038. RE: [ArizonaScanner.com] live feeds

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-09-27 15:39:40 UTC
From: thomas billman
Topic: 14021 Message: 14038

I have phoenix fire on the 800 also on my scanner feed. mms://streamwebtown.com/mesafire I also have text tags with it so you know what your listening to. copy and paste the link into your address bar not in a search engine such as yahoo,msn,google .it works very well. if you can not open it with mms try http.

To: ArizonaScanner@yahoogroups.comFrom: fire4hyer@...: Wed, 26 Sep 2007 05:46:47 +0000Subject: [ArizonaScanner.com] live feeds

good evening,does anyone know of live audio feeds fr fire in phoenix area.thank you.

155.730 is a secondary frequency 154.055 is the
dispatch channel it used to just be fm and now its not
in the scanner books its shows it as being ems and it
is not I have lived here for a year now it is not apco
25 so I have no idea what system they are using.

14050. PVCC on 155.550?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-10-04 18:41:48 UTC
From: Robert Homuth
Topic: 14050 Message: 14050

I'm at 19th Avenue and Bethany Road, and can hear security guards making the rounds of a campus on 155.550 MHz. Paradise Valley Community College resides at 32nd Street and Union Hills, so wonder if this is it? I recently waited at the bus stop for the Union Hills 186 Route, but heard nothing on 155.550 MHz during the 40 minutes at the stop, or the bus ride to Desert Ridge Mall.

Anyone else hearing activity on 155.550? I can't detect a CTCSS tone to narrow it down.

From: hitman20us
Topic: 14051 Message: 14051

I'm just curious about this, but according to the 8th edition of the Scanner Frequency Directory, It's showing that the tribal reservation is currently operating on a 460 Megahertz Radio System, but I've overheard just recently they just switched to a new 800 Megahertz Radio System, I am curious but is Salt River still using the old 450-470 MhZ Radio System or did they switch to another radio system and if so, is the radio traffic on those channels are encrypted or not?

Wouldn't it make more sense that you're hearing either Grand Canyon (33rd Ave and Camelback) or Phoenix College (15th Ave and Thomas)? Last time I looked I think there are some mountains between 19th Ave & Bethany and 32nd St and Union Hills. Don't think there's a path between mountains although if someone knows better guess it's possible.

Thats horribly non-specific.

Does it sound like voice-inversion?

Or digital noise?
Or??????????

If it's voice inversion, then you're probably out of luck, unless
they're using the simplest of systems.

If it's digital noise, and your APCO25 scanner can't decode it, it
may be M/A-Com's AEGIS digitized voice, which you most certainly
won't listen to, as it's proprietary. Or it may be /\/\ DVP [mulitple
flavors].

From: Mike L
Topic: 14059 Message: 14062

For Sedona area here is what I listen to, and they are all good active freqs I listen to them everyday from the Prescott area.

Sedona FD (Call sign 500's)
154.400 PL 136.5

Verde Valey FD(300's),Cottonwood FD(400's),Clarkdale FD (200's),Jerome FD(100's)Verde Valley Ambulance (900's)

Disp 154.130 PL 136.5
Tac 154.400 PL 136.5

Forest Service (Prescott & Coconino Forest boundries run through Sedona area, and the Red Rock Ranger Dist is joint Coconino & Prescott NF)

Prescott NF Primary 168.175 PL varies 6 repeaters
Prescott NF Fire 172.225 PL Varies
Coconino Forest South Ops 171.550
Coconino NF North Ops 172.300
Highway Patrol Dist 12 460.425 PL 100.0
Highway Patrol Dist 2 460.025 PL 100.0

Sheriff (Same as Forest Service line runs through Sedona)
Yavapai County 154.740 136.5 & 154.725 PL 136.5
Coconino County 155.490

Sedona PD 154.760 PL 136.5
Camp Verde Marshall 158.790 PL 136.5
Cottonwood & Jerome PDs 154.875 PL 136.5
Camp Verde FD(800's)/Montezuma Rimrock FD(700's) 154.415 PL 136.5

If you need more email me off group, I live in the Prescott area, and monitor the Sedona area everyday.

But this is pretty much the most active you'll hear in that area

14063. NWS Transmitter Links

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-10-12 15:52:09 UTC
From: Doug
Topic: 14063 Message: 14063

Not sure if anyone really cares, but I thought I'd post these frequencies anyway. They are tough to pull in. So far, the only place I've recieved them are in Tempe.

Obviously, the signal is on a tight beam, so reception will be limited.

These are the Studio to Transmitter Links from the Weather Service Office.

415.900 KEC-94 Phoenix 162.550 South Mountain
413.900 WWG-42 Globe 162.500 Signal Peak
410.575 WXL-87 Yuma 162.550 Black Mountain

The audio quality seems to be a bit better than what you hear in the 162Mhz band since it's direct from the studio.

Anyone else care to comment or have any luck getting these signals from elsewhere besides Tempe?

14064. Re: [ArizonaScanner.com] NWS Transmitter Links

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-10-12 17:26:59 UTC
From: Walter Howard
Topic: 14063 Message: 14064

These really are point-to-point links.

The one from Yuma [Telegraph Pass] to Black Mountain has a 6 element yagi antenna [9dB gain].
And a transmitter power of about 30 watts.
These antennas have a 1/2 power beamwidth of about 60 degrees.

So, unless you are underneath the path, you will have an extremely hard time receiving them.

Walter

According to the radio stations, it's a table-top exercise at the EOC.
There's not supposed to be any activity in the field for it.

From: thomas
Topic: 14071 Message: 14071

Hello everyone !!,
I have a friend who has a scanner,outdoor antenna,and LMR400 coax cable for sale. The scanner is a PRO-2096 1 of the top of the line scanners for digital .The antenna is a dis cone antenna, 1 of the radios broke off when he went to move it. the coax is low loss coax just about the best you can buy and very expensive, He is asking for $600.00 which will include shipping . email me at t_billman@hotmail for further info in you are interested. The scanner is not a yr old yet in mint condition no scratches just missing the antenna it came with because it was never used so not sure where it went. It does have the ac and adapter for car and still has the box for it .
Any questions email me !! Tom (group owner)

Hi All,

It was a great Hamfest in Tucson on October 20th. Weather was perfect. There was a great turnout and great items for sell. Photos of some of the Hams and the Hamfest itself are now available for your viewing pleasure at www.n7jnd.com . Click on the red N7JND button and scroll down to the Photo Gallery and select the white line that reads *** Tucson Hamfest October 20th, 2007 ***

Hope to see you all at the Ham Radio Picnic in Reid Park tomorrow. Information on the picnic is also available at www.n7jnd.com .

Photos of the Picnic will be posted after the picnic.

From: Robert Homuth
Topic: 14074 Message: 14074

Super Target

Channel One: 467.750 no PL
Channel Three: 467.875 no PL

Channel One is for daily operations, while Three seems to be reserved
for security comms. I haven't heard anyone switch to a Channel Two, yet.

Construction crews:

451.800 Simplex

Carl's Jr:

469.0125 PL 94.8

Drive thru window radio has really bad audio, and splattery RF.

Taco Bell:

154.540 no PL

Very low powered, can barely be heard a few hundred feet distant.

WalMart:
151.955

COSTCO:
154.570

I haven't found the frequencies yet for the Big 5, J C Penny, nor the
newHarkins theater. The Harkins used to use 154.490 MHz, but it looks
like they have UHF radios, now.

14076. New to Radio Scanning

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-10-17 22:55:33 UTC
From: bwaichu
Topic: 14076 Message: 14076

What scanner do you recommend I purchase for listening to Phoenix PD, Phoenix FD, miscellaneous airshows, and communications at Firebird Raceway?

I have read that I need to go digital, and the only scanner I have heard any recommendations for is:

* Uniden BCD396T

Regarding Phoenix PD, have they gone encrypted?

So far, I am just listening to this feed (which is pretty much Phoenix FD):

http://www.members.cox.net/n7qyk/

Any Phoenix PD feeds available? All the links I find to the azcentral one just get redirected to their crime page.

Thanks,

Brian

The 'federales' are on a Tetra radio system that occupies 380-420 MHz.

I'll bet it's a couple of simplex freq's for cross border co-ordination.

From: n7qyk@cox.net
Topic: 14076 Message: 14080

To receive Phoenix PD you will need one of the newer APCO 25 compliant scanners:

Uniden BCD396 Handheld
BDC996 Mobile
BC296 Handheld
BC796 Mobile

Radio Shack Pro-96 Handheld
Pro-2096 Mobile

Or the just released GRE PSR-500 Handheld

You will find many opinions out there as to which is best, I have the 296, 396, 996 and a Pro-2096, and they are all in daily use here.

You might consider attending the ICP Get Together this weekend, that would likely give you a chance to see several of the scanners on the market being used. Check out www.icp-az.org for the location and time.

I am glad to hear that someone else is listening to my fire feed online. It was put up so I could listen at work and mainly for just fire and DPS to keep it easier to follow. I may add a second feed eventualy with possibly a digital system or two.

As far as encrypted channels, Phoenix PD does have several, but they are mainly investigations and detectives and such. Patrol and Hot Traffic is usually in the clear.

14086. Nontrunked 800MHz Activity?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-10-25 22:59:59 UTC
From: Robert Homuth
Topic: 14086 Message: 14086

I logged Glendale and Phoenix PD using USA-1 (866.0125) since the dispatcher could not crosspatch them otherwise. They were responding to a carjacking around 7:30AM a few days ago.

Goodyear PD, Tolleson PD, Paradise Valley PD, and the Sun City Posse use conventional repeaters in the 800MHz band.

Since I monitor with a Yaesu VX6 with 800 MHz monitoring, but not trunking, what other interesting public safety agencies use non-trunked 800 MHz comms?

Thank you,
Robert

14091. Queen Creek Fire Dept.

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-10-27 21:29:55 UTC
From: Jenny
Topic: 14091 Message: 14091

Anyone know what number prefixs will be assigned
to Queen Creek's new Fire Dept?
Also Gilbert is providing 2 engines to staff 2 stations
with Gilbert Firefighter's for 1 year starting 1/1/08 to 1/1/09
untill QC go's operational 1/1/09
I was thinking maybe 651 652 or something else in 400's or 600's

Eventually QC will have 6 stations with atleast 1 Ladder company

14092. Re: Queen Creek Fire Dept.

From: Jason McDowell
Topic: 14091 Message: 14092

The numbers could be a wild guess as Mesa is in the low 200's,
Gilbert/AJ is the mid 200's, it would probably make sense to have QC
as the high 200's. I doubt Gilbert will grow enough to add another 15
stations or so. Also, is Rural/Metro disbanding or something?
Scottsdale, Paradise Valley and now QC? They are shrinking by the year.

Rural swears they're not leaving the Valley, but I'm also beginning to wonder.

All the number series in the 200 range are taken. I'm not sure where they might go. Maricopa picked up the 570's and Ak Chin the 560's. I think we're running out of numbers.

200-229 - Mesa
230-239 - Sun Lakes
240-249 - Guadalupe
250-259 - Gilbert
260-269 - Apache Junction
270-279 - Tempe
280-289 - Chandler
290-299 - Salt River Indian Community

Hear what? That Gilbert will cover Queen Creek for a year until QCFD is formed and ready for service in 2009? See the QC website at http://www.queencreek.org/Living/NewResidentInfo/Fire.shtml for more info. It's not quite a final deal, but on Tuesday the QC town council voted to pursue an IGA with Gilbert to that end.

14097. Banner Health Systems (Banner Estrella Hospital Channels)

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-10-30 22:12:51 UTC
From: hitman20us
Topic: 14097 Message: 14097

I am looking for frequencies for Banner Health Systems (Banner Estrella Hospital) and can not find them anywhere. I was wondering and hoping that if anyone knows what these channels and frequencies are if they could pass it along. I would like to be able to hear the traffic from there.

Thanks

Topic: 14104 Message: 14104

Anyone have a good list handy for freqs up here on the hill? I've got one for local fire depts, and I think one for the local PD, but otherwise my scanner is pretty quiet. It's an old Uniden Bearcat 20 channel model BC 148XLT. Definitely not new, but works good for me.

PIR Post Race Weekend Freq Report

Since these guys come back here 2x per year and they will be back in the spring these freqs may be active again during that visit, they seemed to be almost the same from when they raced here earlier this year.

All Media Freqs Captured (RPU, IFB and Wireless PL)

450.2625
450.3000
450.3375
450.3625
450.4250
450.5250
450.5625
450.6625

454.5000 MRN Radio Network
454.7000 MRN Radio Network

455.1625
455.2625
455.3875
455.5625
455.6625

Drivers frequencies were standard for 2007 season as posted on any racing site.

Hello,
You might Join PrescottScanner here on Yahoo Groups.
It is for Prescott area, they do have a list(files area) that covers
most of Flagstaff.
Good luck,
Morgan

14109. Wittmann Fire

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-11-14 15:44:43 UTC
From: Alan E. Nielsen Sr
Topic: 5314 Message: 14109

Heard Last Night on Wittmann Fire Channel:

151.295 FB2 162.2 White Tank Mountain

E762, E765, R765, Brush 761, Brush 762, WT761, WT762, WT765, ??764

Unit 4, Unit 6, Unit 15

762 Units are from the Wittmann Station on Patton Rd & 203rd.
763 & 761 Units are from either the S Center Street station or the Old HW 40 Station
764 & 765 Units left the scene and went back to Morristown.

It appears that Wittmann & Circle City-Morristown are using the 761-765 Numbering series.

Surprise sent E304 & E306 on mutual aid, Phoenix Dispatch had them switch to Channel 4, the mutual aid frequency.

Wittmann made reference to contacting Surprise units on there Channel 3.

I also heard and E98 dispatched on a Phoenix Call. Where is this E from or could it be a reserve unit.

Alan

14110. BEWARE OF SCAMMERS

A lesson well learned. I was selling my scanner to get money to help pay for my sons karate equipment.Well I found a buyer and this was what
was suppose to happen this is the email given me directions on what to do ******Thomas,
Here is the tracking number for your payment. 8827926590 you can track it with DHL.
You will cash the money orders and send the excess money to Mr Peter Gudmunson, City, St Paul, state Minnesota, Zip code 55106. He will arrange how the printer will be picked up from you. Its good you have it packed and ready to go. All you will need to do is just send him the
money via western union and send me the MTCN control number i will need
to give him to get it. Please notify me as soon as you get the payment.
Austin Davies ******* Well I did just that . I put the money orders in the band and sent the difference to this peter guy whis was over $1000.00 .Western Union said this Peter guy picked the money up within hours of sending the money. Well gess what ... the money orders were a fake .. yes a fake . I found this out a week later. So I am now out over $1000.00 in the whole on my check account. here is the real name of this Austin Davies. Sean Youel of Des Plain IL. The dummy had DHL come to his house to pick up the money orders.Not very smart. Anyway you should never have to give anymoney that is given to you for someone
to pick up the item that you are selling.The buyer should give you the amount of the sale along with shipping charges and you send the package
out. A well learned lesson. Please pass this on to all your friends. I can't pay bills,gas for my car,food on the table for my kids for the next 3 weeks because I am in the minus range on my account. Hopefully I
am able to borrow money from family. So BEWARE OF THE SCAMMERS.

That scam has been going on a while now. Never accept a cashier's check or money order from someone you don't know especially if they offer you more than you're selling the item for and want the difference sent back to them. If you must accept cashier's checks and money orders from people you don't know, deposit them and wait 4 to 6 weeks for it to clear before shipping anything. I sell a lot of my unused equipment on eBay and I would get offers like this quite frequently.

If the name you figured out is really his real name I guess you could file a complaint with his local police department but I doubt you'll ever see your money again.

Topic: 5314 Message: 14115

This fire was directly behind my house at 240th Ave & Patton. Was a manufactured home with other structures close by. Had some livestock in the corrals but not endangered. Saw 3 ambulances on scene & believe they transported one, 2 tankers, 2 Surprise units, 1 Morristown/Circle City unit among the Wittman units mentioned.

Wittman Fire has been "760" series units for approx a year now,

Circle City /Morristown is not a 700 number they are as follows:

CCM-BR3 ENGINE TYPE 6 Available Circle City/Morristown V.F.D.
CCM-BR30 ENGINE TYPE 6 Available Circle City/Morristown V.F.D.
CCM-BR32 ENGINE TYPE 6 Available Circle City/Morristown V.F.D.
CCM-E2 ENGINE TYPE 1 Available Circle City/Morristown V.F.D.
CCM-E3 ENGINE TYPE 2 Available Circle City/Morristown V.F.D.
CCM-ER30 ENGINE TYPE 7 Available Circle City/Morristown V.F.D.
CCM-ER32 ENGINE TYPE 6 Available Circle City/Morristown V.F.D.

This is directly from the Arizona Interagency Dispatch CAD
(BLM/State Land)

http://63.196.254.151/WildWeb/WCAZ-AIDC.htm

Click on resource status

Also Lifeline Ambulance is the ambulance for this area running 3 out
of Wickenburg (Squads 4101, 4102, 4103 & S40 EMS Supv)

and 1 out of Circle City/Morristown FD Station 1 (Squad 4201)

E96 E97 E98 and E99 are units staffed by recruits from the Phoenix Fire Academy. They have a captain, an engineer, and then usually 3 recruits. The roam the town during the evening hours jumping calls to get the recruits some real life experience.

Alan,

Do you have intersections for the other 2 Wittmann stations? And what might "Old Hwy 40" be? Before freeways, Grand Av was US 60/70/89. Thanks.

Ed Ryan

14120. RE: [ArizonaScanner.com] Wittmann Fire

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-11-18 02:03:09 UTC
From: Alan E. Nielsen Sr
Topic: 5314 Message: 14120

I have located all of the Wittmann & Circle City-Morristown Fire Stations

Wittmann Fire

21201 NW Grand Ave on the frontage Rd at 211th Ave. 3 bay Butler type building with apparatus also parked alongside
30343 Patton, just before 203rd Ave. 2 bay Butler type building Station 762 Confirmed
32430 S. Center just off 60 on the right. a double door cement block building with meeting room in the back

Circle City-Morristown
41026 N Castle, Morristown, just off HW60 on the left, also houses Lifeline Ambulance with ID on building Station 42
380 Debs Dr, Circle City 2 bay fire station

I have seen the following units with appropriate ID
Brush 761 - Red Flatbed Brush Unit
Brush 762 - Red Flatbed Brush Unit
Brush 764 - White Flatbed Brush Unit
Tender 763 - White Water Tender

I have heard the following on the radio
Tender 761, Tender 762

Two units that left the fire and went to Morristown the other night were Engine 765 and a second unit I thought was R765

It could be that Circle City-Morristown is using Station 765 now, I will keep listening. I found in the FCC listings that they have a FB2 radio system located in the Morristown area
operating on 158.7525 FB2 & 153.8675 FX1 with Control Point at the Wickenburg PD station. I live in Sun City and I do not think I can hear that system.

The Circle City-Morristown units or at least the chief has radio contact with Wittmann Alarm Center.

I will keep listening.

Thanks for the information on the Phoenix Recruit units, they seem to be out this week responding. I have thus far heard E98 and E99 dispatched to calls in the evening.

Alan

I just got off the phone with my friend who works for Lifeline Ambulance in Morristown on Squad 4201 (Ambulance 1 out of station 42) and he confirmed that Circle City Morristown DO NOT run 700 series units, that is Wittman units, Circle City runs 1,2,3, and 30's units as I posted earlier off the CAD

He also sent me some pics of their rigs with signle digit numbers on them as well. I will post some to the group

Topic: 5314 Message: 14122

I posted pics of E1 & WT1 from Wittman and I will post it again here
is the wildcad listing from AZ interagency dispatch center that
shows CIrcle City/Morristown unit numbering

Here is cut and paste from the CAD

CCM-BR3 ENGINE TYPE 6 Available Circle City/Morristown V.F.D.
CCM-BR30 ENGINE TYPE 6 Available Circle City/Morristown V.F.D.
CCM-BR32 ENGINE TYPE 6 Available Circle City/Morristown V.F.D.
CCM-E2 ENGINE TYPE 1 Available Circle City/Morristown V.F.D.
CCM-E3 ENGINE TYPE 2 Available Circle City/Morristown V.F.D.
CCM-ER30 ENGINE TYPE 7 Available Circle City/Morristown V.F.D.
CCM-ER32 ENGINE TYPE 6 Available Circle City/Morristown V.F.D.
CCM-WT1 WATER TENDER TYPE 2 Available Circle City/Morristown

http://63.196.254.151/WildWeb/WCAZ-AIDC.htm

Also per Wittman Fire Dept they have 3 stations:

Station 1: 32430 S. Center

Station 2: 20343 Patton Rd

Station 3: Dispatch Center /Fire Base 21201 NW Grand Ave

email :

wvfd_1999@...

Call signs:

Medic 1: Capt/Paramedic
Medic 2: FF/EMT
Medic 3: FF/EMT
Medic 4: FF/Paramedic/EMS Coordinator
Medic 5: FF/EMT
Medic 6: FF/EMT
Medic 7: FF/EMT
Medic 8: FF/EMT/Training Coordinator
(Medics are 1-14)

Mobile 1: Chief
Mobile 2: Capt/Training Officer
Mobile 3: Asst Chief
Mobile 4: Asst. Chief
(Mobiles are 1-17)

From: Ed Ryan
Topic: 5314 Message: 14123

Mike,

Then on whose system is "Station 42"? Wickenburg? RMFD? LifeLine Ambulance?
Thanks.

Ed in Peoria

Subject: Re: [ArizonaScanner.com] Wittmann Fire

I just got off the phone with my friend who works for Lifeline
Ambulance in Morristown on Squad 4201 (Ambulance 1 out of station
42) and he confirmed that Circle City Morristown DO NOT run 700
series units, that is Wittman units, Circle City runs 1,2,3, and
30's units as I posted earlier off the CAD

He also sent me some pics of their rigs with signle digit numbers on
them as well. I will post some to the group

Mike

Theres actually 2 Lifeline Stations down there,

Station 41 is in Wickenburg
Station 42 is in Morristown

THey are on Lifeline Ambulance Freq , I pick them up here in
Prescott, where they are dispatched from on 152.345 Mt Francis or
160.170 Mingus Mtn

but they have a repeater on Yarnell Hill as well 159.555 or maybe
159.550 I think and PL is 146.2 (this is the one youll most likely
hear down your way)

the units go by their Station number then their rig number, example
Station 42 is 4201 (Ambu 1 out of Stat 42)
Station 41 in Wickenburg runs 4101,4102,4103,4104 and S40

you will also hear their northern AZ units as well,

11 = Prescott
12 = Prescott
21 =Prescott Valley
22 = Prescott Valley
31 = Chino Valley
41 = Wickenburg
42 = Morristown
51 = Williams
61 = Dewey
71 = Mayer area

Mike

Group,

Well after careful planning and getting ready to go to Sedona AZ, my plans have changed, now I will be in Scottsdale.

Does anyone have a P96 file that they can e-mail me?

I bought the SWF book, but I keyed all items back in March for a Sedona trip.

Help!

And Thanks!

14128. fig out a dps freq

how does a freq works like dps for area 3 is 460.300 and
also on 465.300 is used but when car to car and sometimes dispatch
uses 465.300 is used but it is silent on 460.300 how does that work
any info thx

14130. Re: [ArizonaScanner.com] fig out a dps freq

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-11-22 15:20:41 UTC
From: Jon M. Hanson
Topic: 14128 Message: 14130

That's a repeater. The output frequency of the repeater is 460.3000 MHz and the input is 465.3000 MHz. Everyone transmits of 465.3000 MHz, the repeater receives this frequency and rebroadcasts it at a higher power on 460.3000 MHz. If they are close enough to you, you will hear them transmit on 465.3000 MHz but you may not hear the other parties if they are too far away from you. You should always listen to the output frequency of the repeater if you want to hear everything and not the input frequency.

14131. Do news helicopters have receivers that can decode encrypted PD transmissions?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-11-22 15:46:23 UTC
From: tljb7
Topic: 14131 Message: 14131

I've been wondering about this lately. We watch Channel 3 news here in Phoenix in the evening. Several times lately they have switched over to the helicopter for "breaking news" and the pilot has said something along the lines of "All I have so far is what I've got off the scanner, so I'm hesitant to give many details, but Phoenix police responded to a 911 call for .... at this location and found ..." I've got a BCD996T and I just don't hear that much of the Phoenix PD since they went to digital and seem to encrypt a lot of stuff. Prior to the switch to digital I could hear a lot but now there just isn't much to hear. In fact, I upgraded from my 796 mostly becuase it wouldn't bypass the encrypted stuff and I was forever having to hit the scan button to get it off the encrypted transmission it was stuck on. About all I hear from the Phoenix PD on the 996 are some of the dispatch calls, not nearly the detail that the helicopter guys seem to get. I'm wondering if they can receive the encrypted transmissions, or if I just don't have my 996 set up right. Thanks in advance for any information you can provide.
Lee

No one has a scanner that can decode the encrypted transmissions. I
thought Phoenix's chase channels were not encrypted. It may be those
that the Channel 3 helicopter is listening to. Maybe you don't have
those talkgroups programmed.

Most of the news scanners for the 'good stuff' on PhxPD is the "B-deck and C-Deck" patrol precinct channels, no news chopper in the valley has the ability or likely will get the ability to listen to the encrypted goods. Another good listening tip is the helicopter air to air, the Police pilots will sometimes talk with the news guys when they are all over a scene with info.

465.300 is probably the input frequency and you can only hear them If you are close to the SPs unit.

14137. Southwest Frequency Directory 10th edition ?

Yahoo group: ArizonaScanner (2007 — 2012)

From: Jenny
Topic: 14137 Message: 14137

Anyone know when the 10th of edition of the
Southwest frequency directory is coming out ?
the 9th edtion is way outdated ?

Another thing to keep in mind is Phoenix PD's irratating habit of patching numerous channels together. Often times you may hear dispatch advise units to go to C-Deck9, so you go there and hear nothing. Why is this you ask? Well, MANY MANY times they will patch 2 or more talkgroups together making it simpler for dispatchers to handle the traffic and you end up actually hearing the traffic on another talkgroup. Oten you will hear C-Deck9 on C-Deck7 and it is being called 9 because that is what the actual radios think it is even though the numerical talkgroup is not.

On the PRO-96 & PRO-2096 ther is a very interesting program called PRO96COMM that can monitor the control channel and show what is going where. I find it facinating to wach and a much better use of my 2096 than trying to use it as a receiver comparet to the ease of use of the Bearcat 396 & 996.

Just remember in hunting for the HOT traffic they may not be where you think they are. :)

Another plug for Pro96Com is the most recent release has an option you
can turn on that lets you see the patched group list below the
```

activity screen.

14140. RE: [ArizonaScanner.com] Do news helicopters have receivers that can decode encrypted PD transmissions?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-11-25 19:24:55 UTC
From: Danz, Dan
Topic: 14131 Message: 14140

Right on, Roy ...

I'm sure you know this, but let me 'splain again for the group: There's another reason they do it that way ... to make it easier on the officers in the field.

Their portables have a three-way switch on the top that's easy to get to without looking at the radio. A, B, C ...

So, if the officer is, say, assigned to the Desert Horizon precinct (600), he sets his mode switch to 6 and the toggle to A, and his normal channel is 6A - however, with one flick (and two clicks) of the switch he can get to his hot channel, 6C. It can be done entirely by feel, without having to look at the radio. But they might not have enough dispatchers for 12 channels (4A thru 9A AND 4C thru 9C) ... so they have one apiece for the precinct channels (4A thru 9A) but double up on the hot channels. North side hot channels 6C and 9C might be worked by the same dispatcher, who patches the talkgroups together. The radio system picks one of them to put the traffic on, tells the radios involved to go to whatever voice frequency is assigned the combined talkgoup, and your scanner latches on to that one if it's programmed to do so. That very same dispatcher, working precinct 9 traffic, might tell those officers to switch to Charlie-deck 9 (9C) and in the next breath tell the officers on another hot call in the 600 area to switch from 6A to 6C. And everybody, 6C and 9C, will be worked by the same hot call dispatcher. If you don't have 6C and 9C both turned on, you might miss some of the traffic because - as far as I know - which of the two talkgroups the traffic will appear on is purely arbitrary. Maybe somebody who knows the Motorola controller software better can tell us that it's deterministic - perhaps it always uses the first talkgroup that the dispatcher adds to the patched group - but it doesn't appear to be deterministic for us scanner users. And the real users of the system don't care. It just works for them. The radio system controller knows what logical talkgroup each radio has affiliated with at any instant in time, and so it can direct the radio to really tune to the voice frequency assigned to that content.

Similarly, there's a protocol that comes when an officer suddenly gets into trouble on a precinct channel. Say for example, a downtown unit on 5A gets into a shootout. Dispatchers will NOT move that traffic to a hot channel. The officer has enough to do without switching his radio. It might get announced on other channels, with a hot tone to get help - but the 998 traffic will stay on 5A .. even after things settle down. Then a substitute/relief dispatcher on another console will pick up the routine traffic for downtown and move it and the

downtown officers in other areas to 5B. Again - it's just a flick of the switch for the officers and the dispatchers. But it means on your scanner you'd better be 1) ready to monitor the 5A channel when you hear the hot tone, and 2) if you were interested in downtown traffic and had been monitoring 5A, you'd better be prepared to add 5B to the monitoring mix. Of course, you'd have to have 5C turned on to get downtown hot calls too - and now you know that, since 5C and 7C get patched together frequently, you'd better monitor 7C too in case the system picks 7C for the combined traffic.

4C and 8C frequently are patched together and handled by a south side hot call operator (the old VHF channel 3)

5C and 7C frequently are handled by a central city hot call operator (not very prevalent in the old days of VHF, but I think there was a UHF 2)

6C and 9C frequently are handled by a north side hot call operator (the old VHF channel 1)

What do I do? I have my group quick keys set up like this.

GQK 1 == 6C 9C (North hot)

GQK 2 == 5C 7C (Central hot)

GQK 3== 4C 8C (South hot)

GQK 4 == 4A 4B 4C (South Phoenix) - disptachers call this 400

GQK 5 == 5A 5B 5C (Downtown) - 500

GQK 6 == 6A 6B 6C (Northeast) - 600

GQK 7== 7A 7B 7C (East) - 700

GQK 8 == 8A 8B 8C (Maryvale) - 800

GQK 9 == 9A 9B 9C (Northwest) - 900

Since I don't spend a lot of time on the south side, I usually keep 3, 4, and 8 turned off. But if something goes down, and it's announced citywide, then it's a few clicks of GCKs for me to start monitoring the traffic.

All of these talkgroups are usually un-encrypted but all it takes is a simple flick of the switch to start encrypting and sometimes they do and we're just out of luck. There are plenty of other channels that we can't get: 2A downtown events, for example, is encrypted. As are the three info/misc channels 16A, 16B, and 16C ... But that's wrecker calls, wanted checks, etc. and the majority of the routine police traffic, including hot calls, barricades, shootings, cuttings, robberies, etc, will be on my groups 1-9. And because I numbered them the way Phoenix dispatchers refer to the channels, I can quickly add or

delete whole areas that interest or don't interest me.

It also helps a lot if you add the numeric designation to the Group name - and also to the talkgroup names.

So, for example

My Group 4 is "South Phoenix 4"

And it has talk groups

" 4A South"

"4B South Alt"

"4C South Hot"

Group 3 is "South Hot 3" with talk groups:

"4C South Hot"

"8C Southwest Hot"

Then when your radio is locked on some talkgroup like 8C Southwest Hot and you hear 414A (a precinct 4 unit) on what you think is an 800 hot channel , you'll also see that it's the combined South Hot 3, and understand what's going on.

Just to be complete, there is nothing to prevent them from splitting the town differently for hot calls. For example, they COULD group 6 (NE) and 7 (East) together for some traffic around Paradise Valley or 9C (NW) and 8C (SW) for westside traffic. ... but I have only ever heard that early on when they were just starting to use the trunking system. When a situation gets split across precincts now, what I hear the dispatchers doing is working it on the hot channel for the crime (e.g., 6C) and then "adding on" or "pcking up" units (for example, from 700) but telling those units to switch to Charley Deck 6. Note that this means working two switches on the radio for those officers who switch over.

Hope this helps you monitor Phoenix PD ...

I emailed the Chief and he sent me a list of their freqs as posted below:

Mike,

The entire Verde Valley Fire & EMS has changed. All agencies are dispatched on Channel 1 and then assigned a Tactical Channel base on location. North Area is Sedona & Pinewood Fire, West Area is Verde Valley, Cottonwood, Clarkdale, Jerome Fire and Verde Valley Ambulance, South Area is Camp Verde and Montezuma Rimrock Fire. The radio channels are the same for Channel 1 to Channel 11. Channel 11-16 is agency specific. The frequency list is attached and is the Sedona version.

It's in the files section of this yahoo group.

http://groups.yahoo.com/group/Pro96Com/

The group administrator/owner is the person who created the program.
It ONLY works with the radio shack Pro96 and the newly released P25
scanner by GRE. Does NOT work with any Uniden scanner but can be used
to remote control several of the Uniden scanners for listening.

14155. Users of 155.475?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-12-02 00:20:26 UTC
From: Robert Homuth
Topic: 14155 Message: 14155

Besides the Morse ID, "KOE909" for the Arizona DPS -- who else uses the intersystem 155.475 MHz frequency in Arizona?

Please let me know if you can log other Morse Code ID's from where you are at.

Thank you,
Robert KB7AQD

You did the correct thing by NOT engaging Robert. In the future,
try to record as much information as you can about the interference,
(date, time, freq, etc) and fill out an interference report. Try the
following website: http://www.w7ara.org/Web/
and scroll down to 'Interference Status Report.' Recordings are
also helpfull if possible.

Subject: [ArizonaScanner.com] Bootlegger on 146.640- autopatch...

Thursday, around 12:00N, I needed to use the 146.640 autopatch -- but a
male operator kept keying up the patch, and calling various parties in
both English and Spanish. He used no callsign, and had little idea on
how to access the patch properly.

Who do we report this to? I didn't want to argue with a pirate on the
air. Fortunately, he wasn't aware of the 147.240 Shaw Butte machine, so
I got through with my call.

Thank you,

KB7AQD
Robert in Phoenix, AZ

Phoenix Police are now on a Project 25 digital system so your scanner can't pick them up. You'll need to purchase one of the newer digital scanners to hear the Phoenix Police. Phoenix Fire still dispatches on 154.19 MHz but even they have eventual plans to switch to the digital system.

Perhaps it would be more accurate to say that they have eventual plans to someday think about possibly maybe switching to the digital system.

Useful info about this is located at:

155.475 is National Law Enforcement Mutual Aid Radio System
(NALEMARS), I'm sure any police department in Arizona operating on VHF
has this radio channel programmed in their radios.

This has been discussed many times on this list.

To pick up the Phoenix Police (and other agencies that are also on the Phoenix Regional Wireless Network) you'll need one of the following: Uniden BCD396T (handheld), Uniden BCD996T (base), Radio Shack/GRE Pro-96 (handheld), Radio Shack/GRE Pro-2096 (base), or the newer Radio Shack/GRE unit that came out whose model number I don't recall at the moment.

DPS is the licensee for the AIRS [Arizona Interoperable Radio System].
I doubt that there's anyone else with a base station that auto ID's.

My understanding is that it's heavily used in Yuma County and Coconino
County.

Everything you could possibly want to know about AIRS:
<http://www.azdps.gov/pscc/standards.asp>

Walter

BTW: KOE909 is the callsign for all DPS's law enforcement radios on South
Mountain.

AJPD can't afford to switch over to the 800 system . It'll cost 2
times as much to install a new radio system in at the PD and plus all
car's need new radio's and so on . Just my .02

Thanks, everybody so much for your replies.

My first gig as a callow youth in 1969 was as a newsman on the radio in Honolulu and then here in Phoenix at KTAR AM/FM...there was always a scanner barking out news stories in the background while we worked and I got to enjoy knowing exactly what's happening as it's happening.

I think I know what to tell my wife to tell Santa this year!

Again, thanks so much!

Cheers!

Jonathan

14179. ASU Police upgrades

From: roots_grow_ten
Topic: 14179 Message: 14179

Hi

I came across this story in the ASU paper, the State Press. It says that they're expanding and improving upon their communications system.

"The station will include an upgraded dispatch center and radio system, which will allow ASU police to communicate with the Tempe Police Department and all other agencies, Hardina said."
http://www.asuwebdevil.com/issues/2007/11/20/news/702825

Does anyone know what kind of changes might be in store?

Thanks

Sean

14180. Yellow battery tray for Pro-96 needed

From: roots_grow_ten
Topic: 14180 Message: 14180

Hi

It appears that the yellow battery tray for the Pro-96 is no longer in stock. Does anyone have an extra one that they'd be willing to part with? I've also posted to the Pro-96 group, but I thought I'd give it a shot on here, too.

Thanks

Sean

14181. Arizona 700 mhz Trunk Radio systems?????

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-12-05 01:52:51 UTC
From: daiche
Topic: 14181 Message: 14181

Anyone know if there are any of these new P25 systems proposed in Arizona. I have been considering replacing my Uniden 296D and 796D scanners with new Uniden/GRE scanners having 700 mhz coverage, close call, dynamic memory, etc. Having a hard time justifying an upgrade just yet. I am sure someone will think of a good reason for me to do so. Ha!

I noticed that Las Vegas has a 700 mhz system, but it is OpenSky and not scannable.

It seems to have reached a point where portables like the Uniden 396T and GRE 500 have pretty much the same features and performance as the base scanners and finally have gotten away from proprietary batteries. Anyone have an comments and insight on the new portables, especially as compared to my 296D and 796D?

The Public Safety Communications Advisory Council has announced a P25, trunked, 700 MHz, single site, demonstration system for installation in the DPS building on White Tanks, with connections to PRWN, and shortly thereafter, Yuma County.

Probably won't be in by Super Bowl.

Walter

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-12-09 01:17:04 UTC
From: Danz, Dan
Topic: 14165 Message: 14184

Welcome aboard, Jonathan; But I have to warn you: If my wife is helping Santa this year, you're in trouble.

I, too, was a radio and television newsman in my youth in the early 60's, in La Salle, IL and then San Antonio. I left the business after 12 years, ended up in computers, and many years later moved to Fountain Hills, AZ. One day, I too lamented missing the chatter from the scanners. That Christmas, my wife and Santa collaborated to get me a modern scanner. That was in 1995, I think. Wow! I could hear Phoenix PD, MCSO, both fire dispatch centers, Tempe, Scottsdale, Gilbert .... Many more than we monitored in San Antonio.

It wasn't long before I was totally amazed at how violent the radio traffic had become in the intervening 25 years - and I set off to see if I could do something to help.

Since the Sheriff's Office patrols Fountain Hills, I started looking there, first. Soon, fellow ham radio operator Gary Niki, a posse instructor at the time, convinced me I needed to join the Maricopa County Sheriff's Posse. I wasn't wild about wrestling drunks, etc., and happened to mention that I could probably help out more as a dispatcher. We arranged a ride along in Radio ... and I came away with my head spinning.

Amber W. was picked to put up with me - and after 4 hours, I came out of there with my head spinning. I already knew a lot of the radio codes and callsigns (thanks to the scanner) so that wasn't what got me ... It was Amber ... she was working one very active channel (East) and another semi-active channel (Lakes) using one foot pedal for each channel and with her hands manually selecting the best tower to use to talk to a particular unit. And, she also was monitoring Info/Chase and West channels, talking on the phone, recording it all in the CAD incident history, sending messages to call takers and other operators on the CAD system, while simultaneously reading the newspaper, chatting with other dispatchers, and buffing her nails ! Talk about multi-tasking !! I was hooked.

The normal 6 months of training required to be a 9-1-1 operator and a main channel radio operator at MCSO stretched to 18 months when done part time in the evenings.

Ten years later, I still put in about 20 hours a week as a part-time dispatcher besides my full time job which pays the bills. That's a lot of time gone from the house.

So, I think, if your wife asks my wife, the advice she will get would be something along the line of "Distract him. Act dumb - don't let him

know you know anything about buying a scanner. Get him some nice warm socks for Christmas, instead. "

But then again, maybe your wife will be as wonderful as mine. J

Dan Danz (WA5SKM)

I took my Uniden 396 to a WalMart at Arizona Avenue and the San Tan Freeway and found them to be using 154.57 MHz, which is a business interant. These a frequencies that just have a mail-in license requirement and no repeater. I'm sure other WalMarts are doing something similar. Whenever I discover the frequency of a retail store they have always been using hand-held radios not on any kind of a repeater. You're not likely to hear them from miles away because of the low power of the radios (and the buildings have a lot of metal in their structures).

I've logged the Superstition Springs Mall WalMart using 462.6750
PL123.0. I think they typicaly use VHF for store operations and UHF
for security.

I agree that most national retail stores use standard business iterant
frequencies, but most tend to program their radios with the same
frequency and PL/DPL tone which makes it easier to identify them.

If you want to check out my radio logs you can find them at
www.freqofnature.com .. click on the 'Databases' menu option and then
'RF Database'. Please feel free to contribute additions/comments to
the database :)

From: John Timmons
Topic: 14188 Message: 14188

Living in the City of Maricopa and adjacent to the Ak-Chin Indian Community, I would appreciate knowing what the correct/active operating frequency is for both the Ak-Chin Police and Fire Departments. I have not heard any communications on the odd 461 Mhz. frequency listed in the SWFD. Any information on Ak-Chin would be appreciated!

I can't believe the horrible reception on the PD side with the
majority of Phoenix being flat except for the surrounding mountains.
Reception shouldn't be an issue at all as that can be resolved.

154.570 is part of the Multi-Use Radio Service (MURS), and has been for years. It is a license-free VHF-CB radio service, and almost anybody can use any of the 5 channels available. Fairly low-cost 5-channel handheld radios are available, such as from Dakota Alert. (MURS ch. 4 154.570 and ch. 5 154.600 are commonly in use by Wal-Mart.)

See http://wireless.fcc.gov/services/index.htm?job=service_home&id=multi_use for more info.

462.675 is in the middle of the licensed General Mobile Radio Service (GMRS). If Wal-Mart or any other business is using it, then each and every employee needs to have their own personal license and they need to be using their personal callsigns. If not, they're operating illegally, and are subject to fines and confiscation of their radios by the FCC. Most likely, they're using those 22-channel FRS/GMRS "bubble packs" and didn't bother to read the part in the manual or on the packaging that states a license is required in order to use them on certain channels.

See http://wireless.fcc.gov/services/index.htm?job=service_home&id=general_mobile for more info.

If you must know, its not cheap to switch everything ovver. Dont forget Phx FD dispatches for 23 cities. Thats allot of apparatus to switch over. Not only that, some of there small cities dont have alot of funding to switch it over at this time!!

Phx FD dispatches 23 cities. If you think about it not all cities have the funding to switch the system over. the project is supposed to be up and running by 2011. I have heard them on on the P-25 system but not very often. Just be patient and give it time as Mesa FD has been using it since 2001 and still have problems with it!!

they are low power radios you would have to be ubder a 1/4 of a mile to pick them up.

I took my Uniden 396 to a WalMart at Arizona Avenue and the San Tan
Freeway and found them to be using 154.57 MHz, which is a business
interant. These a frequencies that just have a mail-in license
requirement and no repeater. I'm sure other WalMarts are doing something
similar. Whenever I discover the frequency of a retail store they have
always been using hand-held radios not on any kind of a repeater. You're
not likely to hear them from miles away because of the low power of the
radios (and the buildings have a lot of metal in their structures).

I work at Wal-mart as a manager in Flag, and we don't have repeaters.
The best you're going to get MIGHT be a half-block away on a good day.
My bigger question would be why would anyone care to hear Wal-mart
radio traffic? I've actually worked in some stores that use the
handheld Unidens that you get off the shelf in Sporting Goods
Department. But still you can't get much long distance reception;
once again the metal in the building really disrupts signals. Ever
try to get a cell phone signal in an old Wal-mart? Nearly impossible.

I honestly don't know why I have a fascination with business radio traffic. I guess it's not the traffic itself (sometimes it is) but I've always been curious when I saw someone using a radio what frequency they were using and what was going on. I keep track of what I've found, both business and non-business, here: http://the-hansons-az.net/mediawiki/index.php/Scanner_information.

I just started @ the store on southern ave and i've noticed there signal is bad at times . I don't use 1 myself since i'm in the maintance dept i just thought a 2 watt radio would do better than that . I never have a problem with my cell phone inside the store and i'm using a cheap cricket . I did notice only management uses those vhf job's and the rest are on those frs radio's . If there only 2 watt's why would the FCC even bother giving them a call sign ?

You don't need a license for the FRS frequencies (the first seven). You do need a license for the GMRS frequencies (channels 8 through 22). The FRS frequencies are limited to 0.5 watts I think. I don't know what the power limit is on the GMRS frequencies but it's higher than 0.5 watts.

You do not need a license for the FIRST 14 FRS Channels.
If a particular radio goes beyond 14 channels, those do need a license.
That was the worst thing the FCC ever let happen was those blister packed combo radios that have FRS bundled with GMRS.
Someone a while back (not in the group) started this thing about the last 7 channels needing a license. Yes they are in between GMRS freqs but are not GMRS freqs they are FRS.
If you want to go ahead and get a license to use 7 thru 14, hey! it's your money.

14215. Re: [ArizonaScanner.com] Re: Wal-Mart

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-12-13 21:49:27 UTC
From: Walter Howard
Topic: 14185 Message: 14215

Close, but no cigar.

There are ONLY 14 FRS channels. 95.627

None of THEM require an individual license [they are licensed by rule].
95.191 [FRS Rule #1]

7 of them are shared with GMRS. 95.29 para (f)

And then there are 8 GMRS [wideband] simplex channels. 95.29 para.(a)

14 channel radios are FRS only.[No license]

15 channel radios have the 7 shared and the 8 GMRS [wideband] simplex.
[Requires license on GMRS, usually ch 8-15, maybe on all if power above
500mW, or removable antenna]

22 channel radios have all 14 FRS plus the 8 GMRS simplex. [Requires license
on GMRS, usually ch 15-22, and maybe on shared if power above 500mW, or
removable antenna]

What a nightmare!!!

Part 95 rules are at
http://www.access.gpo.gov/nara/cfr/waisidx_06/47cfr95_06.html

Walter, WPXP269 GMRS

Topic: 14209 Message: 14216

Phx FD is still working on their Digital 800mhz system. Here is a list of freq and TG they can be heard on. its not all the time but they do test it a couple of times a day!!

Freq.
867.0875, 867.1125, 867.9375, 867.9875, 867.8375, 867.2375, 867.3125, 867.4375, 867.5875, 867.8125, 868.1125, 868.2625, 868.4375

TG:
1702 (Dispatch), 1703 (Dispatch), 1795 (Dispatch), 1794 (Dispatch), 1743 (Ch. 2), 1742 (Ch. 3), 1741 (Ch. 4), 1777 (Ch. 5), 1776 (Ch.6), 1775 (Ch. 7), 1774 (Ch. 8), 1773 (Ch. 9), 1771 Ch. 10)

I hope this helps out!!

Tom,
Go to www.radioreference.com Click on radioreference data base, and clivk on the state of Arizona. The TG for Phx Fire are in there. If you need help, let me know and I will help you.

Does anyone know the freq used by Retzenberger Taxi Co. used by the BNSF railroad for pickup/delivery of relief crews for the trains, saw one this afternoon here in Paulden at the BNSF tracks doing a crew switch with the train, and it was a mini van that said Retzenberger Cab company on it.

Thanks
Mike

Mike,

The UP talks to them on the road channel down here in Srn AZ when coordinating crew pickups. You might give the BNSF road freqs a listen.

Retzenberger uses the same freq as the RR does. You will hear them referred to many things such as the "relief crew" or "van #xx" it could be a variety of things. There is no real reason to listen to them just like Wal Mart, Arby's?etc etc etc. Besides they don't talk very much anyway. For us RR photographers they are meaning less & in many cases not nice.

Mike,

After thinking about it a little more, here is a little more explanation. You will most likely never really know when a crew van is called because they will use the telephone weather it be cell or land line. Now and then you will hear a RR dispatcher call the van asking for their location and again you will probably not hear them since the RR freq is simplex unless you are physically close when they talk.

Just because you live near the tracks doesn't mean you'll hear them. As far as the BNSF, those vans operate from Needles Yard office, Phoenix "Mobest" yard and Winslow. For Arizona, I think on the Union Pacific, they operate primarily out of the Tucson and Yuma yards, but the vans can be seen anywhere either picking up a crew in any location weather it be at the other end of the RR yard or in a remote location such as Drake, Az where the crew might have gone "dead on the law." I'll add that you probably won't hear them referred to as "Retzenberger van".

Adding my experience to this, I've heard in the Tucson area numerous times references to a call for Retzenberger on the radio. Granted, they do not carry on full blown conversations, and it usually restricted to "where are you and go pickup the crew at Mile Post such and such." That too can be useful, if you're wanting to catch a picture of a stopped train.

I don't recall what size antennas were on the vans, if any, so I'll have to pay closer attention to the ones down here and see if they've got something else too. It could be the other standby - cell phone :<

Just my two cents,

John

John,

Yea I agree. And it also depends on which RR you are next to or the part of the country. Not all big Class 1 railroads use Retzenberger and just like a current article in I think its Model Railroader magazine, some crews call them limo's.

Put PRO96COM or some other control channel software on site 302 and you'll see the 700 frequencies that are shown as being site 303. I sorta think that site 303 doesn't exist anymore, not just an incorrect list of frequencies. Sorry if I gave you that impression.

Of course someone may find site 303 with their scanners and prove me wrong - but so far I can't find it. Site 302 used to be only the 5 800 freqs that radio reference lists but now indicates the 700 freqs also.

Large whip antennae (48" - 60") are on the
Retzenberger vans that I've seen around Tucson.

There is no engine in Mobile. It's a brush truck (BR187). I don't think anyone's seen it, so maybe it doesn't really exist.... I'll look through my pix and see if I have 182 though.

Aha! Brush 187 does indeed exist. However, it only becomes visible when it crosses over into Pinal county. See the link below for a couple of late afternoon pictures of the phantom unit. It has also been spotted in the Basha's parking lot in Maricopa. There was also a BC unit in town the other day from Goodyear. I'll take better care and get some more pictures when I see them next.

That's not surprising since they don't have a repeater. I'm sure the address is some administrative office for Wal Mart.

I found that the latitude and longitude for antenna sites in the FCC database to be really off. The country club where I live has a fixed antenna (with a repeater, I think) on one of their buildings. However the latitude/longitude for the country club's antenna was nowhere near where the country club is. I don't know what the requirment is for that or how stringent that requirement is.

When looking at locations, one thing to remember is there are 2 systems notations currently in use, NAD27 and NAD83. There are conversions between them, but you need to know which is being quoted, and which is the basis for the map you're looking at.

And don't forget to look at ALL the locatons listed on the license. A single callsign could conceivably cover EVERY Wally World in the country.

Walter

PS: Please trim your replies. The guys on digest get a lot of unnecessary clutter.

From: seventiesmp3
Topic: 14236 Message: 14236

Could we all please be on the same page as to what the FRS frequencies are... They consist of 14 frequencies and they DO NOT need a license. Power is limited to 0.5 watt (500 mW), and cannot use an antenna other than what the radio came with (sorry, no modifications). I'm talking of FRS not GMRS, lets keep it simple for some people. If a particular radio goes beyond channel 14, those channels require a license. But I doubt a lot of people actually apply for one. Go to the FCC web page and search for FRS. I don't have the link handy. There are some mixing of the two services on certain channels which create two sets of rules actually.

Actually Ed is partially correct and partially incorrect. And there are the photos to prove it. When you ask for photos of Engine 187 in Mobile, he is correct that there is NO engine in Mobile. But yes there is a Brush 187 which is a Pierce Wildland Contender unit.

I am guessing you must be asking for the photos for another person on the east coast that has already asked myself for the photos. Is this correct? And his name is Mike??

There is no engine in Mobile. It's a brush truck (BR187). I don't think
anyone's seen it, so maybe it doesn't really exist.... I'll look through my
pix and see if I have 182 though.

Ed

Aha! Brush 187 does indeed exist. However, it only becomes visible
when it crosses over into Pinal county. See the link below for a couple
of late afternoon pictures of the phantom unit. It has also been
spotted in the Basha's parking lot in Maricopa. There was also a BC
unit in town the other day from Goodyear. I'll take better care and get
some more pictures when I see them next.

We have the FCC database on the www.freqofnature.com website with a
radio site mapping feature. Go to the following URL then click on
'Search by Call Sign' and enter your FCC call sign of interest.

http://freqofnature.net:8080/fcc/fcc.php

To get to this from the main menu of the web site, click on
'Databases' and then 'FCC Mercator'.

In my findings, Site 302 Thompson Peak has several 700MHz Voice channels but no 700MHz Control Channels. There is 1 Control Channel and 3 Alternate CC's per site for the Phoenix/Mesa system(s).

Site 302
867.22500 Alt
867.37500 Alt
867.72500 Alt
868.36250 Control

Someone told me there was a 700MHz CC in the West valley but I have not been able to find it in my travels. I've been looking alot more with the PSR-500 and found alot more systems in the 900MHz band but nothing new for 700 or 800.

If you live in the Phoenix,East Valley, West Valley we are looking for members that can help with our DAT teams. This known as Disaster Action Teams. What we do is respond to local and national incidents such as house fires,wildland fires when requested ,floods,or any major evacuations that need to be done. Upon request from fire departments we will help those who have been displaced and help them with food,clothing,and a roof over their heads. We are in great need of members. If you are interested please email me off the list and I will point you to the right direction. For those who are ham radio operators the chapter has a vehicle that goes out to major incidents all over the USA to help with comms.I am posting this in this group because lots of us are scanner buffs and what a way to respond to an incident and get involve . Tom (east valley DAT member)

14243. New Glendale FD units.

Yahoo group: ArizonaScanner (2007 — 2012)

From: John H. Guetherman
Topic: 14243 Message: 14243

Saw on the news earlier, that Glendale FD has purchased a pair of ASAP units. Alternative Support APparatus.

Battery-powered, with a top-speed of 35mph, it looks like a golf cart with an ambulance/medic body on it. It can carry a stretcher patient and 2 medics in the back, with a driver and another person in front. They'll be used at University of Phoenix stadium during the Superbowl, to help transport a sick or injured patient to an staged ambulance, which will then transport to the hospital.

Much easier to get through a crowd than a full-size ambo/medic unit.

Similar units were used at last year's Superbowl, and GFD liked the idea, so they purchased two.

Oh, and although Goodyear's Brush 187 is designated a brush unit, wouldn't it officially be considered a Type 3 wildland engine?

I drove by Goodyear Station 187 today, located on the corner of Maricopa 238 and S99th Ave.

It is a portable building shared with the police who have an office there.

The unit, BR187 is parked outside in a carport with a canvas top over it.

John,

Depending on where you are (not necessarily in Arizona) many depts call these small vehicles like this something different. The more well known term to scanner listeners around here is Medic Cart. Of course I am not saying that was Glendale will actually call them Medic Carts and it appears they might be sticking with ASAP, but you know never know.

Just wait for the unveiling of the "Alpha Unit/s" by Phoenix FD soon.

As far as Brush 187, yes the rig is actually an NFPA Type 3 Wildland vehicle. In California these would be called Brush Engines, but here they are usually called Brush ###. Its a Pierce (builder) Wildland Contender (model) and again was built to CDF specs.

Just like most fire depts around here call anything with an aerial on top a ladder. Doesn't matter if its a rearmount tower/platform, aerialscope, Bronto Skylift, mid mount tower, teleboom, telesquirt?etc etc, they all call them ladder. To even make it more confusing, Diamond Star FD near Payson bought Surprise FD's rearmount ladder that was assigned to Ladder 302 and are calling it an engine. I think I have it figured out why, but I need to check with the chief there first to see if I am correct.

14247. Goodyear Public Safety in Mobile

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-12-22 12:19:24 UTC
From: John Timmons
Topic: 14247 Message: 14247

Living on the northwest side of Maricopa and only 13 miles from Mobile, it has been interesting reading all the recent posts concerning the Goodyear Fire and Police Departments actually operating there from a temporary facility. As in a previous post,I, too often see Brush 187 and a Goodyear engine company fueling just down the street from me which is the nearest gas station to the Mobile FD-PD station.
In regard to this I have two questions that perhaps someone might be able to answer:

1. What frequency(s) does the Goodyear Police Department operate? (I believe the Fire Department is on the Phoenix Fire Dispatch System)

2. Will Mobile remain Mobile or will this community simply be an area of Goodyear?

Thank you for your responses!

John,

My understanding and what some of the Goodyear FF's are telling me, Goodyear is expected to annex all the way to I-8. I would assume after they annex the land, it will be called Goodyear.

The annexation has been completed, which is why BR187 is already down there. There may be other annexations pending, but Goodyear does indeed to down to Interstate 8.

Goodyear FD does operate on the Phoenix system. I think calls down there are handled on Blue 12, and in Pinal County, as you get over towards Maricopa, are handled on Channel 8. As far as I know, there is no backup channel in Maricopa. I'll have to check on that. Channel 8 is the backup for the Goodyear area down there, but probably won't work well in many areas.

Does anyone have a FD for Yuma FD or any FD in Yuma County. It seems like the ones I have do not work anymore.

Thanks
Brandon

14253. US analog cell-phone service to end in February

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2007-12-24 07:28:18 UTC
From: Dave Bohmke
Topic: 14253 Message: 14253

In the UK Analog cell phones were phased out in the last century but it is only now that the USA is finally withdrawing the service.

The US regulator the FCC has issued this statement:

As of February 18, 2008, cellular telephone companies will not be required to provide analog service.

This could affect some customers of alarm monitoring systems. While the majority of alarm systems installed in homes and businesses do not use a wireless radio signal to connect to a central monitoring station, some alarm systems use analog radio equipment and send a wireless signal - provided by a wireless telephone company - using the 800 MHz spectrum.

These systems are affected by the transition. According to the alarm industry, out of a total 26 million installed alarm systems, there are approximately one million systems that use analog radio equipment. Wireless alarm systems installed before Spring 2006 generally used analog equipment.

There are several ways to tell if your alarm system will be affected by the analog-to-digital transition. Most alarm companies are contacting their affected customers by letter, bill insert, and/or telephone to arrange for replacement installation of a digital alarm radio.

In many cases, if you have an analog alarm radio that has not been replaced and the analog wireless network stops operating, the radio will emit a "beep" or warning tone.

If you believe your alarm system relies on an analog wireless radio and you haven't heard from your alarm company, or if you're unsure about what type of alarm system you have, contact the company to determine your options for maintaining service.

For more information, see the FCC's Consumer Advisory on this subject at: http://www.fcc.gov/cgb/consumerfacts/analogcellphone.html

All but 3 or 4 call signs remain active Nation Wide. Most Wal*Mart stores have a contract with a communications company like bearcomm or some other company. Store 2112 is an example of this using the CP-200 UHF radios they had the first 4 channels programmed in the 462.000 business band using DPL codes encode and decode 467.900 was the main store op's channel. Some stores depending on the Store Manager or Co will grab FRS radio's off the shelf in either Sporting goods or electronics dept and "Store Use" them to save on the big bonus they get each year. Most stores operate without any coordination or FCC license. Some use Icom some use Motorola and I have even seen Standard Vertex in stores. The only repeaters used are at the distribution centers one in Buckeye has 3 on UHF. The most you could expect to hear is day to day operations and maybe an occasional security call for back up as the under cover prepares to grab someone just outside the store. If you were to search the FCC data base you will notice a bunch of expired call signs so you will have to search from 151 to 154.600 and again from 461 to 470 to find them Use the link below and do a "Name Search" for (Wal Mart) and yopu will see what I am talking about

http://wireless2.fcc.gov/UlsApp/UlsSearch/searchLicense.jsp

From: ftlaud_dj
Topic: 14257 Message: 14257

Well if you've heard the rumors they are true, like many other cities around the country, Phoenix now has it's first P25 Ham Repeater on the air and hopefully it will be the first of many.

This is not a D* system, it's true Apco P25 on the air in UHF from the East Valley. If you're equipped (which we know many are), the freqs are as follows:

Input: 443.725 PL 110.9 Analog / NAC 293 Digital
Outpt: 448.725 PL 110.9 Analog / NAC 293 Digital

Yes it's mixed mode and has awesome coverage even in the west valley.

ENJOY and 73's

All the channels are linked from VHF to 800. The link was accidentally taken down for a short period. Keep in mind this is a SmartZone system, so even though they're linked, you may not always hear them

I've never seen them using conventional two-way radios of any kind. I've never gotten any hits with my Uniden in Close Call mode in a store. The only thing I've seen them using are these handheld devices that look like some kind of souped-up cordless phone.

Ok everyone I have almost the bus yest scanner around outside of LA,Philly, and NY . I have been asked from a few friends to stream my feed on a new team speak server which has a lot of friendly guest on the server . This is the server that you want to go to to hear my scanner www.incidentbroadcast.com:8768 . Anyone is allowed to come to the server to listen. All you need to do is down load the team speak server. Streamwetown keeps stopping ,I think the encoder won't hold as many guest that use it.here is the list of what you will hear:
Phoenix pd
phoenix fire
mesa pd
mesa fire
Tempe pd they will have a festival tonight with about 7000 ppl there!
Tempe fire
DEA
ATF
FBI
News choppers
I do have Mesa Fire as the priority !!!

Meant to add this in the last one... Let me know if that is it or not for sure. I cant seem to get it real clear from my house. I dont think that channel is on the repeater. I get 1 2 and channel 5 just fine from my house but the other one has some static on it.

Anyone listen to the APS Trunking System? I have been monitoring it for the last two days and have a TG that I cant seem to ID. The TG is 24112.
Thanks,

Bryan

I can't help with the specific talkgroup but I remember talk some time ago about law enforcement agencies using the APS trunking system. Is that the kind of traffic you're hearing?

I heard someone call for someone else and that was it. I am using UniTrunker to track my local system. Yesterday, I had two radios monitoring it. Just some guys talking to each others right before lunch. Then one hit today.
Trying to find where my local APS traffic went. I rarely here them on there VHF freqs. so I thought I would monitor there Trunking system to see if that is where they went.

I've heard a bunch on there, its especially busy during the summer
when bad weather hits. I've heard some surviellance activity on there
as well, (not sure of the talkgroups)

As with most activity like that, it may be hopping for a day or 2,
then off for a bit, and that stuff is 9-5 stuff mostly.

Hello Bryan,

I also use Unitrunker and have listened to this system at different locations throughout the state. I've put some of the major ID's on the RadioReference website. I don't have that specific TG in any of my logs however.

Have you noticed if the RID's are talking on other TG's? This may help you to ID who it is.

Some have mentioned that LE and other entities also use the APS system. If you haven't yet looked at the database that is notated on line, check out the following link
http://www.radioreference.com/apps/db/?sid=2350

Since you are using Unitrunker, perhaps we can work on an exchange of the files that Unitrunker is picking up on this system. This'll help us both with ID'ing the different activities that we hear on our ends or travels :)

If you mean a 17 inch whip, then, YES it makes a world of difference over the stubby that comes on most scanners.
Even better would be someting you can get up in the air. With radio, altitude is everything.
I have some antennas that were intended for use inside the windshield of a car.
They have a BNC connector, about 6 feet of skinny cable, then a 17 inch 'antenna' with 2 suction cups.
I use them as cheap external antennas on the scanners in my office, hanging down from the ceiling tiles.
I found them on eBay for less than $5.

14291. Update on Maricopa P.D.

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-01-04 22:19:04 UTC
From: John Timmons
Topic: 14278 Message: 14291

Thanks to Burns HMS and everyone elso who responded to my query on what frequency the Maricopa Police Department is now operating. You were right, the department is indeed using 154.220 Mhz. as their dispatch frequency. In briefly listening to this 'new' frequency, it certainly does sound like it is a repeater operation; in addition, I am receiving their broadcasts loud and clear at my home, however, I live only 1 mile from the department. I will let you know how reception is from my vehicle the next time I am out and about.

It is interesting to note that this frequency was originally used by the Maricopa Fire Department. This will now make the fourth different frequency the Police Department has used in the span of 6 months.

Thanks, again to everyone!

I picked up another one today. TG: 9776
I would be happy to send you a copy of my files.
I don't have much right now since I just started using Unitrunker a couple of days ago. But, it looks like I already picked up two new TG id's. the TG: 24112 sounded like APS. The TG 9776 sounded more official. I can't keep my laptop running 100% time I'm at work so my Affiliation screen gets cleared several times a day. Other wise, I could give you more info about them.
If you want, contact me off list and we can exchange more info about the Preston Mesa - APS Trunked Repeater.

Queen Creek FD officially started operations on January 1st, 2008 at 7am.

Station 411 although staffed by Queen Creek FD personnel now, are using reserve Gilbert FD apparatus until their 2 new pumpers arrive as well as some Gilbert personnel. I know this is not a fire apparatus group (forgive me Dan), but here is a little explanation on their equipment. They are dispatched by Mesa Fire Dept.

They have on order 2 Pierce Quantums tagged onto the 3 currently on order by Gilbert. I do not know the colors of their appartus at this time. Possibly towards the end of the year or in 2009 they are expected to purchase thier own ladder. Since Gilbert L255 is quite close, there is not an immediate need for it. They should be renovating station 411 (x-FS855) and then will start construction on their 2nd station. I forgot when that was. I believe at some point over the next few years they are expected to build a new main station.

Per the Town Of Queen Creek website, the intergovermental agreement between QC & Gilbert regarding the fire dept, is that it will be in place for 1 year. By Jan 2009 they will have to be 100% on their own.

The website also lists the following address for their 2nd station when it opens.

Station 412 24786 S Sossaman Road

14300. Problems receiving Gilbert transmissions on BCD396T

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-01-06 20:39:40 UTC
From: John
Topic: 14300 Message: 14300

Hi All. I have a new BCD396T that replaced my old scanner that didn't support digital trunking so I could monitor Gilbert, where I live. My problem is that the majority of received transmissions are often choppy, drop in and out, or just seem not to receive (decode?) at all, even though I observe full signal strength occurring (this is seen most frequently when the scanner stops, a control channel is displayed and DAT flashes). I only live about three miles from the PD and Dispatch gives me fits. Could I simply be having reception issues? I have no problem receiving trunked signals from the Phoenix, Chandler, Scottsdale, Tempe systems. I swapped out the stock ducky and am using the Diamond RH77CA antenna (I also tried the Radio Shack 800 MHz antenna). The system settings on the scanner are as follows: System Type - Motorola P25; Hold time - 0; Delay - 2; ID Scan; P25 threshold - Auto 8(I have even tried to optimize this threshold per the owners manual but level 8 seems the best fit at this point); I-Call - on; Modulation - auto. I have input all the primary and alternate control channels for the Phoenix Regional Wireless Network per RadioReference.com. Any help in solving this frustrating situation is greatly appreciated. Thanks in advance.

1) Lock out all but the Mesa D primary site. 867.8250 tonight). Make sure that is the CC you are on. Don't use any other frequencies, and disable all other sites for a while.

2) Note any voice frequency that is choppy....then direct tune (hold, enter freq, hold) and listen to just that voice channel for a while.
Do you hear anything that suggests adjacent channel interference? Tune above and below a bit and listen. I have trouble with strong
signals adjacent to some but not all of the Mesa-D voice channels.

3) if you have strong signal, turn on attenuation for the system and see if that helps.. It could attenuate the adjacent channels enough to
let the desired frequency get thru with less desenitizing of the receiver front end by a strong nearby signal.

4) CQPSK systems have multiple sites (Mesa-D has 9 I think) all with transmitters on the same freq(s). It doesn't matter where you are in relation to the PD is but where you are in relation to the towers. Check the drawing in SWFD for tower locations.

I too live about 2-3 miles (south) from Gilbert PD.
I have the same problem probalby about 30-40% of the
time. Im not sure though if they transmit from there,
or from Mesa, as I think they're part of the Mesa
System ???? someone told once told me it could be
interferance from a nearby cell site. Dont know if
thats accurate or not. Sorry.

14305. RF boxes on telephone poles?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-01-07 19:34:12 UTC
From: Robert Homuth
Topic: 14305 Message: 14305

I see data boxes on many Phoenix area telephone poles with short rubber duck antennas that look like they're tuned for around 150 MHz.

Are they receive or transmit?

And, around Metrocenter, I see other RF boxes with upside-down curled antennas dangling from light poles. One is near the Arizona Canal Diversion Channel at 29th Avenue, and another one is near the car wash on Metro Parkway east of Sears.

I am certainly a beginner with how to program these scanners. However, somewhere ?? I think I read that the Delay should be set to zero (ref 2 in the settings). That is what I have on my 2096.

Just an FYI, 154.220 that Maricopa PD is now using actually shows registered to Maricopa Fire in the FCC Database. They are using PL 88.5 and I can receive them on a discone in far north Phoenix. The channel used to be used as a backup for Black Canyon Fire but I haven't heard them using it in along time and then all of the sudden Maricopa PD started showing up. Pretty funny listening to all the call that include, 'Yeah, call CBP and let em know we got another dozen for em to pick up'. Definitely a hotspot for immigrant smuggling.

Thanks for the reply Dan. I followed your suggestions below. When listening to the voice channel I didn't notice much adjacent channel interference. However, I did put the attenuator on and that seemed to help a bit, although I'm still getting choppy signals (I also opened up the squelch a bit). It appears I'm about three to four miles from the closest tower (Greenfield and Germann). What's interesting is that I seem to get better reception when I'm upstairs in my home. As soon as I go downstairs or out in my yard, the signals degrade. Also, I get clear reception when I connect the scanner to my UHF/VHF Ham antenna that is mounted on the roof, but then I'm stuck in my shack! Any further suggestions would be appreciated. Thanks in advance.

I have experienced the same problems here in Mesa with the 396 and 996. I also have a Pro 96 and the 2096. I got frustrated because I could only receive half of the conversations on these radios. Reception was equally poor both at work and home. I put up a yagi antenna about 25 feet in the air and pointed it toward downtown Mesa. I now receive about 95% of the conversations. I have tried both portable radios in the vehicle with an 800 Mhz. antenna mounted outside, but the reception is still bad. Can't really justify putting a yagi on the roof of the car tho. I purchased a PSR 500 from GRE and that radio will pick up about 85% of the time without an outside antenna. I have tried everything to get the Uniden and the Shack radios to work better, but to no avail. Maybe someone here has a magical fix. If so, please share your knowledge. Thanks

I want to program maricopa SO and I don't have a clue. I have a basic understanding of how trucking systems work but nothing about talkgroups and other digital systems. And since police call is no longer available where does someone go to get fregs.

Also when did they not include the mili air freqs in my pro-96? I paid so much for it it should have everything

Thanks
Matthew

The Southwest Frequency Directory is much better than Police Call ever was. You can get it at http://www.scannerstuff.com.

It's pretty difficult to program the scanner from the keypad. Most people use a program like Win96 to program it. It makes it a little more intuitive. With Win96 you can also unlock the military air frequencies.

You probably don't have the system set up right. It should be configured as a Motorola Type 2 system and not a pure P25 system.

What side of the valley are you in?
Did you program the correct control channels and is CC on?
Do you have it set to scan or search?
If you have talk groups programmed set it to scan and you will hear those
but noting else.

If no talk groups are programmed in then set your scan to search and you
will hear analog and digital.

a friend that will remain unnamed sent me this:

154.220 is now known as "Maricopa PD 1" and 150.805 is now known as "Maricopa PD 2." They are still dispatched by Pinal County SO, a dedicated Dispatcher works those channels as often as possible now. When they are short, they move Maricopa PD back over to PCSO Channel 5 where they used to be. Channel 5 is the "west county" channel for PCSO.

PCSO still has their own frequency (the old "PCSO Metro" freq that their Maricopa contract units used) which is 154.740.

They are now up and running 24 hours day. Six officers during the dayshift, five on swings, four on Graves, 3 on all shifts during the weekend.

Verizon has an explicit prohibition [as I believe all the carriers do]
against using a wireless connection to run ANY server.

thanks... i was trying to program it as a P25 system instead of Motorola Type 2 system .. thanks for the help....

aar9sm <aar9sm@...> wrote: What side of the valley are you in?
Did you program the correct control channels and is CC on?
Do you have it set to scan or search?
If you have talk groups programmed set it to scan and you will hear those but noting else.

If no talk groups are programmed in then set your scan to search and you will hear analog and digital.

Mike

Just because they do it, doesn't mean they're legally allowed.
It's specifically prohibited in the contract, with possible loss of
use with no recourse.

I will take any other comments off-list.

Walter

BTW, what e-mail client runs the lines together like that?

14330. Cell Phone as Modem (was Good morning all !!)

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-01-12 12:36:03 UTC
From: Dennis Griffin
Topic: 14323 Message: 14330

I use a Palm Treo 700P, on Sprint service, as a modem with my MacBook Pro. Along with my voice plan, I have Sprint's Phone as Modem plan, which offers unlimited internet time, without airtime charges, whether browsing with the phone or tethering (or BT) to the MacBook, for $39.95 a month. I have been doing this for about a year and a half with no problems. Best deal out there that I know of. I may download as much as 1GB of data a month, and they have never balked or tried to charge more. Download speeds go from 50 - 125 KBps, or 400 + Kbps. I believe the monthly unlimited plan for a wireless card is $60 if one also has a cell phone & voice plan, or $80 if not. As far as using this setup for a continuous data stream, I can't say how that would work. I do stay tethered & connected to the internet for hours on end. I'm sure it would depend on the quality of the signal at one's nearest cell site and what data rate would be sustainable. I think one can try a device with Sprint for a month and return it if not satisfied, paying only for the service used.

Is "Mean Gene" still sitting Mt Ord tower?

14333. HF scanning

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-01-13 05:28:13 UTC
From: Jon M. Hanson
Topic: 14333 Message: 14333

The recent news item about Iranian boats charging the US Navy ships in the Persian Gulf while threating them on the radio made me wonder what frequency is used for international naval communications between navies. I know about the standard marine VHF channels but I did a Google search to satisfy my curiosity. I didn't really find a definitive answer but I did come across numerous sources of HF frequencies that would be interesting to listen to but I don't have the right equipment. Does anyone on the list monitor HF frequencies? If so, what do you like to listen to and what equipment do you use?

14334. Re: [ArizonaScanner.com] HF scanning

The freqs are too numerous to mention here. I subscribe to Monitoring Times and there is plenty of info there. Concerning the Iranian boat situation Ch. 16 was used in that operation.

Ed is correct. Ladder Tender 61 has been in service for many months now operating out of Station 30. Sation 61 is nearing completion, but I haven't heard of a opening date.

LT 61 is operating with Ladder Tender 4's rig this entire time and I haven't heard what they will actually use when the station opens.

From: mark@shander.com
Topic: 14323 Message: 14338

Hi - if anyone would like more information on Verizon Wireless BroadbandAccess, I'd be happy to answer any questions at mark.shander@... . There are some uses that are not within the terms of service agreement that relate to streaming, and above 5 gigs per month Verizon Wireless has the right to throttle speed down, but it may be an ideal solution for you.

If you're an ArizonaScanner member, for the remainder of the month I'll offer to send you one for a two-week demo at no cost. That will give you a chance to take it on-location, and see if it will provide the service you expect.

I have about 5 available I can provide as demos in January - please don't reply to me here - please reply to mark.shander@... . I'll have one of the reps on my team set this up for you - there's no obligation and it does not start an account for you. You do click a link to accept responsibility for the device and its prompt return after the trial period.

Hope that helps.

Regards,

Mark Shander

Has anyone heard yet what tactical channel will be utilized by QC on the
Mesa system and if it's patched to VHF?

West Deputy runs out of Glendale Station 157 this is there home
station but can also be found at stations 151, 155, 158, & 159.
Depending who is West Deputy that night

I believe the West Deputy runs out of 157's (51st Ave, South of Peoria).

However - I am curious if that's a Glendale unit or Phoenix?

John.

14353. New Helo in the area?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-01-15 15:30:31 UTC
From: jwimig
Topic: 14353 Message: 14353

Lately I have been hearing HALO 151 (or is it HELO 151?) on the air, such as this morning when they responded to the First Alarm Medical 962 at Greenway and Grand Ave.

At first I thought that might be Ranger 41's new home (I have heard that DPS isn't too happy with the arrangement with Phoenix (or vice-versa) and was looking for another location for a pad), but I heard Ranger 41 on the air the other day, so I guess it's another helo.

Can someone let me know if they know what it is?

Cheers!

Halo 151 is a joint venture with Air Evac and the Glendale Fire Dept. Air Evac provides the helicopter and Glendale provides the paramedics. They are based out of Glendale Airportand are dispatched on Air Evac's channel 1 of 155.325.

It is Halo151 and it flies out of Glendale Airport. It is a joint effort with AirEvac and west valley FD's. It has to Glendale firefighters on it. But Goodyear, Surprise, & Sun City has trained Firefighters that have been known to be on helo also. FYI Halo 151 used to be called AirEvac 3.
I hope this helps

Feel free to help them. I frequently do, but I don't always post my reply to the group. I know that sounds like contrary to the group's purpose, but I should point out that the information in SWFD is copyrighted material and publishing a large list of frequencies in a public forum not only violates the copyright but also my sense of fairness. So, I won't do it, because a lot of the data might have originated from my well-thumbed copies of SWFD.

Posting one or two frequencies (like the recent posts about Maricopa PD) is just fine -- especially when you know the data is not available yet in SWFD - but the guy who wanted to know all the frequencies for MCSO won't get a posting from me. He MIGHT get a direct e-mail from me pointing him to the upload of my Phoenix area (including MCSO) UASD file in another Yahoo group, if it will work for his radio, or I might send him the UASD file by direct mail. It really depends on whether I think my answer will benefit the whole group or just that person. So you won't always know if I or some other member has helped the newbie, will you?

What I *will* post is information about techniques, radio setup, etc. Do you ?

I also believe that if you teach the person how and where to search for the information they want, they'll learn a lot more and appreciate the help. Suggesting that the newbie look at a very valuable source of information is not turning down the request for information; it's telling them how to help themselves. If the person then says: "I can't afford it", then we should point them to free sources of information. There are plenty of free sources of information about frequencies, but caveat emptor - you get what you pay for. Some of it's good - but some of it is sadly out of date. I know that Dan R. and others spend money and time to collect and validate the information in SWFD and certainly there are publishing costs so I'm quite willing to pay for this convenience. In fact, many years ago, I started to collect a database of frequencies, callsigns, radio codes, and anything else I could collect from free sources on the net. Fortunately, for my sanity and recovered spare time, about the time my DB had 1500 entries, somebody told me about SWFD. It had ten times as much information as I had managed to gather, and it was more up to

date. I thank that person who told me about SWFD (you know who you are). And, further, it's not JUST a list of frequencies - there's lots of other good information in there, like maps, codes, callsigns, etc., that make it a lot easier to listen. And I guarantee, if a newbie is asking for frequencies, he probably needs help with radio setup, callsigns, codes, and all that other good stuff too. So don't put us down for suggesting that the person consider SWFD. We just might be doing them a big favor.

All of this is my not so humble opinion, to which I'm entitled. As are you entitled to yours.

Halo 151 is stationed at Glendale Airport and is not only a medical transport helicopter, but is used by several west valley communities for aerial recon and is automatically dispatched on all 1st alarm and greater fires and can be special-called to any other incidents in the participating communities. At first I was under the impression that it was dedicated to those communities, but it can fly on medical responses in any area of the state if needed.

You might try the common search & rescue channels 155.16 and 155.265.
These are most likely simplex so you will need to be fair close to
hear them.

it is joint AirEVac and Glendale FD, it is still painted in PHIs paint
scheme but however its stripe is blue on the yellow helo just like Glendale
FD's units This is a new project with AirEvac/PHI (Petroleum Helicopters)
AirEVac's parent company they have another program like it in Texas, its
still kinda a new project. Some of the opther West Valley FD's may help
staff it but officially the partnership is Glendale & AirEvac
http://www.azcentral.com/community/glendale/articles/0702gl-chopper0702-ON.html

http://www.glendaleaz.com/BoardsandCommissions/documents/080807AviationAdv-F.pdf

155.160 is a standard SAR freq, maybe they switched to MCSO SAR Freq 159.090??

14368. 2-meter P25 ham repeaters in the Phoenix and surrounding areas?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-01-18 18:58:57 UTC
From: pm1072
Topic: 14368 Message: 14368

Hi,

Was wondering if there are any P25 digital/IMBE 2-meter ham repeaters in the Phoenix or surrounding areas? I plan on visiting there later in the year and would like to have them programmed into my radio.

Please send information regarding Output/Input Freqs, and the NAC required.

Thanks in advance!!

14369. Re: 2-meter P25 ham repeaters in the Phoenix and surrounding areas?

Right now, only UHF has a P25 machine on the air, VHF should be up in the coming months, if you do have a UHF unit, do a google for P25 Ham Phoenix and their are a few refs with freqs, NAC and PL for analog.

At least three Civil Air Patrol (CAP Flight-225, CAP Flight-236, and CAP Flight-255) aircraft are active over Srn AZ involved in a search pattern, probably practice.

One is active over Grid 441. Another was curious about rocket launch ops.

At least 3 other aircraft, a helicopter, and another unid aircraft are in the area.

This is not a D* system, it's true Apco P25 on the air in UHF from the East Valley. If you're equipped (which we know many are), the freqs are as follows: Input: 443.725 PL 110.9 Analog / NAC 293 DigitalOutpt: 448.725 PL 110.9 Analog / NAC 293 Digital

Mike it's up, just coverage is really limited right now, we're making some changes soon which should improve the inbound, I know that with P25 we have about 10 guys that have radios on it and we radio check a lot during the day but honestly either analog or digital UHF or VHF, the ham bands here in the metro are really lackluster.

I'll keep my ears open for you if you come down this weekend.

I'll be down this upcoming weekend at Alltel Ice den for a Hockey tournament. I usually get down in the morning on sunday and leave late Sunday night so I have some breaks between games to try the repeater out.

I have been able to hit it from the Coyotes Ice arena during our games in both analog and P25 mode, this weekend I'll be a lot closer to usery so maybe someone will hear me, I'll try analog first and if I can raise someone then P25.

I do have my scanner live on teamspeak . I will be streaming for the game. If anyone has any frequencies that they think and talkgroups that i should add please send them to me. I can hear the west valley MCSO,Phx PD State PD no problem at all. I will ask to have the server beefed up to over 100 listeners for the game .It is set up for 100 listeners now. Please send me anything that you know of that will be used . thanks tom

14390. Digital P25 Frequencies On Mingus Mountain? 868.9750 & 867.5375

Possibly National Park Service, they are supposed to be switching to P25,
some of the parks already have.

Hi Tom,

Assume your talking "Super Bowl"? I have never been to an event there,
but the stadium and the surrounding area is in the "City of Glendale",
so they may have a heavy security presence there. You are probably
aware of this, but since you didn't include in the above.....

That's because it's not a Word document. You need Win96 to open and
program the file into your Radio Shack/GRE scanner.

The only change was that El Mirage is being "dispatched" by Surprise PD rather than MCSO.

At the top or the system page, it will show the latest News update. Here are the last two entries:

News Update Posted on 2008-01-12 10:18:53
As of October 2007, El Mirage PD is dispatched by Surprise PD.

News Update Posted on 2006-10-24 14:33:49
El Mirage and Youngtown both are now using the MCSO digtal side of this system using the Westside dispatch, talkgroups 43120, 43216, 43696.

Date: 2008-01-29 00:14:49 UTC
From: John LaBua
Topic: 14405 Message: 14405

Hi all,

I'm a little surprised that this wasn't already posted when I got home from work but for those in the Phoenix area that monitor military freqs, the U.S. Navy Blue Angels are in town.

I was driving in the area of Cave Creek Road and the 101 Loop and had one pass overhead at about 2000-3000', gear down, northbound. I wondered where he was headed and have since been told that they are out at Deer Valley Airport. I drove by the airport a little later and didn't see anything but driving a truck dodging cars doesn't make for a very easy situation to see much. I also heard one about an hour earlier but, again, driving and trying to see anything in the air isn't that easy so I never saw anything. Don't know if this is the same one or a different one as the one I actually saw later on.

They are apparently doing the fly-over for the Super Bowl on 2/3 so they may be out and about several times over the next few days.

Also, a little surprising that they would be out at DV rather than Luke AFB, but again, I don't know for sure that they are actually at DV.

Brandon.

Yes they did, But it is rare to hear Youngtown I still hear them everyday on 453.2750 using it as talk around.

The reason I asked is on RR someone recently stated that they are now on the Surprise system and around the same time someone posted that they have new TG 43208 and 43176 they were pretty heavy traffic on 43120, I have been hearing reference to El Mirage traffic on Surprise PD but not enough to tell for sure.

Angles are Navy, Luke is Air Force, if the Thunderbirds were doing the Fly Over, their equipment would be at Luke. When the Blues are in town they typically park at Goodyear but that's for their shows, DV makes sense.

Don't forget fire/EMS. Glendale FD (and most likely surrounding FD's
so that GFD isn't over-stretched); Southwest Ambo; and HALO 151, the
joint GFD/AirEvac helicopter.

Fox10 had a piece on the ATF presence at the stadium, with bomb
sniffing dogs. ATF probably won't tbe the only federal presence, so
if you can find any federal frequencies in the clear, that would be
another option for you.

How many channels/talkgroups can you stream though, before it just
gets too confusing as to what the listener is hearing? Is there any
way to discern between the various similar sounding audio streams
when a listener isn't actually looking at their scanner's displays?

(I'm on dial-up, so I've never really tried to listen to teamspeak or
any other streaming audio. Just not worth the hassle.)

I'll be at work by the time the game starts, so I won't be watching
tv or listening to a scanner or anything else. I'll just be glad when
the hype is over.

So the inter-service rivalry is so bad that the Blues have to park at a municipal airport instead of a much more secure military base? That makes no sense whatsoever, especially in this day and age. They may be "just" a demonstration team, but those are still military jets, regardless if they're unarmed or not.

CAP uses a M/A-COM OpenSky system. It is a 4-slot TDMA system,
therefore it's not capable of being scanned.

It looks like SVI has (or is about to) deliver a new Spartan/SVI rig to Glendale. Has anyone seen it? I would guess it is going to LT152, since their E-One is several years old.

It will be streaming with teamspeak and I an working on shoutcast possiblt for those who don't want to use teamspeak or streamwebtown. I have to find out again on how to change the amount of listeners again with webtown if i can get some help by walking me through step by step again on how to do this. With webtown is it better to push the feed or pull the feed?

Yesterday was a pretty good show for the folks at Deer Valley Airport and nearby businesses. A single Blue Angel F/A-18 Hornet appeared to be practicing an interesting takeoff technique most of the day. He was doing very low altitude takeoffs until he approached the end of the concrete where he changed the takeoff angle to 90 degrees straight up...

DV Airport restaurant staff said "they" would be here all week. All I saw was the single aircraft and not the entire Blue Angel team. Still a good demonstration of pilot skills and aircraft capability!

Mike,

That frequency is used by CBP (input) in the Douglas/Nogales area.
CBP has converted for the most part their frequencies to digital.
Even my close proximity to the CBP guys, I still have failed decode
results when listening to them.

Perhaps, you are getting some good radio propogation ?

If you're in the Phoenix area, maybe someone from CBP moved up
there for the Super Bowl fun.

Would you mind sharing those frequencies for some of us that live in the area,

Many Thanks

Also I heard the Blue Angels will be doing the fly by, roof going to be open?, any Angels freqs?

I already have Glendale PD freqs, same ones used for Coyotes and Cardinals games.

Do you have media freqs for helo's and fields units, rovers, truck to announcers, etc.

Thanks

Ron

Well Mike,

Just watched the 12 o'clock news and there was a piece on the CBP folks who are providing security inspections and x-rays for the Super Bowl, provided by the Nogales CBP unit.

Perhaps they're using it as a simplex freq, since there's no need to repeat it. The signal might just be too weak from where you are located.

I saw them do that at an air show at [the now decommisisoned] Pease Air Base
in Portsmouth NH.
One of the solos comes in low and slow, then increases the angle of attack
and adds thrust until it's moving at walking speed down the runway.
Very impressive.

Monitoring Times had good T'Bird show frequencies, which I also found in the
Win96 file for the Luke air show.

Did anyone get the tail number? If it's Blue 7, he's the advance team, he comes in to setup things at the airport for the rest of the team, usually a day or two early. He's also media relations and during a show, he's the announcer. When the team has a downed jet, 7 takes the place of the grounded plane.

Roof may not be open so Fly By may be a bust according to the local
weather reports for Sunday, they're calling for rain.

Media, check 450-451 and 455-456 you should hit on no less than 20
freqs, keep in mind that the FBR is going on at the same time, so
coordination is going to be critical on Sunday. As well I saw the MTV
production truck heading west on 10 this morning towards the stadium,
they will be setting up for their live stuff, in all it's going to be
a manic radio weekend!

Which is why there's a 'frequency coordination' team out there.
No transmitter gets in the stadium that hasn't been pre-approved.

There was an article in a ham magazine last fall about Karl Voss, a Phoenix
TV station engineer who's become the guru of interference protection at
Super Bowls.

Karl is the media frequency coordinator for Arizona, any media event in the region has to have it's freqs approved by him, if not the broadcasters just show up and setup on the local medias channels and really mess things up. It's not just 400mhz they worry about, it's all the microwave shots that the live trucks setup that he has to figure out as well.

Google him up and you should find the Game Day Coordination manual that he helped draft for the NFL, he's also the major contact at 12 when the HD Transmitter glitches.

From: serfphotog2000
Topic: 14434 Message: 14434

Is there any way to see what the fire departments get on the MDT terminal?

We used to be able to see this in SF about 10 years ago and had a ridiculous amount on info available to us.

I am a freelance news photog and would appreciate any help.

A couple of article links from a pro radio list about Karl and the
Super Bowl.

If you're referring to Phoenix Fire, then NO.
They are using cellular phone system modems to carry the data.

And I doubt that they would put their CAD information on the internet.
I know WE won't.

Maybe you should subscribe to one or more of the notification
services that cover Phoenix.
I'll let them contact you OFF LIST!

Many departments do offer live CAD, one of the pioneers in this was
Miami-Dade, aside from one of the largest departments in the country
they were very forward thinking in this page:

I'm not sure why DV makes sense. Luke is a military installation with security 10 better than any civilian airport I've ever been to. Luke is also closer to where they will actually do the flyover by staging out of Luke instead of DV. Oh well, I guess it is only money...

They must do that because they are confused as to what branch they are really in. To the best of my knowledge the USAF doesn't have any F-18's or Harriers (the USN has lots of them). Probably just asking directions to the nearest moving runway.... ;-)

I wouldn't think there would be a whole lot of "setting up" that needed to be done. They are only doing a flyover, not a regular show. About all they would need to do is find out exactly what time they needed to be overhead and show up on time. Their show season doesn't start until March (3rd I think).

John,

The rig you saw on the SVI website will be assigned to Ladder Tender 159 not 152. Don't look for a replacement for LT152 this year.
Its currently being lettered and outfitted for service & should be in service they say in about 2 months.

Also look for a similar but LARGER hazmat unit to replace the current Hazmat 157. They are also looking into 2 new pumpers.

Not exactly, true it's not a full or even partial show, but
everything is planned and rechecked several times prior to execution,
these guys don't do anything by "just showing up". They will do
that "fly over" 10 times before gameday to make sure timing is just
perfect. Program up their freqs in your scanners and start monitoring
Thursday - Sunday, 234.50(AM) was the freq they used for the Orange
Bowl a couple of weeks ago in Miami.

Why DV, to take off from Luke and fly over to the stadium makes sense
but this is our military, does anything they do make sense? As for
their season, March is correct, however the team is actually in El
Centro now for 2008 training, I caught them a few weeks ago when I
was driving over to Cali, the first show of the season in El Centro
is traditional and thanks the residents for letting them train there,
that show is March 8th.

For those of you that like to keep up with fire units in service around the valley, it goes without saying with all the events going on all around the Phoenix area and extra visitors we have, many fire depts have put extra units in service for the week.

I am pretty sure this is correct. Ed any corrections???

Some of them are (Phoenix only):
AR5, AR7, AR25, AR27
Rescue 908, 931

There might be more, but at the moment, I am not sure of them.

I haven't been to work this week (I have a cold after being in the cold rain for about 5-6 hours on Sunday). The AR units have nothing to do with the Super Bowl or any other events around the Valley.

I don't know about the two 900-series rescues. They were not in service last Friday when I was last at work. I just checked my work email and there is nothing there about the rescues you refer to.

F-15s, 16s, 18s, Harriers. They're gray. They're
wearing us military emblems. Typical callsigns
are things like "Combat five-one".

Whoever they belong to, they don't land at Luke.

One of my grandsons works at DV airport as a fuel truck driver and gofer for Atlantic Aviation. He says there is a single Blue Angel F-18 at DV the last few days.

It has been making about four flights per day that he describes as "celebrity flights". He says that all DV personel are being allowed to stop work and go to observation areas to view the take-offs. He describes the take-offs as causing the buildings to visibly shake!

I went out to the North fence (East end of Williams Rd., East of 19th Ave.) late Tuesday. I could see the blue tail rudders with the yellow trim parked/located at the far Northeast portion of the airport. Good spot to park with a scanner and binos.

Rob

14457. streaming live from Behind the scenes of the superbowl

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-01-31 15:15:54 UTC
From: thomas
Topic: 14457 Message: 14457

***** I have great news everyone , I am streaming behind the scenes from the super bowl with police and fire . I am not streaming the game only what is in and out of the stadium.This should get interesting as the game comes closer and closer.I already picking the pd up which are using talk groups set up just for this event. They are not using local channels.How can you listen on whats going on ? If you have team speak server go to this server and the server does work . www.incidentbroadcast.com:8768 . If you need help with team speak please yell because someone will help guild you through it is very simple. The server will hold up to 500 listeners. Now for some other good news. A friend has bought extra band-with for this event with his own money on icecast . This link will only be given out by request only . Please send me off line message to t_billman@... and i will forward your email to my friend Alec to give you the link.Please pass this info out to any forum or group you belong to this should turn out to be a lot of good listening.

From: jchrist24017
Topic: 14461 Message: 14461

Just on the news. The Tucson Air Guard F-16's will be flying cover for the 35 mile "no fly zone" for the Superbowl. That must be the combat type stuff you have been hearing.

Could someone send me a newer (than the ones in the file section) Win96 file for the Phoenix area.

Thanks,

Jim

They most certainly are using these local talk-groups and anyone
capable of monitoring PRWN would have no trouble listening to them.

As for who these guys are is really hard to determine, the references that I found for Cougar come back to an F15 squadron the 494th Fighter Squadron, however there are other references to Cougar on file. There are no hard references for Alley Cat that I was able to narrow it down to.

271.0 is a common Combat Air Patrol freq.

Hope this helps.

Sorry, should have added this before I sent the response...

Remember the emails about the ANG show of force scheduled for Friday,
that's probably what you heard.

On Game day, the callsign COUGAR should change to BLUTO.

I worked today and there are so many units in service that I couldn't begin to list them. There is essentially a whole fire department dedicated to just the Super Bowl, not to mention all the medic carts, bike teams, hot air balloon teams, and bathroom attendants. Actually, I'm kidding about some of them... You figure it out.

I'll be glad when this is over. With all the events going on in all parts of the Valley from Tempe, to Scottsdale, to Phoenix, Surprise, and, of course, Glendale, it's been a nightmare at work know who should respond on calls, because if you're not credentialed, you can't get into certain areas.

Sorry
I meant Banner Tow Planes are working from Buckeye ... Actually its only 1
plane ... The other 8 got grounded by the FAA.

I'm also picking up a lot of Super Bowl-related military traffic on
165.2375 MHz (listed as Customs Service in the Southwest Frequency
Directory).

I've also heard a couple of calls on 121.5 MHz (aircraft emergency
channel) of people violating the temporary flight restriction around the
stadium and being told to follow the fighters out of the area.

The "FLY OVER" by the Angles looked pre-recorded from a practice run
given that it looked like a nice bright sunshiny day, did they
actually fly and did anyone catch them on the radio, with the roof
closed not much of a Fly Over.

Yep, that's what I've heard.

I'm listening via the DXTUNER.com to a radio that someone is tuning in on 271 and 163.2375mhz. Very cool to hear the activity from my shop downtown Tucson as if I was there :)

Somebody is not going to have a good day today as he was forced to land :)

Who were those OMA aircraft?
Very low altitude and speed.
Fixed wing?

Craig,

Omaha are the US Customs and Border Protection Helicopters.
They were working with with the Superbowl JOC flying the skies during
the game. They routinely fly the southern border but were retasked
for civil air defense during the Superbowl. There were also several
F16's flying over the valley along with at least 2 refueling
tankers.

It sounds pretty crazy but then again they did have a number of
targets that were turned around when they got too close to restricted
airspace. I think they were mostly pilots that didn't check flight
restrictions before flying. Imagine their surprise when a fighter
and several blackhawks converged on them!

14493. Looking for BNSF Railfans along I40 to host an ATCS Monitor Site

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-02-10 04:04:22 UTC
From: Jon Adams
Topic: 14493 Message: 14493

ATCS Monitor is a neat little program that allows us to decode various data transmitted by the railroad that shows signal setting, switch setting, and track occupancy in near-real time. There's a user group dedicated to it here at Yahoo! Groups as well.

I'm hoping that there's one or more folks living up along I40, that have full-time internet access, who can have an outdoor 900MHz monitoring antenna, and would be willing to host one of our remote receiving sites. Likely spots include Needles, Kingman, Ashfork, Williams, Flagstaff, Winslow, Holbrook. If you like monitoring the BNSF and want to get more out of the experience, drop me a note off list.

Sincerely, Jon N7UV

Topic: 14502 Message: 14502

:)Hello,

I'm new here.
Suggestions on scanners(hand held?)
E-mail me on Yahoo at wbhedrick.

Over the years I had scanners. I do not chase. When the kids were growing up and back in a rural area we listened to the scanner for No School Days, or hear that the school bus would be late. You heard lots more but we used it that way. My MoM bought 9 scanners one year and gave one to her sister and all of us (7 grown kids) and one for themselves. I went to a gas station to fuel up my car and grab something to nibble on. We the gas station attendant only took enough for the food, and nothing for fuel. I never gave it a thought being I was the only one getting gasoline. I'm not blaming anyone but myself. I put the money in my pocket without looking and drove away without paying for the gas. Yup! There was an immediate phone call to the police. My folks happen to have their scanner on and they hear a license plate number and a name and made a call to my husband. I was no sooner home and made a mad dash back to town as my folks called the police to notify them of my "Dah Attack". To us the scanner came in handy for more than just a fire. In our rural town nothing like that happened to often. I live in Tempe and wonder what is happening sometimes and like to be able to listen again. At one time I had a url to listen to police happenings or something like that. I don't want that. So I am in the market for a scanner. I want one to carry with us on road trips and can use anywhere. I don't want to spend more than a few hundred. Well that's what I'm thinking... I need your input, 2 cents, suggestions on what to buy.

Thanks :)
Mrs. H

14510. Tucson Ham Radio Spring Picnic Update

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-02-25 04:47:38 UTC
From: N7JND
Topic: 14510 Message: 14510

*** Tucson Ham Radio Spring Picnic ***

Hi All,

Wow, the Tucson Ham Radio Spring Picnic is less than two weeks away. If you haven't made plans on attending this bi-annual Ham Radio Event, now is the time. Here are the details.....

When: Saturday March 8th from 12 Noon - 6pm
Where: Christopher Columbus Park on Silverbell Rd (see website for map)
Why: To promote the Ham Radio hobby and meet and greet the folks we talk to on the radio plus meet new friends.
Talk In: 146.520
Type: Potluck - Bring something to share. Check website for Potluck List.
Who: All Ham Radio Operators and there families plus anyone interested in Ham Radio.
Events: Food, Prizes, Demos, Group Photo at 2pm and more.
Website: www.tucsonhampicnic.com

Spend an afternoon in the park with friends and new friends. It's going to be a great time as always.

I would like to start getting a rough guess of how many will be joining us. This way i can plan on buying enough hot dogs.

If you plan on coming, please let us know by clicking the RSVP option at www.tucsonhampicnic.com

Please look the website over and let us know if you plan on bringing something to share so we can get it added to the Potluck list.

We look forward to seeing you at the 6th Annual Tucson Ham Radio Spring Picnic.

To help spread the word to as many as possible, whether or not you plan on attending, please do us a favor and forward this email to ALL your Ham Radio buddies.

73....Chris - N7JND - Tucson

25th Annual Greater Phoenix Arizona Police Collectors Show and Swap Meet

SATURDAY, MARCH 1st, 2008

8:00 AM TO 4:00 PM

5757 NORTH CENTRAL AV. PHOENIX

LOCATED IN THE YOUTH FELLOWSHIP CENTER OF THE NORTH PHOENIX BAPTIST CHURCH

A Police collectors show is an annual event where current, retired, reserve law enforcement, fireman and other hobbyists meet to buy, trade, sell and swap all kinds of public safety memorabilia.

These are the events where museum curators, historians and the general public safety enthusiast gather to share information and stories about historic moments and add to their collections.

ATTENDANCE is FREE and children are more than welcome to attend !

This is off topic, but I thought the Group might be interested. Lots of patches and badges for sale and trade.

I will be visiting Phoenix in a couple of weeks.
Does anyone have a .p97 file for the area police/fire/dps that they would be willing to share?
I know that I can find the frequencies on radioreference but setting them up at home and hoping that they will work when I get there can be an exercise in frustration.

Thanks
Mark

They sometimes use encryption and that's likely what you're hearing.
They aren't using P25.

Morning Jon & "helen_melon2001", I beg to differ with your statement Jon, sometime back in very late July, first week of August last year, the Border Patrol went P-25 all around here in southern AZ! All of the sites in Santa Cruz, Cochise, Graham, Pima, and from what I have been told Yuma county as well, went P-25 over the course of about 10 days!

Now, having said that, they do have the ability to go either way on the system (analog or P-25) and of course they still retain the encryption option's which they can deploy at any time of their choosing!

Just a follow-up, FWIW thing...

I hear the most activity on 169.45 MHz in the Phoenix area and that
frequency is not P25 but is occasionally encrypted.

Ah yes... the infamous 169.450.... "MANTIS", "ALLIANCE", "DHS NET
2"... you are correct it not P-25 as of this moment, it probably will be
in the near future though! And in reality, it is not a "Border Patrol"
frequency per say... it is a "FED" freq that has multiple uses throughout
the USA. I don't really know if any "single" agency can call it "theirs".

When I spoke of Border Patrol switching to P-25, I was referring
to the frequencies that we all know as "Border Patrol"... 163.625,
163.650, 163.675, 163.700, 163.725, 163.750, 163.775 ect ect ect...

14525. 6th Annual Tucson Ham Radio Spring Picnic

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-03-02 17:00:53 UTC
From: N7JND
Topic: 14525 Message: 14525

Thanks to Ham Radio & Scanner Yahoo Groups for allowing us to promote the Tucson Ham Radio Picnic. Like last year, these groups have given us confirmed RSVP's from as far away as Scottsdale Az, Yarnell Az and an a couple RVer's from CA.

WOW - It's almost here. The 6th Annual Tucson Ham Radio Spring Picnic is less than a week away.

I've already heard from most of you and we are looking forward to see you all at the picnic. Just in case you have not checked out the official website, please visit www.tucsonhampicnic.com . It's got all the information you need for this gathering.

The picnic will kick off at 12 Noon on March 8th at Christopher Columbus Park (again, see website for ALL details). The grill will be fired up shortly after that. From the looks of the Potluck list, there's going to be some great food there.

Group Photo: The group photo is scheduled to be taken at 2pm with giveaways just before or after the group photo. You do need to be present to receive a prize if your name is called.

All of the surrounding Ham Clubs have also been invited and each club has been promoting the picnic for us through the clubs website and their newsletters. We thank them all who have done this for us.

The Picnic is open to ALL Ham Radio Operators and their families. We also encourage those interested in Ham Radio to show up. What better way to get introduced to the hobby than to meet a great bunch of Hams at a picnic.

As always, whether or not you plan on attending this Ham Radio Event, we are asking you to help promote the picnic by sending this to ALL your local Ham buddies in your address book.

It's going to be a great day in the park. See ya there !!!!!

Hi everyone

Today I passed by a Homeland Security/ICE bus parked in downtown Phoenix. It looked like the kind of bus that would be used to transport detained immigrants. It seems like that would be some interesting traffic to listen to! Does anyone which freqs they would be using? RR lists a few for Customs and Border Patrol, but they seem to be mostly for areas outside Phoenix, and I'm not sure if CBP is the same as ICE.

Also, does anyone know if MCSO is using a particular set of freqs for their immigration enforcement?

Thanks

Sean

14530. Tucson Ham Radio Picnic - Photos Now Online

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-03-10 02:56:32 UTC
From: N7JND
Topic: 14530 Message: 14530

Hi All,

WOW, what can I say. The 6th Annual Tucson Ham Radio Spring Picnic was a blast.

The official count taken directly off the sign in sheets, was 80. That is absolutely fantastic.

The photos are now online at www.tucsonhampicnic.com . Just click on the Photo Gallery for the pictures.

One of our main highlights is the group photo that was taken at 2pm. Once in the Photo Gallery, you can click on the group photo and a new window will pop up with the full size photo. If you would like a copy of the full size group photo, simply right click on the full size photo and save it to your hard drive.

We want to thank everyone for coming out and making this event a total success. We had great food, great prizes, great weather and most of all, great people. Thank You All Very Much !!!!!

If you missed it, you missed a good one.

Please keep an eye on the website throughout the summer as we have already started making plans for the Fall October Picnic which will follow the Tucson Hamfest. It is my understanding that OPRC is starting to look at a date. Once they know the official Tucson Hamfest date, we will know our picnic date as it follows the hamfest. Updates will be posted to the website as they develop.

Once again, Thank You All for a great Tucson Ham Radio Event.

73....Chris - N7JND - Tucson

Has anyone yet figured out their frequencies. I brought a freq counter to a basketball game, but neither of the two officers assigned keyed up while I was in proximity.

Generally speaking, ICE are the plainclothes investigators from the pre-9/11 INS, and Customs Service. CBP are the uniformed agents/officers of the Border Patrol and Customs Service, as well as the former Federal Protective Service police officers.

http://www.cbp.gov/
http://www.ice.gov/index.htm

There are several frequencies in the goverment VHF-High range (162.6-174.0 MHz) that are used at various locations around the state, mostly in the southern parts.

However there are several around Phoenix, and in Pinal County you should be able to hear, and I have monitored at least one of the two Mt. Lemmon repeaters from my home here in Peoria without an outside antenna in the past. (I have not listened to them in probably a year+, however.)

I don't know if MCSO uses any specific talkgroups for their immigration enforcement missions the Posse sometimes undertake, going out into the desert to specifically search for illegals. I would assume that the patrol deputies would use their normal talkgroups as they come across any illegals in the course of their shift.

From: Doug
Topic: 14535 Message: 14535

On Tuesday, 3/11/08, I heard some good traffic on the MCSO TRS system
but it was on a talk group that I can't identify.

Units were trailing a suspect around 48th Street & Indian School and
they had ICE standing by when the arrest was made.

Since this took place in the City of Scottsdale, I don't know if it
was Scottsdale PD or MCSO.

The Talk Group was 43856. Couldn't find it on the RR DataBase.

Anyone have any idea who this was? Has any one else heard any
traffic on that talk group?

Sounds fine here on all my scanners, of course I am in Chandler. :)

Though I do know they are working on changing to a new system soo.

5xxK units are the MCSO Human Smuggling units - they work on a main channel, wherever they are unless it's a full blown more than 10 units, and then they'd probably take either a East or West TAC channel, or a special detail channel if they had posse with them and had people on analog radios.

Thanks, Dan. Just heard more traffic on 43824 on friday. Another
sting operation. You answered my question before I had a chance to
post it. Got both added now into the Scottsdale section of my scanner.

Thanks again for the update.

14542. [ArizonaScanner.com] P25 decoding (not trunked mode) question.

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-03-14 04:31:22 UTC
From: Dave McCormick
Topic: 13612 Message: 14542

I was unable to find if this has been covered prior, so soory for a repete if it has.

Does anyone know if the 9600 systems can be decoded by the older (796 type) P25 scanners if the scanner hits the conversation in non-trunked scanning, just not following the conversation as a trunking scanner would do? I know this might be a hard way to listen, but I was just wondering if it does work.

Thanks,
Dave Mc.

No its not at YRMC, that is Native 4 at YRMC-Prescott and Native 14 at YRMC-Prescott Valley and Angel 3 is on the other side of the mountain in Cottonwood so its not from around this area.

You'll have to let us know what part of Arizona you're in. If you're in
a major metropolitan area like Tucson or Phoenix you're going to be
missing out on a lot because trunking is in wide use now.

A good free source of frequency information is
http://www.radioreference.com.

14554. Poor reception on Mesa P25 system

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-03-20 02:28:16 UTC
From: misguidedmail
Topic: 14554 Message: 14554

Maybe someone on here can point me in the right direction. I currently own a RS2096, RS96, Uniden 396, Uniden 996 and a new GRE PSR500. The reception is horrible on the Mesa system. Almost all the conversations are broken up. The only way I can get acceptable reception is with a Yagi antenna up about 30 feet and pointed toward South Mountain. I can live with that in the house, but I would like to use the portable radios in my car. Mounting a Yagi and rotator on the roof of the Jeep just won't cut it. I can monitor MCSO with no problem with the standard antennas that came with the radios. It has to be something odd-ball with the Mesa system. No matter where I drive in the city, the reception is the same, about 10% readable. I am hoping someone else who monitors the Mesa system will have an answer. Thanks

Hopefuly the soon to be released Uniden downloadable upgrades
will be the cure. Otherwise, your reception woes are shared by
everyone else it seems.

I listen to the Gilbert Police but they are on the shared Mesa trunked
system. I have no problems receiving them with my 396 and 996.

You shouldn't have to point a yagi antenna to South Mountain. There are
towers all over the city. Pick up a copy of the Southwest Frequency
Directory. It has the location of the towers around town along with
their control channels. You should be programming the tower closest to
you.

14557. STA for PRWIN 700mhz Testing

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-03-20 20:56:32 UTC
From: flanousa
Topic: 14557 Message: 14557

Hello All,

A Special Temporary Authorization has been granted to the City of Phoenix, effective 7 Mar 08 until 3 Sep 08, to operate in the 700mhz frequency range. I pulled out some information from their application process.

Anybody hearing any testing going on???

Quotes from their application:

"Maricopa County has been noted as the largest growing County within the United States. Arizona's population and cities also continue to expand and grow, which require that Public Safety agencies within this state and region also expand communications infrastructure as quickly as possible to provide safe, reliable communications for all Public Safety officials."

" the City Of Phoenix requests Special Temporary Authority to operate a new 700 MHz Trunked Public Safety Radio System under the (SY) radio service. A permanent application approved by the Region 3 700 MHz RPC has been submitted

This new system has been constructed as part of the Phoenix Regional Wireless Network with COPS grant funds from the Department of Justice. Its purpose is to allow City of Tempe first responders to inter-operate as regional partners with The City of Phoenix. The completion deadline for the COPS grant funding portion of this project is August 31, 2008.

This will allow the City of Phoenix to begin testing of the system and expedite the transition of City of Tempe Public Safety personnel from their current unsupported legacy equipment to the new regional system."

Here are the frequencies and locations of the sites....

I live at Main and Dodson and I pick Mesa Pd and Fire up very well on the digital and I am using a pro-2096 with a car antenna and a radio shack external antenna sitting on my porch. They come in crystal clear. Now I also pick up the strange sounds at the end of conversations which is a pain some times but what i was told is the sounds are from their mdt's in the vehicles. I also stream my scanner online for others to hear.

Mesa uses one control channel for the whole city. From what I understand, this is a simulcast system, which transmits the same message from all 9 towers at the same time. I have no clue how to program the closest tower into my radio, maybe you can help me with that. I have never seen anything in the programming that lets me select a certain tower. Maybe I am missing something here. Thanks for the reply.

It is a simulcast system but you obviously need to program in your
closest tower for the best reception. So when you said that you were
pointing a yagi at South Mountain (which I don't even think is a tower
site for the system) then you're going to have problems. What is your
location so we can help you find your closest tower?

Well, first of all, if you’re pointing at South Mountain, what you’re going to get is an intellipeater that doesn’t always carry traffic.

I copy Mesa just fine from Fountain Hills, and from my 396 or my 996 when I’m in Mesa … from downtown Phoenix, its not so good, but ….

PRWN information
Scroll down to 'System Frequencies'
then look at 'Simulcast D: Mesa'

<http://www.radioreference.com/apps/db/?sid=2508>

There's also a LONG list of talkgroups.

Walter

Here is what I have done. I ran Win96 to see what control channels were active. Only one come's up as the active control channel, the rest are alternates. This is the way Radio Reference shows it too. To test this, I locked out the main control channel and tried listening for something on the alternate control channels. Nothing, not one transmission. So that tells me that the other control channels are only used if there is a problem with the main channel. I locked out the 867.8250 frequency. This being a simulcast system, I think they are transmitting the same message on the same frequency at the same time from all 9 towers. I can't pick a certain tower to monitor and none of the other control channels are active. If I have done something wrong here, let me know because I am at a loss as to what to do next. Thanks

I assume you meant to say PRO96COM (the monitoring software) instead
of Win96 (the programming software). ;)

Only one come's up as the active control channel, the

Thanks
>

You're close to understanding. Only one of the four frequencies you
see as the control channel or the alternates will be active at one
time. ALL 9 simulcast locations use the same active control channel
frequency. The alternates may carry voice if the site gets busy
enough. Watch PRO96COM for a while and you may see this. Same
thing applies with voice, ALL 9 locations send the same conversation
on the same frequency. Simulcast! So as far as picking which
simulcast tower to monitor, the control channel frequency won't help
you there.

The scanners are smart enough to deal with all four control channels
being programmed in. It will "hear" control channel data on one and
ignore the rest if programmed correctly. "IF" the control channel
has problems the scanner figures it's out of range or something and
checks the other control channel frequencies. Locking the

alternates out may cause a very quiet scanner when/if the system switches them.

So, where to point a yagi? Pick the site that seems to be closest with a good line of sight. That may eliminate the other sites from affecting your received control channel signal. If your scanner works better if you point well away from any of the sites then maybe your problem is too much signal overloading the scanner's receiver.

Good luck and remember, your mileage may vary!

I want to thank everyone who responded to my post. your advice is greatly appreciated. My biggest problem is monitoring the Mesa system while mobile. I have used some of the best antenna's that I could buy out there, and still the reception is hit and miss at best. It is the same poor reception quality with any of the digital scanners that I have tried. So, if someone out there has a cure for poor reception while mobile, I would like to know the cure. I can receive MCSO digital with no problem. Why is the Mesa system being so difficult? My guess is that the signal from 9 different towers is reaching the radio at a different time and causing the poor reception. So, if someone out there is receiving the Mesa system while mobile and has no problems with reception, please tell me your secret.....Thanks

This fire is being run by AZ State Land on:

State Land Ch2 151.415
Phoenix BLM 168.475
Air to Air 122.925
Air to Ground 154.280
NIFC Command 2 168.200

2 SEATS working this fire reloading out of Avondale Airport

It took off again today because it was burning in the river bottom in the Salt Cedars which burn really hot and they didnt get a handle on it thru the night even w/ a AZ Dept of Corrections handcrew and it layed down during the night then started to spread during the day again

> I have tried every type of antenna I could find to put on the Jeep.
I just picked up an Antenex model B8065cn, that was worthless. I have
even gone so far as having built a miniture 3 element Yagi. It works
great until you turn a corner and the reception goes in the garbage can
again. I did notice when I am mobile that the reception get's better
in certain parts of the city. Guess maybe I could find a spot with
good reception and buy a house in that neighborhood. Seem's like an
expensive way to get good radio reception tho. What are you using for
an antenna? Thanks

The freqs I posted in my last post are indeed in use, Ive been listening to the fire traffic on these as well as 151.400 from the Prescott area

Most of the on scene stuff is being run on mutual aid, only traffic on the state and blm is when dispatch needs to contact the IC,

Prescott Patrol 75 & Chino Valley Brush 62 are both assigned to this fire

14590. Re: Where is Gila River Fire-EMS?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-03-25 01:35:10 UTC
From: Joe
Topic: 14565 Message: 14590

I listened to Gila River Fire most of the day using South Mtn & Komotake. Fire is in the clear but PD is ENC. South uses directional antennas pointed probably south & SW? Being downtown south goes digital sometimes but improves in the NW valley. Komotake works well in the west & NW valley. Sacaton works well in Scottsdale & east valley.

Because Blue deck 12 was eliminated and Buckeye traffic is now on channel 9.
Channel 3 is now the primary tactical channel in the areas previously
assigned to channel 9.

David,
The two frequencies listed below are indeed the correct ones
used by the Maricopa Police Department.

Try connecting your scanner to an outside antenna or mobile antenna while scanning the 3 simulcast dispatch frequencies. The Antennex scanner antenna is the best mobile antenna I have found.

Its possible the Sacaton site has been rebanded? Believe all 800mhz is supposed to be finished in 2008.

We're all waiting on the feds to finish negotiating with Mexico before we
can reband.

14607. State Land and Flight Following

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-04-01 17:10:50 UTC
From: John
Topic: 14607 Message: 14607

Way back in 2005 there was a thread about the newly discovered (back then) use for 154.935 as a statewide flight following freq. It appears to be pretty active this season with more than "flight following" traffic (as you hear on the Fed freqs), including daily fire WX forecasts and air resources dispatch traffic.

Does anyone know what the State calls this channel officially and what its official use is?

Regards,
John
radioprescott

154.935 is just a state Tac freq that anyone can use, I have heard DPS and Game & Fish on it as well as State Land, & State Parks for their LEO Rangers (I have a friend who is a LEO at Lost Dutchman in Apache Junction and they use this freq to talk to DPS dispatch when running plates etc.)

Tribal utilities are on the vhf gov.Keep searching 162.0000 to 174.0000 at 12.5 kHz steps and you will find more of them and hydrology telemetry mixed in there too. The VHF gov. band is fun but requires a lot of patients

Sorry guys.

That *WAS* 1/2 of the old 'VHF State' channel.

It was a relic from when the Highway Patrol was on Hi-Band.

We gave it to State Land/Fire Division for flight following about 3 years
ago.
If they're using it for other purposes, well, they own it.

The other 1/2 is being used as the input to the 155.475 AIRS channel.

Nobody used it for running plates, etc, for well over 5 years prior.

From: Dave Bohmke
Topic: 14609 Message: 14614

It seems they like to use A-Mtn and Thompson Pk a lot for their op's here in Tempe. I have found the following to be active with SRP communications.
451.050-SRP Only
451.200-SRP Only (Very Active with dispatcher during the evening hours)
451.250-SRP Only
451.275-Shared with LTR trunked sys
451.425-Shared with LTR trunked sys
451.425-Shared with LTR trunked sys ("SOC to unit 824")
451.475-SRP Only
451.575-Shared with LTR trunked sys
452.375-Shared with LTR trunked sys
452.475-Shared with LTR trunked sys

This has been a lot of fun

Nothing in the fcc database about 171.750, the north
america band plan sez mostly federal operators on
162.025 to 174.00. I do not know where the feds
register their frequency usage intent.

You got that right, and any info that used to able to be obtained is reference at best. There are the old reliables that never change, but I rememeber monitoring DEA/JTF traffic 10-15 years ago in NYC, they use to pop-up anywhere, VHF/UHF, sharing with customs, batf, nysp, FBI, NYPD tactical's, I had 2 radios at any given time strictly for search.

Jeff, do you still have that Scanner Net on your machine Sat nights? I've been meaning to check in for a while, but always have a "doh" moment about 9pm :-)

Victor, the feds do register with the NTIA, but the databases are not public and haven't been since the early eighties. Heres about as close as you'll get for anything "official"

http://www.ntia.doc.gov/osmhome/redbook/redbook.html

One oddity out here in AZ, the fed bands especially the 167mhz, (with the dead giveaway 167.9 pl) seem to be pretty active on the weekends, sometimes even at night. Not the case back east except with a major bust.

Thanks Dave, right on with the tribal utilities, thats what it appears to be, but "who". now thats the fun part..

Thanks guys,

73 Steve K2AUX

Pima Salt River Indian Community, & Gila River both share a few of those. The Police were on the 453 band but Gila went P-25 trunked and Pima went voice inversion after a few scanners were discovered on the res they decided to start scrambling the main dispatch. A lot of gates and checks along the canals have monitoring devises in the 171 band you will pick up some tones and telemetry every now and then.

Topic: 14610 Message: 14625

The NTIA regulates the federal goverment radio frequency allocations, not the FCC. And the information isn't publicly available. What we know has been gleaned through the past couple decades of monitoring by hobbyists.

There are a good handful or two of civilian allocations throughout the 162-174 MHz band. Some media channels, and some state-level forestry conservation channels IIRC. It's been awhile since I've seen the allocation charts in the back of the former "Police Call" directories.

There are a number of sites that list the 2008 frequencies, just do a Google, if you come up on a site that wants money, skip it and go to the next, there are no less than 10 that should come up as free all over the web.

I will be posting media frequencies later this week once I get some time to get over there, typically the media sets up by Wednesday and they are hot from Thursday to the end of the race. Personally I keep all the media in a scan group and the drivers pairs in another, last year I heard some stuff come up on the drivers channels that the media had no idea of, and 20 laps later I found out about something on the media channels that wasn't heard on the drivers channels so you really almost have to listen to both.

SWFD 9th Edition has a reasonably up to date list and a map …

Add 6xxx for district 6, queen creek … 65x beats instead of 14x beats.

Remove 36x beats for El Mirage (now dispatched by Surprise)

Add 236 for Goodyear/Mobile

And a few off-the-wall codes have been added, but I think their meaning will be obvious when you hear them.

14638. RE: [ArizonaScanner.com] MCSO Callsigns and Beatmaps

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-04-09 16:01:57 UTC
From: Dan Danz
Topic: 14631 Message: 14638

I *KNOW* for sure that El Mirage is dispatched by Surprise PD.

MCSO digital would mean talk groups dispatched by MCSO. They are not on these talkgroups. I don't know whether or not they are still programmed in their radios, but they don't regularly appear on MCSO digital talk groups.

On the other hand, Surprise uses ANALOG talk groups on the same Maricopa County Radio Network.

Since El Mirage had digital radios when they were dispatched by MCSO, I would expect them to use their own, new, digital talk groups when dispatched by Surprise.

Incidentally, the term "dispatched by Surprise" means where the 9-1-1 operators and dispatchers are located and where calls for service are handled. Incidentally, on the PSAP/DOJ channel roll calls, I hear somebody answer the El Mirage roll call as "El Mirage-Surprise".

No, you probably won't hear El Mirage units being dispatched on the Surprise ANALOG talk groups, but I believe you will hear them on the El Mirage digital talk groups. I don't have them programmed in my scanner - but I think the TGs were posted in this group a while back.

Where in Southern Arizona are you interested in?
I live in the Nogales/Rio Rico area and have an
extensive list.

Now, Border Patrol runs encrypted (DES-XL) for the
most part as far as I know.

Pretty funny that Border patrol is encrypted. I highly doubt that 95% of the illegals and drug runners have 396T's down in Mexico. Even then, most of them don't speak/understand English lol.

14643. CPB Encryption

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-04-11 08:52:47 UTC
From: Joe
Topic: 14635 Message: 14643

I expected CBP to fully encrypt or atleast use more encryption then before. Some smugglers do counter surveillance on CBP agents looking for roads to enter on & test agents on roads. Yes, they use scanners & post on hill tops watching where agents travel. With the amount of money smugglers make they need to attempt to get ahead of the game to protect their interests.

14644. Listen to PFD online?

14645. Phoenix PD Reception Issues - Thoughts

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-04-11 16:02:04 UTC
From: phoenixscanner1
Topic: 14645 Message: 14645

Well I see people are still having their issues getting a full un-cut transmission from PPD with the P25 system. It would appear they use a complex mult-site system and that casues scanners to get confused and drop parts of transmissions. I am a long time listener of PPD (since 1991), and am very unhappy about the current situation.

I am considering the new PCR-600 for testing, to see if it does any better with this system. I read that it can discriminate between multiple sites simulcasting the same thing by the strength of the decode from a given site being stronger than another. Could this be the answer? This technology is supposed to mimic the software in Moto radios that does the same thing.

Any logic to this thinking? Anyone try one of these scanners on this system yet?

Thanks.

Fred, give a listen to the feed at http:\\stream.electropost.net:8000
\icp963.ogg It is best listened to with winamp or something else that
supports ogg vorbis compression. It is a stereo feed at 12KHz with
the left channel scanning Phoenix FD, Mesa FD, Rural Metro FD and the
East DPS Channel. The right chennel is locked on Phoenix FD Ch1 (Main
Dispatch).

The feed is up 24/7 and has been pretty reliable.

Just a note in case you're not on Uniden's mailing list for Scanner updates …

Spread the word ……

There is new version 2 firmware out today for the BCD396T and BCD996T ….

There's new procedures you have to go thru to get this update but believe me IT IS WORTH IT. You'll probably grumble and mumble while you go thru the new registration process and the generation of an electronic serial number for your radio so you can get the key that allows the download. But the instructions are pretty good, and when you get thru and fire up your radio, your ears will thank you.

Fantastic improvement in P25 decode. No more having to fiddle with tuning the P25 audio. In fact, any attempt at doing so is ignored, even though the controls are still there for software compatibility.

I haven't heard any underwater audio in the months I've been testing it .. it works great in Phoenix the Maricopa P16 and on the Mesa/Phoenix P25 systems. And the beeps on EDACS systems have been eliminated.

The 396 has another major improvement in the elimination of most of that annoying BRAAP at the beginning of transmissions on mixed analog/digital systems. (Since the 396 doesn't have the ability for you to specify that a talk group on a mixed system is digital or analog like the 996, the 396 has been changed to delay a bit before opening up the audio to see whether it can decode it as P25.) Yeah, yeah, I hear you … it might clip the beginning of a few analog transmissions when the scanner lands on a new talk group, but that to my weary ears is infinitely better than listening to the BRAAP.

To get started:

Go to http://uniden.com/my

Register yourself if you haven't done so already.

Be sure to give them a good e-mail address so you get notified of future updates

Register your radio if you haven't done so already ..

Then go to All My Scanners and follow along …

You MUST have the latest version of BC_VUP, the firmware loading software. And you must upgrade to the last version 1 level before you can get the ESN that lets you get version 2.

If you have multiple scanners, you'll have to get a key for each but you only have to get the firmware one time from the site one time for each kind of radio.

It shouldn't take you more than 30 minutes and you, too, will be enjoying your radio much more.

Please note that I don’t work for Uniden, and this is not a paid advertisement. I’m just, finally, a very happy user.

Try the new firmware released today for the BCD396T and BCD996T radios.

I don’t have a PCR-600 to compare, but others who have both kinds say the new firmware puts them on equal footing. YMMMV.

Subject: [ArizonaScanner.com] Phoenix PD Reception Issues - Thoughts

Well I see people are still having their issues getting a full un-cut transmission from PPD with the P25 system. It would appear they use a complex mult-site system and that casues scanners to get confused and drop parts of transmissions. I am a long time listener of PPD (since 1991), and am very unhappy about the current situation.

I am considering the new PCR-600 for testing, to see if it does any better with this system. I read that it can discriminate between multiple sites simulcasting the same thing by the strength of the decode from a given site being stronger than another. Could this be the answer? This technology is supposed to mimic the software in Moto radios that does the same thing.

Any logic to this thinking? Anyone try one of these scanners on this system yet?

Thanks.

I did the firmware update to my 396, and to start off, I have to say I'm a little disappointed.

For those of you that haven't updated, be aware that there are a lot of hoops to jump through. But, if you follow the directions, the upgrade should go without a hitch. Follow ALL the directions and don't get in a hurry. This isn't a 30 second upgrade.

Here is what I've observed so far after the upgrade. My location in the valley is around 43rd Avenue and Glendale Avenue, so that gives you an idea of what I'm trying to listen to.

Phoenix PD: Audio is slightly better, but the transmissions still break up. Decoding error rate pretty high. I'm mostly listening to system "A". System "E" on the west side is the same. My signal strength is at 5 bars at all times. I'm hoping that there my be some tweaks that can be done to improve the audio, but at this point, I really don't see an improvement.

Glendale PD: Didn't see much of a change. Their system has pretty much been easy to listen to.

Luke AFB: Much improvement. Even with no bars, I still hear everything clear as a bell.

Scottsdale PD & Tempe PD: Seem to hear a lot more "noise" as the signal over here is weak. It locks in on the talkgroup, but the noise especially on Tempe overwhelms the voice. It didn't do that before the upgrade. Moving the radio to a higher location helps.

MCSO: Appears to be an improvement in the sound qualitiy.

All other analog, non-trunked system seem to have improved on the quality. Seems to be less "raspy" This includes Phoenix Fire.

I'm going to be trying to do some tweaking on the Phoenix PD system and will post my findings. If anyone else has any suggestions, please post them.

Scottsdale PD is on the Maricopa County system.

If you're trying to get them off the Thompson Peak site, you might not have good reception where you are.

Try putting in the control channels for the White Tanks site (not sure if Scottsdale PD is carried on there permanently).

Or the downtown central courts building (I'm pretty sure it carries Scottsdale without requiring affiliation).

Tempe has always had weak audio for me - analog hiss has always been apparent. But I don't listen to them much, and have not tried with the new 396 V2 firmware.

You might be pushing it to try to get them in Glendale, though. Their transmitter sites are all in Tempe, I think.

You might try experimenting with FM/NFM settings

Strange about Phx PD though .. you just might have cell tower interference on some of their frequencies. Watch and see what voice frequency comes up when you're having trouble. Then stop scanning and go camp on that voice frequency and see what you hear. Try tuning to adjacent channels and see if maybe you have something desensing your receiver front end. You could also try truning on ATT and see if that helps.

My experience with Phx PD is that I have gone from 60% reliable decode to 98% by using 396 V2 firmware. The 996 is even better.

Has anyone else done the firmware update on the BCD396T in the Phoenix area? I did it yesterday and I notice a tremendous improvement on the Maricopa County system. However, there is no difference on the PRWN. I am still dissatisfied on the decode quality of the PRWN. I was anxiously awaiting this firmware to see if the decoding would get better, but now I am considering one of the new GRE scanners to do a comparison.

I fear that Uniden is not getting enough feedback from Phoenix users. This weekend, I plan to do some testing with all of the digital systems in the valley and compose a report with my thoughts on the new firmware for Phoenix area systems.

Can anyone else comment on PRWN reception with the new firmware?

After purchasing the latest GRE handheld, the PSR-500, I can say that my issues are pretty much gone with transmissions cutting out. This happened on the 96, the 2096, the 396, and the 996, have owned and used them all. This new radio has technology that moves beyond any previous scanner and the hobby is a real pleasure again. I have enjoyed the first few hours of use more than any other scanner I have owned. For the Phoenix area, you can't go wrong with this unit, and HRO where I purchased it programmed it quite well. Turn on and enjoy. Works better with digital systems than any previous unit, and has super sensitive reception for vhf/uhf stuff, along with good rejection. So for those of you have had issues with Phoenix PD cutting out, this is a huge leap forward, still not perfect but a good deal better. From what I understand this radio deals with simulcast sytems in a similar way to moto radios. Not the same high end method, but a decent method better than previous radios.

Also some issues with MCSO were resolved. The 396 had a problem on this system where it would hammer you a bit. This radio doesn't do that.

I have come to the conclusion that short of spending $4000.00 for a Motorola radio, we are stuck with bad mobile reception. There is a fix for a base rig, but for mobile, 75% of the conversations are broken up. I own both of Radio Shack's scanners, Uniden 396 and 996 and just purchased the PSR500 and 600. All have about the same sorry reception on the simulcast systems. Reception at home and work is about the same. I know of no tweaks or adjustment's to get decent mobile reception on any of these radio's. For $4000.00 you can get a portable radio that will link to a specific transmitting tower, but a $500.00 scanner picks up all 9 towers and has a hard time sorting the signals out, hence the chopped up conversations. If someone has an answer to the poor mobile reception, please share your secret.

I've heard the portable radios also have to listen to all the simulcast locations. They DON'T choose just one of the multiple simulcast towers in the way it seems you're suggesting. There might be a write-up somewhere that explains how they deal with the situation - seeings as how it isn't just Motorola radios being used on the system.

As for any answers or secrets to better reception, I don't have any. I have noticed that it seems to all be related to location after reading a lot of posts. If you're in a good spot, fantastic - if you're not, tough luck. Anyone considering putting together a map of good -vs- bad locations for the different simulcast sites? Of course the individual settings on different scanners may really muddy the waters but if one person has great reception and someone a quarter of a mile away doesn't it might be nice to know what scanner the first person is using and how it's set up.

I don't know if this will be of any help or not but PD doesn't seem to have the cutting out and dropped signals. However, they do use Motorola radios both as mobiles in their squad cars and as their handhelds. Those of us in Public Works DO have the same kind of problems as those being mentioned here, although not to the same extent as what I am reading here. Our radios are NOT Motorola models though. We use EF Johnson mobiles and Kenwood handhelds. Nobody seems to be all that cracked up to fix our problems with the system since we are pretty far down the food chain but I have long thought that there was something missing in the non-Motorola radios that is causing us to miss either parts of conversations or sometimes even whole conversations.

Maybe since Motorola had to license the protocol to the manufacturers to make the scanners and the other radios, they left something out so that decoding isn't quite as solid so that the city would have to upgrade all the radios to their models. Doubt anyone would ever be able to prove that but it wouldn't surprise me any.

14668. Tempe's new 700 Mhz System

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-04-14 15:21:34 UTC
From: Doug
Topic: 14668 Message: 14668

For those of you that want to get in on the testing of Tempe's new 700 Mhz System, I got a hit on a control channel. Haven't heard any traffic, yet. But one control channel is up and running.

The frequency I got a hit on is 774.4188

At Rural & Guadalupe, I got a good strong 5 bars.

My radio is a 396, and I couldn't at first figure out how to create a new system for 700 Mhz. Nothing in the menu's. So, I created a P25 system and then it accepted the 774.4188 frequency.

So far, only found the one control channel. Can't wait for the testing to start and see how the 396 handles 700 Mhz as compared to 800 Mhz.

Unfortunatly at my home in west Phoenix, I'm not picking up the new control channel. Guess my testing will have to be done at work on the graveyard shift.

Let's have some feedback as to what others are getting and what talk groups are being used. We need a database built up as quick as possible.

14669. Re: Mesa PD reception still the same after update

Very interesting. On this system I found that the PSR-500 seems to do better than the previous offerings from Uniden and RS, but agree the issue is still present to a degree. It is all about location,and there are not too many locations that work perfectly.

I can give you a spot to play with if you ever want to, and you will see that the theory of the radio being confused by multiple towers simulcasting the same frequencies at a slight time offset being the culprit, is correct.

If you know where adobe moutain is in North Phhoenix, get off on pinnacle peak road and park your car just west of the I-17 freeway on the side of the road. You will notice reception is flawless for the Phoenix system. Why is this? Because you have a mountain between you and every other site, except for the one on top of that mountain. I once talked to a site tech for the PRWN and he explained that each site broadcasts a certain number of milliseconds apart so scanners are just blown away by this.

As you correctly pointed out, an ultra-expensive moto 2 way is going to be able to only listen to the tower decoding best, and not the others. There is a moto trade name for that software / hardware. The new PSR scanners are supposed to have a generic version of this, but it obviously can't match the police radios. However I do feel it is the best yet.

As a side note, I guess we can all be thankful that the Maricopa County system and Glendale offer some fairly high quality / interesting listening. Both scan well.

Although the situation is sad, I look at it in this positive light.

Before the digital system, even with a tall tower for your scanner antenna, you only heard maybe a third of the car to tower transmissions, but all of the dispatchers words. You got to hear alot of cool c2c and detective stuff.

Now you hear 75% of the dispatchers words, and 75% of the unit transmitting (cut-outs). No tactical, no c2c. But on balance, you hear more now I would say than ever, overall, and can follow the cool things that happen on Adec talkgroups, as you wouldn't have been able to with the old system where hearing the mobile side was difficult often times, and almost impossible with a handheld scanner. And of course, with digital systems you might as well just use a handheld, since everything is repeater tx for the most part.

At Ray and Rural in Chandler I also get 5 bars. This is a temporary license to Phoenix (WQIL319) that is related to WPWS631, WPNW554, and WPWR965.

The system is PRWN 0534-0205 with a WACN of BEE08. It's frequencies are as follows:

for 771, 772, and 773 MHz:

.16875
.41875
.66875
.91875

for 774 MHz:

.16875
.41875

Mobile units are in the 801 MHz range.

Transmitter sites in Tempe are at:

1342 E University
Bell Butte (Broadway and I-10)
245 E Marigold (by water tank)
8201 S Hardy (a TPD sub-station)

and in Phoenix -

Mt. Suppoa (whatever that is)

Mt Suppoa is the highest point on the South Mountain complex.

We should stop calling this “Tempe’s New 700 Mhz System” – 0534 is definitely PRWN.

And site id 205 would make it the next one in line for the Simulcast A system.

http://www.radioreference.com/apps/db/?sid=2508

Have you identified the primary and secondary control channels yet?

If you're an avid listener to Flag PD (like me), and noticed silence the past few days, its because they moved to a new system. Here's the scoop.

TALKGROUPS:

3216 Main dispatch channel. (on the Flag PD system)
3248 INFO/records request channel.
3280 Tac/surveillance channel and
3312 event channel
3344 car to car chat
city services up in the 99XX talkgroups

ATOP MT ELDEN DEVILS HEAD FLAGSTAFF, AZ
The FCC database:
854.9625
856.7375 main control channel Sys ID of D214
857.7375
858.7375 voice channels
858.4875 voice channels
860.4375

Trunked License - WPWK889

Hi Dan.

Thanks for letting me know what Mt. Suppoa is.

Tempe did decide to join PRWN. While it may not be their system per se, most of these sites are clearly for Tempe's use.

I would think that Tempe would be on System C, not A as that is where Yuppitukee (300 district) is. It's also possible that this may be the beginning of a new system as well.

I don't know how to go about determining which control channel is primary vs. secondary. Do you have a way?

Also, Doug (see initial post) discovered the control channel that is currently active. Namely, 774.41875.

Regards,

Gaston

14675. Mesa PD reception still the same after update

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-04-15 03:34:11 UTC
From: misguidedmail
Topic: 14663 Message: 14675

The only way that I have found to get good reception and capture almost 100% of the Mesa PD conversations is with a Yagi pointed toward South Mountain. I use South Mountain as a direction from my house because it is in the direction of MCC which has a transmitter site. The Yagi works good, but it looks really odd mounted atop my Jeep. The multiple transmitting sites really raises problems with any of the Apco 25 radio's that I have used. The GRE PSR500 and 600 seem to handle the multiple sites best, but still miss about 50% of the calls in a mobile situation. Guess we will have to wait for someone to come up with a cure for what ails these receivers. Makes me wonder if the manufacturers are really aware of the problems with the simulcast systems, or maybe the cost to make them work on these systems is way out of line for a $500.00 radio.

14676. Pro-92 Files

Hi All,

Anyone have any Pro-92 files for Phoenix/Maricopa County?

I dusted off the scanner as I make a return to the hobbies of scanning and fire buffing.

Another question, anyone aware of any active, open, GMRS repeaters in the PHX area. The ones I find on the web pages are not active (I have a 40W mobile and should hit anything in the valley and...nothing). If you know of any, please respond off list with freqs and TPL/DPL tone info.

Thanks,

Joe

The information recently submitted on RR indicates that Tempe will be on "Simulcast D".

Since I am the AZ DB admin for RR, I am interested to know what the site number is, as well as, the primary and alternate control channels.

The easiest way to get this information is by using software like Unitrunker on a tapped scanner to get it from the control channel data stream.

Topic: 14645 Message: 14681

First, simulcasting means sending the identical information, on the identical frequency, from multiple sites.
Note the word 'identical'.
A radio has no idea which site it's actually receiving from, so how could it tell the difference?
ADOT and PRWN are simulcast systems.

What you are describing is 'multi-casting', where the same [but not necessarily identical] information is sent on 2 or more frequencies, from one or more sites.
In THIS type of system, a radio can tell which site it's listening to, and can make decisions based on the received signal level or bit-error-rate [BER], when to change sites.
That would work for Maricopa County or any other multi-site, non-simulcast system.
Definitely not PRWN.

Second. I can't find any reference to a PCR-600 anywhere on the web. Someone help with a link?

Walter

Honestly, it sounds like you've hit the nail on the head.

Too much signal, can be just as bad as not enough.

Those with the '5 bars' on PRWN, try turning on the attenuator.

The Motorola radios [and they can be had for about $2500] have a built in
attenuator that activates when the received signal level gets too high.

The information recently submitted on RR indicates that Tempe will be
on "Simulcast D".

Since I am the AZ DB admin for RR, I am interested to know what the
site number is, as well as, the primary and alternate control
channels.

The easiest way to get this information is by using software like
Unitrunker on a tapped scanner to get it from the control channel data
stream.

0534-0301, 0301 = zone 3 site 1 not zone 2 site 1 – I think you made a typo.

205 is not in the same zone as 0301, so 205 is not part of the D system and I wouldn't expect it to be simulcasting the D stuff. Besides, For 205 to be part of the D simulcast, it would have to use the same frequencies. It doesn't so it would be multi-cast/multi-zone, not simulcast.

But that's all moot right now ….becuase right now, 205 is not carrying any of the A or D talkgroups .. just tech chat is all I heard.

That's interesting that Simulcast C is zone 2. Because it definitely carries some of the same talkgroups as A, but it also carries some (Skyharbor, notably) that are not generally on A (but can be if a unit affiliates). So what it puts on its transmitters is definitely different than what's on the A simulcast transmitters (and they're on a different frequency).

You're right, my typo, should have read,
Simulcast D decodes as 0534-0301, 0301 = zone 3 site 1.
(Darn cut and paste errors!) The reason I included this at all was
to show that it doesn't appear to be related to Simulcast D.

The best Yagi that I have found is one made by Maxrad. The model number is MYA80612. It is a 12 element Yagi. If I use this antenna, I have no problems picking up the Mesa PD, the reception is almost 100%. Hope this helps...

Heard some land mobile stations with "Red Rock" call signs "Red Rock Two" and "Red Rock 222" last weekend, via repeater, not simplex.

From a Monitoring Times article, the CAP was supposed to switch frequencies after 2007, so is this still CAP, or another government or military user?

Those agencies that are covered by the NTIA were supposed to move to P25/narrowband by 2007.
Agencies covered by the military have delayed that. CAP is an Air Force function.

Arizona National Guard non-tactical net [Broadway Consumer/DEMA net] has moved to narrowband.
And changed frequencies. [No I can't divulge that information. Sorry]

Hi Folks!
This is my first post here, have the SWG and been a member for a
while, but here goes...

I use a TV antenna as a"scanner beam" They are pretty wide in freq
coverage, and appear to work very good. We live in a HOA so can put
up a TV antenna. We did the following;
Mounted the antenna vertically, Used a plastic mast to mount the
antenna to the rotor. Looks wierd, but works great! From our
location nr 51st and Bell, we hear Flag, Payson, Tuscon and all
between. The HOA dosen't bother us, they just think we don't know
who to follow instructions. There is nothing in the CC&Rs about how
the TV antenna is to be mounted!

If you are a homebrewer, this is a good solution...

Cheers!
Tom

14704. Have an Optoelectronics Scout?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-04-20 03:02:37 UTC
From: Robert Homuth
Topic: 14704 Message: 14704

I got to borrow one some years ago from a fellow ham. If I put a big antenna on it, it just snagged pagers in the 152/158/462.8 range.

I had better luck in the 460 MHz range, when I used a ham band 70cm rubber duck, and the Arrow 440-3 three-element hand held yagi helped weak UHF signals to trigger the Scout.

Do you currently own and use a Scout, and how does it work for you in picking up new frequencies? I'm considering getting one to use in combination with my other scanners.

Scouts work great but there are a few tricks to using them. Don't use metal antennas or rooftop antennas. The input amp in the Scout is very sensitive to static. It's easy to fry, I've done it. Stick to rubber ducks.

Also, the Scout reports the strongest signal it sees. That's why you only got pager transmitters when you hooked it up to a big antenna.

Opto sells ducks for different bands and a notch filter that helps get hits.

From: phoenixscanner1
Topic: 14645 Message: 14707

--- In ArizonaScanner@yahoogroups.com, "Walter Howard" Ok, while I do appreciate your response, I do understand the difference. Yes PRWN is a simulcast. In theory each set of transmissions should be identical, stated at the exact same time. However, what I have been told, is that the actual sync of these transmissions is not exact, and that the moto ht's they are using have a system of tracking on particular tower, based on decode quality. How this would happen is beyond me. But it would explain the strange cutting out scanner users get, while the moto radios do not do this (much).

Note that several people have had great success when pointing a yagi at their nearest tower. This would be the logical result if this theory is correct. I plan a test with a yagi, and if it works, I will consider one digital base scanner for phoenix pd monitoring ONLY.

That is a drastic step, but it is my favorite agency to monitor.

I typo'd the model number. I meant PSR-600, the base GRE scanner. I ended up getting the 500 though.

The old 2096 is perfect for just what I am talking about.

I may be all wet on this topic, but for now I believe my explanation is on the right track.

Where you are at determines the quality of reception without a doubt too. I have discovered several "sweet spots" like the northeast corner of peoria & 19th ave (try it some time). Flawless reception. Other places too. But most locations stink. I believe this is why not one person to my knowledge has live scanner webcasting for PPD, as several people once did.

14708. Phoenix and Mesa poor reception....How to fix it

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-04-21 03:54:51 UTC
From: misguidedmail
Topic: 14708 Message: 14708

I have screwed around with this problem for about 2 years and there is not one of the digital scanners out there that can decode the simulcast systems without the audio breaking up. Even the new GRE scanners have the same problem that the old Radio Shacks have. The only way to monitor these transmissions is with a Yagi pointed at a nearby tower. You might get lucky and be located in an area that is close to a simulcast tower and you will get good reception. For the rest of us not located near a tower, or located between more than one tower, the reception is going to be bad at best. I have put up a Yagi up about 30 feet and I can catch about 90% of the conversations. At work, I built a small 3 element Yagi that is about the size of my hand, and this works great because at work, I am situated about half way between 2 towers. I got the design from somewhere on the net. I took a QT cup and filled it with sand and poked some holes in the top to stick the elements into. The sand is only used as a weight to keep the cup from falling over. I do not think it is possible to expect a $500.00 radio with a stock antenna to pick up these transmissions with any clarity. If someone has a cure for this problem, please share with us.

14709. New ScanArizona live scanner feed website

Yahoo group: ArizonaScanner (2007 — 2012)

From: Jason McDowell
Topic: 14709 Message: 14709

Just FYI, Gordon has setup a ScanArizona website in his large network of Scanning websites that he hosts. So far there is 4 live feeds being streamed with 24 hour audio archive in 15 minute segments. The 4 feeds are listed below...

-Maricopa County Sheriff
-Mesa, Gilbert & Apache Junction Police, Fire
-Phoenix Regional FD Dispatch, Mesa Regional FD dispatch with Rural Metro FD and Air Evac

-Mayer Fire

The website is open for several more feeds to be added so if your willing to host one then contact Gordon using the contact link on the website. From what I hear, it's very easy to setup a feed with him.

These are what I've picked up so far since I heard about the testing last
week.
2634, 2602, 28821, 1589, 2607, 2620, 2621, 2603, 2637, 2601, 2624, 2622,
2619

I haven't checked today's log yet. I've found a whole bunch of new TGs for
Maricopa County that I obviously didn't have programmed in yet, so I've been
logging everything for the past few days to see what I'm missing.

What does your reference to "205" mean??

Ed

Nice! Talkgroup 28821? Thats an add one. That sounds like an MCSO system TG. You sure this was on this new Tempe system?

Have you heard any voice traffic at all? I haven't had a chance to listen much.

"205" is the system ID, SID:0534h-0205 (WACN:BEE08)

Already made the RadRef PRWN page too, http://www.radioreference.com/apps/db/?sid=2508

All of this confirms what I have been suspecting. Thanks for sharing your ideas (loved the cup of sand / desktop yagi).

My home sits right between two towers, just like your work situation. Sounds to me like I need to use the cheapest digital base (2096) and hook it up to a yagi and just make it a dedicated PPD scanner. That way I can have another doing the other stuff since that yagi/scanner combination means all that unit gets is that band from that direction.

So bascially the solution is simple (being a bit scarcastic), you just need a $500 scanner and about $200 worth of antenna & lmr cable, to monitor ONE AGENCY.

Well, nobody ever said the scanner hobby was cheap. I still remember the guilt (short lived) over buying my first Pro-2006 in 1991, for about $450 with tax. In those days, that was a lot more than it is now though.

I guess I will bite the bullet and start planning.

Thanks again.

I don't think a couple of megs on the receving end of the antenna will make much difference. It might be another story if you were using it for transmitting. If you can get it up over 20 feet or so, it should work fine. You can get the antenna from Talley Communications. If you are short on space to put an outside antenna up, here is a picture of a small Yagi I built that works great, compaired to the rubber duck.

From: phoenixscanner1
Topic: 14719 Message: 14719

What is going on with TG329? I keep hearing traffic dispatched for the area around 12500 west between mcdowell and thomas, or thereabouts.

It is listed as an "alternate" talk group. Has the City of Glendale reached an agreement to take care of this area?

You most likely heard undercover officers and or detective units.
This happens quite often. When not being used for event traffic
near the arena or stadium, TG 329 is a popular with these type
of units. This can occur throughout the Phx metropolitan area
for special units, but no, Glendale does not have an
agreement for service in this specific area.

Allow me to correct my earlier reply phoenixscanner1. That was based upon past experience with this TG. Out of curiosity I decided to monitor to see if anything has changed. Apparently things have. This is routine type dispatch traffic with most units having 'Bravo' call-sign designators. We may have allocated a channel to another agency? Locations seem to be in the Tolleson area. I'm hoping to have a more definitive answer by tomorrow. Nice catch! Thanks for the heads-up on this.

After a call was code 4 this morning, the dispatcher said "10-4,
chase will be clear of that traffic at 11:19"

The last time I heard that was years ago when Phoenix PD still had
chase north and chase south channels.

A clue?

It's possible they may be permanently patching with Phoenix so that they can
talk to their units
when an incident occurs on the border of each city.

As good a guess as any? Of course, that border, (so far) is only addressing areas to the southwest of our City, in the neighborhood of Tolleson. I'm really not getting the impression that this has anything to do with PRWN. There are no mentions of switching to '_ Deck _,' nor do we hear the same tones associated on the PRWN system. Glendale currently has the capability to patch with Phx units.

14734. Goodyear FD & PD in Mobile Area

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-04-25 23:01:55 UTC
From: John Timmons
Topic: 14734 Message: 14734

For quite a few months now, I have observed Goodyear Fire Department trucks fueling in the city of Maricopa and firefighters buying food at some supermarkets. I was aware that the City of Goodyear had annexed land as far south as Interstate 8 and all the way to the Pinal County line including the heretofore unincorporated area of Mobile.

Yesterday afternoon I drove to Mobile (13 miles west of my location in Maricopa) and discovered a fairly large City of Goodyear modular building that is the new home for both Goodyear Fire Station #187 and the Goodyear Police Department. Adjacent to the building is a 70-80' portable radio tower with several microwave (?) type antennas on it; there are, however, no traditional public safety type vertical or yagi antennas on the tower .

Does anyone know what frequencies the Goodyear Fire and Police Departments are using in this very remote area? This site is probably 35-40 miles from central Goodyear in the far West Valley.

There used to be a Fuddruckers on the other side of 48th street and
Cactus but it closed in November according to the sign on the door.
By the way, clicking on the map at the Incident Command Page web site
that also had that location listed showed the location on Highland.

Needless to say, didn't go to the meeting.

Goodyear has contracted with MCSO for law enforcement .. traffic is on the West talkgroups (main/car-to-car/tac), the beat is 236 .

Fire dispatch is thru Phoenix regional dispatch center .. same as all the others in the area. I don't know the specific TAC channel that they use.

Is there some reason that Freq of Nature is not getting updated, Most of the info is several years old, and there is no info on PRWN under phoenix? I know, I can look it up on RR, but I just what to know about freq of Nature, I use to use the info many years ago when I started this scanning hobby.

From: Dan Danz
Topic: 14734 Message: 14742

No .. that was probably a routine thing. That's not the Mobile area, which is the new 236 beat. That's all the contract is for - the area from Maricopa Road/99 Avenue north to the "old" city limits of Goodyear. That's what you asked about.

Dan Danz (WA5SKM)

That explains why I saw a GY and MCSO traffic stop at McDowell & the 303 last night. Thanks.

14743. Mesa Fire - new freq's or TG's?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-04-28 16:44:07 UTC
From: whyburp
Topic: 14743 Message: 14743

Last week when the plane crashed in the orange grove at McKellips/Greenfield, I turned the scanner to Channel 2 which Fire usually does their major incidents on. They were not on that channel and I never could find where they were located. I remember the dispatcher giving some other kind of channel, unlike the normal ones, but I don't remember what she called it. Did anyone happen to listen in on that crash site response and if so, where did you go to hear it? I have a BCD396T and don't see any new file downloads to update, but it's been awhile since I did that. Any info about this, or if you could point me to any new DB downloads, would be great.

And that would explain why I haven't seen any traffice on the Avondale
TG's on the MC system. Makes sense.

I had determined it had to be Avondale, I just couldn't figure out the
rest.

Thanks.

Hi, good to have you!

There are a lot of good people here.

List what agencies or systems you most want to hear and maybe we can give you a few tips.

To be honest, I can't imagine upgrading without going digital, which you really are going to need more and more. Most larger departments are digital already.

Base or handheld?

The pro96 and pro2096 are the best deals going. On sale from RS for 399, and they ebay four around 325. They work fine but are a bit heavy on intermod in my opinion.

They uniden 396 and 996 are top notch radios, with great features. Seletivity is awesome, but sensitivity isn't quite what the RS radios have. These radios amazingly are around 500 new OR USED. I was amazed to sell one on ebay for 500, what I paid for it new.

Many say if you live in a big city get the uniden, if you live in the country get the rs scanners. Probably good advice.

I personally have owned all four of the above and sold them for the new GRE PSR 500 & 600, and am very happy. While many will find the display and keypad (and lack of tuning knob) irritating and inferior to the Uniden radios, I personally don't care. I wan't maximum performance and the more testing I do, the more I find these are just top notch radios with tons of features, with great sensitivity and great selectivity. I feel they do the best at digital decoding, digital audio, and rejecting intermod. While many say they have bad intermod, I run the $30 RS ground plane antenna 40' up with lmr400, and have no intermod issues. This is one quiet scanner when it is supposed to be (between transmissions). Kind of reminds me of my first Pro-2006 back in 1991, and how it was so much superior to anything I owned before it. No honking, beeping, jack-hammering, or pager intermod.

I consider the 600 todays Pro-2006, and that is saying a lot. The PSR-500 is even better as a handheld than the 600 is as a base. Sensitivity is awesome in most bands, and good in VHF-HI, but not great, probably it's weakest spot. If you want to listen to aircraft in this band, get the 600 and put an outdoor antenna up, nuff said on that. Vhf-hi agency traffic is mostly gone now anyway. A good outdoor antenna will take care of things if you need to.

UHF Low is also just a bit better than average on the 600, but seems to work a bit better on the 500, respectable in either case. But to be fair my antenna is a quarter wave vhf antenna, and while it is supposed to resonate on uhf that isn't it's strong suit. A UHF or true multi-band antenna would do wonders I am sure.

On 800mhz these radios outperform all previous digital scanners, IMHO. Better reception, better sound. They even do better at tracking the awful Phoenix System, though nothing can scan this system 100%.

In truth though, the RS and Uniden radios are great units too, each with their own strengths, and a good argument could be made for buying these depending on your situation (RS - price, Uniden-aesthetics, awesome selectivity, big screen with lots of alpha spaces, tuning knob, etc.)

If you mostly care about non-trunked analog stuff, just pick up a Pro-2006 or BC9000XLT off ebay. These are two of the best old school scanners money can buy. I am putting a UBC9000XLT (unblocked euro version) up on ebay tomorrow, and it is a heck of a radio with a few scratches on top.

They assigned the traffic to Mesa Fire Channel 9. That channel is only on
the new digital system and is talkgroup 3072.

Here are the ICP pages from the event:

ICP: MesaFD ALERT-3 GREENFIELD & McKELLIPS Reported plane down on the S/E
side
of Mesa Falcon Field. TFC:Ch9 tg3072 [ICP963]

ICP-U/D: MesaFD ALERT-3 CMD advises corrected location is Greenfield & Ivy.
Single engine plane, fully involved with unknown souls onboard. TFC:Ch9
tg3072
[ICP963]

ICP-U/D: MesaFD ALERT-3 CMD advises 3 deceased inside the plane. TFC:Ch9
tg3072
[ICP963]

ICP-U/D: Mesa, Arizona ALERT-3 McKellips Rd & Ivy St near Mesa Falcon Field
Airport. CMD now advises this was a single engine LanceAir that crashed into
an
orange grove on takeoff. Plane was enroute to California. [ICP963]

14748. School Bus Frequencies

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-04-29 02:28:59 UTC
From: John Timmons
Topic: 13490 Message: 14748

As an educator and scanner enthusiast, I am asking once again for school bus frequencies for the following three districts. Please do not refer me to the SWFD which I have and is not correct. I need someone who actually monitors these frequencies to provide the corrrect frequency information.
Though most scanner enthusiasts undoubtedly consider school bus radio traffic as mundane and perhaps boring, there is some interesting traffic from time to time.

Maricopa Unified School District
Kyrene School District
Casa Grande Unified School District (District may still be contracted with Laidlaw)

Thanks in advance to anyone who may know the correct, actual frequencies used by these Districts.

John
Maricopa, AZ

I've heard these and did some basic research for the ID...

155.265 Gilbert
155.175 Gilbert
155.205 Gilbert
154.525 Location of Rural & Knox
173.325 Busses down in Pinal or Maricopa, Indian?

The only FCC license for Maricopa School District is for some 72 MHz freqs,
which are usually used for links.

For the Kyrene School District, they have licenses on 151.745 and 155.175.

Casa Crande has a license on 46.04

Laidlaw has an expired license on 937.7500 and 937.9875

In my area, school bus service is contracted out, therefore, the bus company is licensed and not the school district.

Hello John,

You are welcome to copy off my homework (my personal radio frequency logs).

http://freqofnature.net:8080/rf/index.php

From a quick search of my homework I found the following.

GILBERT USD - TRANSPORTATION
150.8150
150.8450
150.8600

KYRENE USD
151.7450
155.1750

LAIDLAW (ARIZONA)
452.8500
461.0750
937.9750
937.9875

I'm sure you know all too well as an educator, small school districts have very small budgets so don't overlook the common businesses frequencies.

http://www.freqofnature.com/mwiki/index.php?title=Business_Radio_Frequencies

It would much appreciated if you could return the favor by letting us know what you find.

Take care and don't forget to hand in your homework on time. Extra credit for PL tones,

Tracy

That frequency is actually a community repeater, owned by Randy Powers, and
is on Towers Mountain.

Walter.

Think you hit the proverbial nail on the head. Radio Reference is a great resource for radio
monitoring hobbyists, but they don't provide detailed local information.

I'm a recent migrant to Aridzona [sic] from California so my personal expertise and focus has been on my ethereal neighborhood in California, specifically the coastal areas of Ventura, Los Angeles, and Orange counties. The Southern California Frequency Directory was largely based on our radio scanner database and the information on the FON (Freq Of Nature) web site.

To answer your question, I'm a newbie to radio scanning in Arizona and have received very few updates for Arizona from our FON visitors. Think most of the information for Arizona came from posts to this forum, and I thank you all for that.

Think it would be cool to have regional resource for Arizona radio scanner information. Personally, I don't have the time these days to listen to my radio scanner, but I would certainly welcome a responsible champion to take over updating the Arizona information on the FON website.

Walter,

This one is used locally for Prescott schools only, the Towers
Repeater doesn't cover anywhere in Prescott.

Mike

14758. Update on School Bus Frequencies

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-05-04 03:14:12 UTC
From: John Timmons
Topic: 13490 Message: 14758

Thank you Steven, Howard, and Tracy for your input and frequencies you provided me regarding my query on school bus frequencies for the Maricopa, Kyrene and Casa Grande School Districts. I have not had much time to adequatelt monitor the frequencies for traffic, but in the limited time I have monitored, I have heard the following on the frequencies listed below.

155.1750: I definitely hear a moderate amount of school related communication s on this frequency, however, from my travels to and from work across northern Pinal County, the signals are weak and break badly.

461.075: I have heard no traffic on this repeater, however, when the coded identifier transmits, the repeater is full scale on my scanner. The repeater transmits a very brief, quick signal approximately every 60 seconds, the purpose of which I do not know.

937.9875: I have not hear Laidlow Bus Lines on this frequency, however, I did briefly hear some type of communications involving a large truck. This frequency also seems to have annoying data transmissions on it, as well.

I will continue to monitor all the frequencies you noted to provide adequate time to possibly hear any school bus communications. I am more than happy to share with you any discovered communications that I may hear. Thanks, again.

John
Maricopa, AZ

Here is the current feed list for www.ScanArizona.us with more feeds
planed in the near future.

* Arizona Highway Patrol (Phoenix metro area):
* Coconino and Kaibab National Forest wildfire communications:
* Flagstaff Police:
* Grand Canyon National Park Service:
* Maricopa County Sheriff:
* Mayer Fire Department:
* Mesa, Gilbert, and Apache Junction Police and Fire:
* Metro Phoenix Area Fire:
* Mohave County Sheriff and area fire departments:

Adding a feed is easy, check out the forums at www.ScanArizona.us
formore information on setting up a feed.

14760. P25 traffic on USFS A/G Freq

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-05-04 17:00:42 UTC
From: John
Topic: 14760 Message: 14760

Here's an intersting observation:

While in the mobile area of US60 and Gold Canyon last Thursday, I heard some comms on 171.575 in P25 clear (with 5 bars on the signal meter) regarding reporting a vehicle accident on surface streets in the east valley. Sounded like a repeater to me.

SWA Mob Guide has 171.575 listed as Fagstaff Air/Ground. Do they routinely share these freqs?

14761. Re: [ArizonaScanner.com] P25 traffic on USFS A/G Freq

Hi Victor,

Gregg and I shared an office at Northwest Fire. Gregg became a SK from the result of a massive heart attack. Although he had a very healthy heart, a traveling blood clot made its way to one of his coronary arteries and got lodged and totally blocked blood flow to the heart itself.

A great loss of a wonderful friend and co-worker. I'll never forget him.

14767. Coconino/Kaibab wildfire feed

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-05-08 08:42:03 UTC
From: Chad
Topic: 14767 Message: 14767

I have a 24/7 feed on www.scanarizona.us

Tonight the feed was down for approx 6 hours. During this time, I added approx 150 more frequencies that are commonly used in fighting wildfires in and around the Kaibab and Coconino Natl. Forests. Most of the new frequencies are Bureau or land Mgmt and Arizona land dept. along with "HOTSHOT" freqs. All USFS freqs are still included.

Chad

P.S- Anyone in or near the flagstaff area in these forums?

And that would explain why I haven't seen any traffice on the Avondale TG's on the MC system. Makes sense.

I had determined it had to be Avondale, I just couldn't figure out the rest.

Thanks.

I haven't heard Avondale today on Glendale's Ch 12, so, they may be back to normal on their own system. Avondale was using this channel for the past several weeks while their system was undergoing repairs. The 'unusual' on this channel would have been noticed with the addresses being given, because Glendale's southern boundary stops at Camelback Rd.

So I hear encryption on 2965 (was always c9). For two days I hear this. Then I realize that the new tgid for c9 is 2959 now.

Who knows if this is permanent, but I thought I would throw that out there for anyone interested, or if you are now missing some hot calls in the north valley.

I confess I don't know. But I never noticed encryption on 2965 before, so I am assuming the change is recent. I just haven't been doing a ton of listening to this system lately really. I have been busy learning all the ins and outs of using my new PSR-600 & 500, monitoring all sorts of different things, so maybe I just no realized it.

2965 is considered an encrypted TGID. However, it's very likely you were lucky enough to be monitoring when traffic was in the clear for whatever reason? Rare, but can and does happen from time to time. Just smile, enjoy and hope it lasts a while. By the way, 2959 is rotated with C6. You lucky guy, a 500 AND a 600. I imagine the 600 is just as great as the 500 right?

14774. PRWN Monitoring Tip

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-05-13 03:53:13 UTC
From: Gastón Mascareñas
Topic: 14774 Message: 14774

If you are having trouble monitoring PRWN, you may benefit by a trick I came up with that works for me.

Simulcast A and Simulcast C have some control channel frequencies that are very close to each other (867.9625 and 867.975). When both of these happen to be in use, I can listen to the stronger of the Simulcast Systems (Simulcast C in my location) but not the other. Enough of the 867.975 control channel bleeds over onto 867.9625 to cause my Uniden 396T (and my 996) to not be able to decode Simulcast A's control channel. This prevents me from listening to districts 500, 600, 700, and 900, which are predominantly on Simulcast A.

The trick is this: I programmed a control channel frequency for Simulcast A that is "detuned" by 6.25 KHz. I programmed 867.95625 as a control channel, which is 6.25 KHz to the left of 867.9625 and further away from 867.975. Of course, I also locked-out the correct control channel frequency of 867.9625.

The 396 picks-up the "detuned" signal-up weaker than the correct frequency, but free of Simulcast C's control channel. The result is that the radio properly reads the control channel signal and picks up all Simulcast A conversations just fine. Now, I can monitor both systems very well.

This trick did not work on the 996. Apparently, it has better selectivity or worse sensitivity than the 396 or both.

If you are in an area that gets both control channels mixed like this (probably anywhere near South Mountain), you may be able to use this trick. Depending on where you live, it may even work for a Uniden 996.

As I write this posting, Simulcast A is using a different control channel (867.2125), so you'll have to wait until it switches back to 867.9625 before you can try the trick.

Good luck,

Gastón

14776. Phoenix Simulcast A - Yagi Installed / Cut-outs GONE! Yes!

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-05-16 15:16:05 UTC
From: phoenixscanner1
Topic: 14776 Message: 14776

After a few years of frustration TRYING to monitor the PRWN TRS, with its half dozen simulcast sites, I had resigned myself to simply scanning other things for the most part. It was that bad. When I picked up my latest PSR scanners, they did a better with the system at first, or so it seemed, but after a few days I realized it wasn't as much better as I had thought, and at times (especially during times of high activity - weekend nights), half of every transmission was cutting out and choppy, still. So back to scanning other things for the most part. At times on Friday night it seemed, I was only hearing a quarter of everything, with most all transmissions cutting out BADLY. I heard about 25% of what was said on "bad days". Ugly. And enough to turn my ears elsewhere.

After years of speculation of what effect a yagi would have on the situation I purchased a wilson 14db yagi with a center frequency of 855 off ebay for $60.

Ok first does it work? A resounding YES!! YES!!! Monitoring the phoenix system is now as pleasurable as any other p25 system in the valley!

Now like any other p25 system I know, there is the occasional garbled word or "digital" sounding voice, but those things are far and few between overall. So reception is not absolutely perfect, but I don't consider any p25 system around here to be totally perfect, they all digitize the voice occasionaly.

But up until now the Phoenix system was FAR FAR FAR worse than any other system around, and now it is the same.

So I am going to call this a RESOUNDING 100% SUCCESS!! I went from hearing 25%, to around 95% or better, which is as good as any other p25 system I listen to.

For about $100 total you too can actually monitor the PRWN for the first time. This of course unless you are one of those lucky few who live in a sweet spot already where reception is good.

But this is for all of you like myself who are SICK OF THE CUTTING OUT and want to listen normally again!

Now you need to understand a few things if you want to do this, so read on. It takes some thinking and planning as to HOW TO AIM YOUR YAGI. This is the key to making the most out of this method. Read on.

After first aiming it directly at the nearest transmitter with good but not perfect results, I determined something.

Unlike the typical use of a yagi, where you would point it directly at the antenna you are trying to receive from, this is a different situation.

I didn't need more gain from the transmitter on the mountain four miles away, I needed ATTENUATION of the other nearby towers, first and foremost.

Two others were fairly close, and the other ones were much farther, so I decided to focus on eliminating the signals from the closer two.

After looking at the radiation / reception pattern for the antenna, and seeing that the maximum attenuation occured at 90 degrees, I positioned it so that the 90 degree point was right in between the two nearby offending towers. A compromise if you will. Neither got the absolute maximum attenuation, but both got equally strong attenuation. By my calculation, with the 20db attenuation of my scanner, plus loss from the cable / connectors, this gave a total of about 61db attenuation to these two towers.

Now it may seem strange, but the antenna was not pointed directly at the tower I wanted, but 6 degrees off that mark, so that the other two WOULD GET MAXIMUM ATTENUATION. I am still getting 12db of boost for the site I want (didn't even need that really), but MORE IMPORTANTLY, I am ATTENUATING the offending towers TO THE MAXIMUM DEGREE, which is the REAL GOAL, not getting gain from the tower I am trying to listen to.

Trying to aim the yagi directly at the tower you want, very well MAY NOT give the best result, depending on your situation if you try this method. HOW you aim is important. Plot out all nearby towers and look at what their attenuation / gain with be with the antenna pointed various ways, with the end goal of attenuating the offenders as much as possible, while still pointed enough towards what you want TO NOT ATTENUATE IT.

I wanted to share this with everyone, and for the skeptics, I am planning a live feed of Phoenix PD in the near future. As far as I know it will be the first successful feed of this agency since the switch to p25 simulcast. My personal belief is that nobody has tried for the reasons listed above. It wasn't listenable, and worth the effort, until now.

The least I can do is share good listening with those who can't for whatever reason install a yagi and dedicate a scanner.

I probably just caught one of those moments where something was not encrypted, it happens I agree. I hadn't looked at system a much for a while, since I programmed it with a two year old frequency guide, so I may just never have changed the tgid when they changed it long ago.

I haven't monitored the system for a while because the transmissions were cutting out so badly, with three transmitters near me at similar distaces. See my other post for my yagi solution.

The 600 is better if only because the audio is awesome compared to the 500, and because it is more practical for me to have on a rooftop antenna. I am in North Phoenix and things like PCSO, Tolleson, Goodyear, etc., come in crystal clear with a rooftop, where as they are a little rough at times on the 500, though I will say it picks up better than the 96 or 396 by a bit from my house.

Now for something really crazy, I am contemplating which scanner to buy for my dedicated PRWN system a scanner, and while I saw a 2096 go for 340 on ebay yesterday (missed it!), I am considering just getting another 600 because I hear the 2096 may have issues with rebanding in the future. I want one base just for the yagi / system a (planning a live feed), and another for everything else.

Interesting. You know I would expect the PRWN to reband also. But doing a bit of research the other day I read that it won't changed for whatever reasons. I also found a list showing what agencies are expected to change, and the only local trs that was listed was Maricopa County.

Here is the link:

http://wiki.radioreference.com/index.php/Rebanding

Maybe the answer for portable users is a hat with a yagi on top. Just kidding.

Does anyone here ever hear anything on border patrol frequencies in the clear? I never have since the switch to p25.

I find it crazy that a certain federal agency I won't name here does drug surveillance in the clear on conventional analog uhf frequencies, yet the border patrol, who is out to catch poor migrant workers with a jug of water to their name, uses encrypted apco 25 radios.

How many of these folks crossing the desert are going to have a $500 digital scanner, and the knowhow to program it, and monitor coded digital radio traffic? Few I am sure. Maybe a few coyotes but I doubt it.

Yet a dope dealer can buy a $30 scanner off ebay that will monitor the federal guys doing the drug surveillance operations. And he has all the time in the world to listen in.

Just a bit ironic to me.

Those illegal aliens pay $10,000 to invade our United States of America. A lot of them are terrorists and criminals. They can afford anything they feel they want. Most of them are not "poor migrant workers". They have caught some of them with receivers for local traffic, drug traffic and yes BP traffic.

Not really ironic. Maybe, just a case of not knowing what the U.S. Border Patrol really does. Illegal immigration is just a small part of their job, yet it receives the most press coverage. For example, the K-9's are not for sniffing out illegal's.

Interesting that you ask, I was Down in PHX Fri and Sat and I heard 163.775 (florence) 168.975 (lemmon)and 165.2375 (white tanks) in clear P25 both days.

Lots of the activity was on the Florence channel in non encrypted P25.

I hear 165.2375 from my house here in Prescott in clear P25 at times.

These are just normal frequencies (no trunking).

Thanks for relaying the frequencies. I didn't have some of them and they
are quite busy. I didn't think I could get Mt. Lemmon because I'm right
in the shadow of the San Tan mountain range so I thought that would
block the signal but it still comes through. There is some encrypted
traffic there but a lot of it is not.

Good points. I understand they have an important job and that some very bad characters can try to slip through. You are also correct that the people smuggling drugs could afford the equipment.

I guess I am just surprised more that the other guys don't encrypt.

14793. APS TG surveillance?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-05-20 00:24:46 UTC
From: phoenixscanner1
Topic: 14793 Message: 14793

Well today I heard surveillance activities on TG 1008 of the APS TRS. CC was 860.3375, same as what the regular service / emergency crew TG's were using. Some sort of narcotics sting in central / east central Phoenix. Yes, I am sure of what I was hearing, quite detailed.

My question is, who in the world would be using this radio system for that? PPD? No way, they have a crazy amount of TG's with encryption. MCSO, Scottsdale, Glendale, no, I know them pretty well. East Valley? Maybe, I am not that familiar with those guys.

I was thinking DPS or Feds. Neither have anything in that band. But who knows?

I always wondered if law enforcement did stuff like this, now I know. But this is the first time I have seen it happen this way.

It pays to keep an ear on everything.

I agree this pays to keep an ear on everything.

This TG and 2 other TG's associated with these guys have already been ID'd. It's the Arizona Fraudulent ID Task Force. Listen for the phrase "AFIT", pronounced "ahfeet - with a long a, not the ahh that you do for the doctor". They'll usually say it when they refer to the channel that they are on, i.e. AFIT-1.

They've been heard in the Phoenix and Tucson areas. They'll be quite active for a short while, then disappear for months.

1008 AFIT Statewide
1040 AFIT Statewide
1072 AFIT Statewide

Wher do you guys get this stuff?

DEM has a net/talkgroup for EOC-EOC communications.

DPS has no ambitions to any part of the APS trunker.

Trust me, they WILL have to reband, unless the FCC abandons the whole idea [not very likely].
They are completely NPSPAC frequencies which will be moving down 15 MHz.

The rebanding for border areas HAS been delayed while the Department of State renegotiates the 800MHz frequency allocations with Mexico. Canada was much quicker to come to an agreement.

You guys are hearing emergency managment talkgroups.

TG 1168 is another EOC/emergency management talkgroup which is also
used for weekly radio checks to all AZ. counties.

14800. Re: [ArizonaScanner.com] APS TG surveillance?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-05-22 08:48:09 UTC
From: flanousa
Topic: 14793 Message: 14800

I can say that the following TG's are used unequivocally by:

AZ DEMA TG's:
1168 - Channel 1
1200 - Channel 2
1232 - Probably Channel 3

AFIT TG's:
976
1008 - F2
1040 - F1
1072

I have personally heard, followed, and recorded the conversations on numerous occassions for the above entities. It's really easy to ID the DEMA stuff, because they say they are on the DEMA network and ID by each counties EOC location and mobile callsigns.

I've identified the AFIT TG's because they say AFIT when they ID their channel, and because when they finally make the bust, it's in the newspaper and on TV about what they did. The dates and locations have always corresponded to the activity reported in the news. In fact, on one occasion I drove down to one of the Dollar store parking lots where they were buying the fake ID's, and picked up the CI's bug mike. As an FYI, down here in the Tucson area, we call this pulling a "Tyrone" when travelling to the event.

I also use the software, Unitrunker, which easily follows and ID's each channel associated with these entities, making it real easy to ID, even if they don't speak who they are.

You can find the various repeater frequencies across the state at:

http://www.radioreference.com/apps/db/?sid=2350

It's listed as Arizona Public Service.

Then, input the talkgroups listed.

Topic: 14793 Message: 14804

Just a note, even though these TG's are used by those entities, it
does not mean that you will be able to hear it on your specific
repeater, even when they are active.

The AFIT guys and gals, for example, will only be heard on the
repeaters in the area that they are working.

The AZ DEMA EOC's can be heard every Wednesday morning at 10am. It's
just a quick comm check and they're gone just as fast. It should be
heard in all counties, however, haven't been able to verify this.

I attempted to generate interest on this back in 2006. See my thread
http://groups.yahoo.com/group/ArizonaScanner/message/12420

I can hear the Control frequency 860.3375 here in Mesa but I'm a
little confused on my BCD396T on which type of system to select,
Motorola UHF type 2 or Motorola 800 MHz Type 2 standard or Motorola
800 MHz type 2 splinter
. Thanks

Henry

Hi can anyone point me in the right direction to find this program.
I've looked last night for a few hours and again tonight with no result.
All I find are questions on its use and how "they" have just installed
it. Thanks
Henry

Henry,

I don't own a Uniden, but I can tell you it should not be a
splinter system in Mesa. You will encounter the splinter systems
down here in Tucson and as you get closer to the Mexican border.

I would plug in your Motorola 800 MHz Type 2 standard.

Henry,

As it was already pointed out, the software is called Unitrunker.
The most recent version is this one -
http://www.unitrunker.com/download/UniTrunker-0.1.0.57.msi

The program is free. The author has been hinting that a more windows
looking version of the program will be coming out in the near future.
I really enjoy using this program, as I have discovered a lot of hidden
jewels....

Morning all.... it looks like you folks in the Great State of Maricopa will be getting a visit this coming Tuesday afternoon. And by the looks of things, you'll have roughly 24 hours to listen in (probably in the Fed band) and hopefully report what you hear/find! Good luck and please be sure and pass along what you discover!

If it's about McCain coming in to stay at his ranch in Sedona for Memorial day then they will be using standard DPS escorts and When he arrives in Sedona they will be using Local PD and SO channels.

McCain doesn't use federal SS frequencies for his security.

When he was in Prescott a few months ago there were no Federal frequencies being used at all, only DPS district 12 and Prescott Police channels.

Been a while since I've listened to a visit, but if the big man is in
town, plug these in and you should hear something on a few of them,
but also DES(digital encryption)as well.

From my experience the VHF 162-174 are the most busy.

Arizona public safety radio informationAccording to MT Fed Files
http://mt-fedfiles.blogspot.com/2008/05/mccain-campaign-update.html

As I posted a couple of weeks ago, Sen. John McCain has recently been confirmed as having Secret Service protection as he campaigns across the US. He had previously dismissed the security detail from the Secret Service, but apparently reconsidered as the conventions draw closer.

Now, I have received word of Sen. McCain's Secret Service call sign. It is reported as "PHOENIX", which is appropriate in several ways. This now joins the list of other candidate call signs listed below.

Hillary Clinton - EVERGREEN
Bill Clinton - EAGLE

John McCain - PHOENIX

Barack Obama - RENEGADE
Michelle Obama - RENAISSANCE

Thanks to all the blog readers and listeners in the field for this information!

In addition to the Secret Service and local law enforcement frequencies you might enjoy monitoring the combat air patrol frequencies.

271.0000 BLUE 15 (Talking with tankers and NORAD)
138.2250 VICTOR 12 (AM mode) (Air to air chit chat conversations)
121.5000 Guard VHF (Used to contact pilots intruding into restrict air space)
148.1250 NORAD Nationwide (AM mode)

My apologies, the "media" has done nothing but cover that McCain would be in the state at his Sedona home courting VP's, I was not aware that Bushy was in town as well.

LifeNet 02 is at Marana - Avra Valley Airport

I believe AE 40 is a helicopter at the Pinto Mine near Globe.

Hey Michael, I know I talked to you about AE40, you told me the mine, the AE crew I talked to told me its a fixed at Globe airport, so I emailed the company but havent heard anything back yet

and LN2 the EMSystem screen shows LN2 status UNAVAILABLE right now at Tucson/Marana last updated 25 May 1614 , its also showing LN10 unavailable at Safford 25 May 2157

do you have access to the EMSystem screen, it shows all the helos in state and hospitals that are open diversion etc.

Email me off list I can give you it, Im not going to post it here.

Thanks
Mike

I am new to the group so I hope this will help me out with a few questions. I had heard the Phoenix fire is getting new Pierce trucks and 8 new Battalion Chiefs. Has anyone else heard about this or am I the first??
Thanks guys

14834. A decent indoor antenna for scanner?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-05-30 06:12:15 UTC
From: Jerry
Topic: 14834 Message: 14834

A great site here.
To paraphrase a common radio talk show greeting...
"Long time reader, first time poster"

Can anyone recommend a reliable indoor antenna for my RS Pro-96 receiver?

The stock antenna is good for short distance, but frankly, I want some distance.
I live in an apartment complex that frowns on attachments to their buildings, so that leaves a yagi out of the equation.

Any suggestions?

14835. RE: [ArizonaScanner.com] A decent indoor antenna for scanner?

From: Bert
Topic: 14834 Message: 14835

I am no expert, but I can suggest to you what I use.

I use the RS Pro-97 with Radio Shacks Magnet Mount antenna #20-032. I use it at home as well as in the car.

I have good results with it and a noticeable improvement over the rubber duck. There may be a better option but this works well for me and also can go mobile as it is designed to do.

Good Luck

Bert

I too am an avid reader and first time poster.

From: ArizonaScanner@yahoogroups.com [mailto:ArizonaScanner@yahoogroups.com] On Behalf Of Jerry

Subject: [ArizonaScanner.com] A decent indoor antenna for scanner?

A great site here.
To paraphrase a common radio talk show greeting...
"Long time reader, first time poster"

Can anyone recommend a reliable indoor antenna for my RS Pro-96 receiver?

The stock antenna is good for short distance, but frankly, I want some distance.
I live in an apartment complex that frowns on attachments to their buildings, so that leaves a yagi out of the equation.

Any suggestions?

You must be the first. As far as I know, no formal contact has been signed nor have they gone to bid on the next pumpers. They did at the beginning of the year test 1 Pierce Quantum PUC at Engines 8 & 9. They always are buying new trucks for the BC's. Currently they are using Ford pickups.

14841. greetings from SoCal

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-06-01 22:42:22 UTC
From: Dale
Topic: 14841 Message: 14841

I'll be in your state in about three weeks visiting the Grand Canyon with driving trips ranging
between Williams and Sedona.

I have a Pro95 scanner and use Don Starr's Win95 to interface, and another group I belong to
here on Yahoo has quite a few files for many areas of the country. I got one there for Phoenix, Tempe, etc.

I was wondering if anyone can answer a couple quesions. First of all, I see you have p96 files
which I assume are for a similar software but they do not work with my software and set up. Anyone know where I can find some files for the northern part of AZ?

Second, if I were to monitor the freqs I have for Phoenix area from up in the Flagstaff area,
would I have any success?

Finally, I like to mnitor amateur radio as well as public safety. Any of you do that and any
recommendations on active repeaters that can be picked up in the northern part of the state?

Many thanks in advance and 73

A lot of stuff in the Phoenix area is digital now and that's why you see
the P96 files. They go to the Pro-96.

I seriously doubt that you'd hear any Phoenix traffic from Flagstaff.
It's just too far away (more than 100 miles).

thanks to all for your help. I found a good number of repeaters in Northern AZ with a little more digging and your info. I am also now seeing that there's a lot of APCO and digital going on there. The APCO/Skynet etc craze hasn't made its way to oCal yet so we aren't all set up for that.

But I have a scanner and Yaeseu and there's plenty of other things to monitor in Williams and Flagstaff, I see now. So see and hear from you all soon!

For most of central Arizona you will indeed need
a digital trunking scanner. Uniden or Radio Shack
has models. Pro- 96 etc.

No. For Phoenix you will one of the following.

Mobile
BCD996T
Pro-2096
Psr 600

Handheld
BCD396T
Pro-96
Psr-500

All new are around $500.00

Radio shack has the 96 and 2096 on sale for $399.00 once in awhile.

14852. Which "Thunderbird" on 462.9625?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-06-05 20:37:30 UTC
From: Robert Homuth
Topic: 14852 Message: 14852

Location heard: 29th Avenue and Greenway
Stations heard: "Base", "Thunderbird One/Ten/Twenty"

Mentions video cams, and "Green room".

I heard activity around noon, 6/3/2008 with an S9 signal with my VX-6R
and short rubber duck.

Frequency: 462.9625 MHz, repeater, and unknown PL, since they weren't
on long enough for my radio to capture it. Did not hear low tone and
warble from a DPL system, either.

Thunderbird College, or hospital, or someone else?

Date: 2008-06-06 03:27:18 UTC
From: N7JND
Topic: 14854 Message: 14854

Hi All,

This might be off topic for the group. but I figure it's a good place to ask. I'm trying to ID a radio tower that is located on top of a small mountain to the east of the Florence Highway north of Oracle Junction. It can be seen from here up to about Freeman road off to the east. A buddy of mine & I used to drive to this tower up Willow Springs Road just outside of the town of Oracle. It's a rather large free standing tower that can be seen from the highway on top of the mountain range. Anybody know anything about this site and who using the tower?

If you can get the latitude and longitude you can search for the tower at the FCC's website.

be careful with the data from antennasearch, it's lists anything that
is considered a "tower" that includes a high voltage power line tower
over 50', when the search is complete, press the View Antenna Results
not View Tower Results, you'll quickly see what I mean.

Ed Cifelli wrote:
> Might also want to look at www.antennasearch.com.

Is there a way to query that site using something
other than street address? If not, it seems
pretty useless. Towers on remote mountain tops
might have a legal street address. But it's unlikely
that a curious person (us) would know or be easily
able to find out.

Hello all in the great southwest! (Wish I was there)

I was on scan AZ tonight and noticed two fire dispatch channels (I think). Have Metro Phoenix divided the dispatch into zones? It sounded that way. I have not been in the valley in 7 years and it's been 24 since I worked there so I imagine there have been some changes.

Any help understanding what's new is appreciated!

Thanks,

Rich, Phoenix Metro is divided into a few Fire dispatch centers. There's the Phoenix Regional Dispatch on 154.190 and a cazillion tac channels. Then the Mesa Regional Dispatch on 154.340 which takes care of Mesa, Gilbert and AJ. Then you have Rural/Metro dispatch, Salt River Dispatch, Gila River dispatch, Wittmann Dispatch and I think thats about it lol.

Jason

From: Lou
Topic: 14867 Message: 14867

Hello About to give up finding these talk groups. Using PSR 600 and have the freqs in the Trunked area for Fisher Wireless. I pick up several of their transmissions here in Flagstaff. I have a wildcard in there and it is hitting several talkgrups i.e. 0.01.100

Tried searching net ... Fisher ... etc. Hit a couple of 0.0.XXX but they were on systems on the east coast.

Anyone know of or have info on these talk groups for the Fisher Wireless 452.8250 in the Flagstaff area?

Thanks

Do you have Google Earth?
Find the lat and lon from the pics.
Searches for registered antenna structures can be done for a radius around that.
And you might be able to find the name for that hill.

Let us know.

Morning,

The City of Tucson as well as most of the surrounding communities(Oro Valley, South Tucson except Marana) is mostly still analog, meaning you don't need a digital scanner. The county is a different matter all together, and there are people lurkng around here that can explain the county better then I.

You can get frequency information at Radioreference.com or maybe someone around here has a file. I DO have a file that covers the area but it's for the Uniden 396 and 996 in a dedicated format. I don't know what kind of radio you're using or programming software.

If you happen to be using Butel's software for these radios, write me and I'll send you the file.

You can do a 'GeoSearch' on a radius.

If the original poster could even give a set of rough lat/lon's, some of us check our resources.

From: freqofnature_tracy
Topic: 14854 Message: 14880

The problem the original poster has is not searching for a know lat/long but finding the lat/long of a known location.

Google Earth displays the lat/long at your pointer. Google Maps also has a plug-in that does the same. Use that lat/long information in the FCC antenna database query to find entities that have a tower there.

14884. IDing a radio tower

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-06-14 17:56:46 UTC
From: Craig 'Lumpy' Lemke
Topic: 14854 Message: 14884

David French, N7FAN wrote:

> Not maps.Google.com but Google Earth.
> It's a totally separate program.

I'm not sure how much clearer I can ask the
question. I know how to find the lat/lon coords.
That's not my question.

re: www.antennasearch.com.

> > Could you point me to where, on that site,
> > that you're able to search by anything
> > other than street address?

OK? I'm asking about the www.antennasearch.com
site. How do you query by anything but street address?

I don't find anyplace to query by lat/lon.

14885. Re: IDing a radio tower

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-06-15 18:07:39 UTC
From: karl_gross
Topic: 14854 Message: 14885

I'm bored with this thread.

It took me 3 minutes to determine that this tower is owned by American Towers Inc, FCC Registration Number 1008965, it is 100.6 feet tall, and was built in 1962.

To do this, I snagged the Lat/Long from Google Earth (has that been flogged enough?)

I then Googled "FCC Tower Database" which took me to http://wireless2.fcc.gov/UlsApp/AsrSearch/asrRegistrationSearch.jsp for the tower search. The top right side let me punch in the lat long and a radius.

Bingo, there it was.

I clicked on the registration number and found more than I really care about.

Next.

14886. TV channel question, post digital transition

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-06-19 12:07:49 UTC
From: John H. Guetherman
Topic: 14886 Message: 14886

This may be off-topic. If so, I apologize. I've seen various websites talking about the reason for the transition to digital tv broadcasts, but I haven't found any specific info relating to what tv stations here in Arizona will be doing.

I'd like to know what the plans are for any TV stations currently using channels 52-69 in Arizona, come Feb 17th, 2009? CW61 is the main one I'm curious about, but there are a few other channels that I know are there but can barely recieve here in Peoria with the rabbit ears antenna I have. Channels 53 (Spanish language), 58 (Home shopping), 59 (Primer Impacto), and possibly 63 (religious audio).

I know that channel 61 is CW6 on cable, but I don't have, and don't plan on getting anytime soon, cable or satellite tv.

(After the digital transition, channels 60, 61, 68, and 69 will be reallocated to public safety communications. (The new 700 band.) Qualcomm plans to use channel 55 for its MediaFLO service, whatever that is. If I recall corretly, there used to be a station on channel 55. I think it got moved to channel 27 in Prescott, with a digital translator on channel 7 here in the Phoenix area.)

Secondly, I'm also curious if channels 3 and 10 have any plans for extra channels. (3.2, 10.2, etc.) Channels 5, 8, 12, 15, 45, and 51 all have at least 1 extra channel, (8 and 51 having 3 extras) although 45.2 simply carries the same programming but in full-screen format instead of letter box as on 45.1. Channel 7 had a 7.2 but no longer seems to have it.

There is the additional point that channels 2-6 have to deal with the fact that they are mandated to cut power by up to 80%. A digital station on those channels can only transmit with a maximum power of 20KW, whereas an analog station has been allowed up to 100KW. Will any stations on channels 2-6 in Arizona relocate to the UHF band, where they can transmit with higher power?

I think that's it. Thanks.

John
Peoria

The channel assignments, both analog and final DTV, are here;
<http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-07-138A2.pdf>

Have you gotten a converter box yet?
Just like the PRWN radio system, you'll either get almost perfect reception,
or nothing.

MediaFlo is mobile video. You'll be able to watch full motion TV on your
phone.

As to your other questions, unless there happens to be someone that actually
works at those stations here on the list, your best bet is to contact each
station

14891. Analog 800 MHz that's not trunked?

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-06-21 22:08:19 UTC
From: Robert Homuth
Topic: 14891 Message: 14891

My Yaesu VX-6R hand held radio receives 800 MHz, but not trunked, and only analog.

I found Goodyear PD, Tolleson PD, the Sun City Sheriff Posse, and Paradise Valley PD use analog, non-trunked radio.

What other agencies, public safety, utilities, businesses and others use non-trunked analog 800 MHz?

And, why do they use 800 MHz, instead of 153/453/460 MHz repeaters? Does 800 MHz offer better propagation through buildings? Or, at the time of the allocations, weren't there any 153/453/460 MHz frequencies left over?

Thank you,
Robert

Scottsdale PD also uses 800 Analog.

the reason they do this is the trunking aspect of this.
more users on fewer freq.'s

14893. Rebanding

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-06-22 01:06:24 UTC
From: Jon M. Hanson
Topic: 9888 Message: 14893

I have been getting choppy voice decoding on some frequencies on the Simulcast D system. I'm only a couple of miles from the tower and I have a discone antenna in the attic. It wasn't always like this. Not long ago every frequency came in crystal clear. Turning on the attenuator for the system seems to help a little but it's still choppy and unreadable on selected frequencies. The Maricopa County system on Thompson Peak is crystal clear on any frequency.

That reminded me that we should be in the process of rebanding. Sure enough Arizona is a part of "Wave 4," which is supposed to be complete in nine days (the end of the second quarter). I'm sure like every government project that it is behind schedule. Does anyone know the status of rebanding for Arizona? I'm hoping that when this site moves to it's new frequencies (and it will be moving 15 MHz down according to http://www.800ta.org) that my reception problems will be eliminated.

Date: 2008-06-24 05:22:33 UTC
From: Joe Badura
Topic: 14891 Message: 14901

Hi Robert,

They may have had an issue getting 153/453/460 frequencies, or considerations about propagation in urban areas. However, I'm guessing the main reason is for interoperability. These agencies do not have enough traffic to justify a trunked system, but they can purchase conventional 800mhz repeaters about the same cost of a 153/453/460 repeater. The agencies may then have purchase trunked radios for supervisors and have them programmed with surrounding trunked systems for interoperability. These agencies can also program conventional mutual aid frequencies that are in almost every 800mhz public safety radio in the valley.

Cheers,

Joe

No.
For quite a while, there were NO public safety frequencies available in
Maricopa County in the lower bands.
It was 800 or nothing.

14913. Re: [ArizonaScanner.com] TV channel question, post digital transition

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-06-26 03:01:54 UTC
From: John H. Guetherman
Topic: 14886 Message: 14913

I do have 1 digital-capable tv in the living room. I've got 2 analog-only tv's that I'll need converter boxes for, or replace with digital-capable tv's. I've also got a couple of other unused analog-only tv's that may or may not work, that I'll probably just recycle or try to sell to a tv repair shop or something.

Anyway, I decided to go through all the channels on the digital side. I found something interesting. All the major Phoenix-area VHF-band channels can be found in the UHF band. I also found that 3 of the UHF channels that I watch (15, 45, 61) can also be found elsewhere in the UHF band.

For example, KTVK-TV3, which has both an analog signal and a digital signal on channel 3, can also be found on digital channel 24. The tv will automatically switch back to digital channel 3.1 when I enter digital channel 24.1 on the remote. KUTP-TV45 can also be found on digital channel 26. The tv will automatically switch back to 45.1 or 45.2 when I enter digital channel 26.1 or 26.2 respectively on the remote.

All of the channels line up like this:
3 = 24
5 = 17
8 = 29
10 = 31
12 = 36
15 = 56
45 = 26
51 = 51 (no difference)
61 = 49 (I now have digital channel 61 programmed in this way. I assume that after 2-17-09, when channel 61 is reallocated, the tv will then show the CW to be on digital channel 49.)

I don't know if any of the other channels will relocate come 2-17-09.

I don't watch them, but channel 21 can be found on digital channel 20, and channel 33 can be found on digital channel 34. Both have 4-5 sub-channels available. (20.1, 20.2, 20.3, etc.)

If anyone has a digital-capable tv with rabbit ears or a roof-top antenna, you can go through the channels on the digital side and see this for yourself. (If you're outside the Phoenix area, try it too and see what you find.)

14916. Frequency request

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-06-26 01:12:27 UTC
From: echo85206
Topic: 14916 Message: 14916

Greetings:

New to the area. Moved here in March but not new to monitoring. I have owned scanners that monitor trunking channels. My current scanner (Bearcat) does not handle formal trunking frequencies. I am interested in knowing the "must have" frequencies (Police/Fire/Ambulance)....I have found some online but don't know for sure what I am missing. Also, interested in media or helicopter news/police frequencies.

Any assistance is appreciated.

Nick Franklin

I'm at work so I don't have the exact freqs but heres the names of em and a site:

Best bet is Phoenix Fire 1-12 and the BlueDecks 1,2,12

Mesa Fire VHF 1-3

Any RuralMetro

DPS Metro Frequencies

Helicopter Air to Air (media/pd helos chat a lot on it)

KPHO/CBS5 ENG - this one is pretty chatty, other news use nextels or LTR trunked systems

www.freqofnature.com <http://www.freqofnature.com/> has a good directory for AZ

From: Michael Hamann
Topic: 14916 Message: 14920

That was some fantastic input, Thomas, however I disagree. A directory is a fantastic resource! Why should we limit him to frequencies we suggest? Maybe he wants to explore a little bit more of the spectrum in Phoenix? Plus, it's kinda hard for BP to give him frequencies when he says, "I'm at work so I don't have the exact freqs..."

But what the heck, the weeks almost over, right? Here's to the weekend!

Keep in mind that around here, units are dispatched on the "Dispatch" channel and assigned tactical channels, roughly based on the location of the incident.

Phoenix Fire:

Channel 1 (Dispatch) 154.190
Channel 2 (East Phoenix) 154.250
Channel 3 (West Phoenx) 154.070
Channel 4 (Mutual Aid) 154.280
Channel 5 (Northeast Phoenix) 153.830
Channel 6 (Northwest Phoenix) 154.310
Channel 7 (Tempe) 154.145
Channel 8 (South Phoenix) 153.770
Channel 9 (West Phoenix) 155.670
Channel 10 (Far North Phoenix) 151.370
Channel 11 (Scottsdale) 154.025
Channel 12 (HAZMAT) 155.775
"Blue Deck 1" (Chandler) 154.430
"Blue Deck 2" (Chandler) 155.955
"Blue Deck 12" (Buckeye) 154.085

Mesa Fire:

Channel 1 (Dispatch) 154.340
Channel 2 (Major Incidents) 154.235
Channel 3 (Minor Incidents) 153.950

Rural / Metro Fire Department:

Channel 1 (Dispatch) 154.370
Channel 5 (East County) 154.400
Channel 9 (West County) 155.385

AirEvac Helicopters:

Dispatch - 155.325

DPS Metro:

West Highways - 460.300
Central Highways - 460.325
East Highways - 460.200

Helicopter Air to Air: 123.025

KPHO/CBS5: 450.75

Welcome to the valley, Nick! If you get a trunking scanner, I'd highly recommend one with digital capabilities. That will allow you to listen to more of the valley police departments.

If you need anything else, feel free to contact us.

Best regards,

Michael Hamann

Subject: Re: [ArizonaScanner.com] Frequency request

That was some fantastic input, Thomas, however I disagree. A directory is a fantastic resource! Why should we limit him to frequencies we suggest? Maybe he wants to explore a little bit more of the spectrum in Phoenix? Plus, it's kinda hard for BP to give him frequencies when he says, "I'm at work so I don't have the exact freqs..."

But what the heck, the weeks almost over, right? Here's to the weekend!

Keep in mind that around here, units are dispatched on the "Dispatch" channel and assigned tactical channels, roughly based on the location of the incident.

Phoenix Fire:

Channel 1 (Dispatch) 154.190
Channel 2 (East Phoenix) 154.250
Channel 3 (West Phoenx) 154.070
Channel 4 (Mutual Aid) 154.280
Channel 5 (Northeast Phoenix) 153.830
Channel 6 (Northwest Phoenix) 154.310
Channel 7 (Tempe) 154.145
Channel 8 (South Phoenix) 153.770
Channel 9 (West Phoenix) 155.670
Channel 10 (Far North Phoenix) 151.370
Channel 11 (Scottsdale) 154.025
Channel 12 (HAZMAT) 155.775
"Blue Deck 1" (Chandler) 154.430
"Blue Deck 2" (Chandler) 155.955
"Blue Deck 12" (Buckeye) 154.085

Mesa Fire:

Channel 1 (Dispatch) 154.340
Channel 2 (Major Incidents) 154.235
Channel 3 (Minor Incidents) 153.950

Rural / Metro Fire Department:

Channel 1 (Dispatch) 154.370
Channel 5 (East County) 154.400
Channel 9 (West County) 155.385

AirEvac Helicopters:

Dispatch - 155.325

DPS Metro:

West Highways - 460.300
Central Highways - 460.325
East Highways - 460.200

Helicopter Air to Air: 123.025

KPHO/CBS5: 450.75

Welcome to the valley, Nick! If you get a trunking scanner, I'd highly recommend one with digital capabilities. That will allow you to listen to more of the valley police departments.

If you need anything else, feel free to contact us.

Best regards,

Michael Hamann

Geez. Is everyone asleep? When was the last time anyone heard a call go out on a blue deck channel? Been at least a moth or two, hasn't it???? We don't use the blue deck channels anymore.

CHANGES ARE COMING! Maybe even this year.

14930. Eathan fire

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-06-28 02:44:33 UTC
From: thomas
Topic: 14930 Message: 14930

this fire must be ripping the sky here in mesa is so brown. Hardly any radio traffic on this fire.

14932. Ethan Fire Audio Feed on ScanArizona.us

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-06-28 19:47:26 UTC
From: wupatki_az
Topic: 14932 Message: 14932

I've set the scanner for my Right Channel audio to some of the Air/Air freqs being used on the Ethan Fire for anyone that wants to monitor online. Air Attack, Helos, and Tankers are all chattering today.

Feed is at www.scanarizona.us
Feed Name: "Northern Maricopa and Southern Yavapai County Sheriff and Fire"

The left channel still has MCSO/YCSO but the right channel is currently set for the Ethan Fire Freqs of 126.325 (Air Attack), 170.000, 170.500, 171.500.

If anyone has any additional channels they would like put in the loop please message me direct.

Enjoy,

Jeff

14933. Selling my BCD996T

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-06-28 21:48:47 UTC
From: Dale
Topic: 14933 Message: 14933

I have decided to sell my BCD996T scanner and thought I would let this list know before I put it on Ebay. Its in perfect condition and I still have the original box for it. It probably has less than 10 hours on it. I have to admitt I never really learned how to use it properly. So its just been sitting. In fact it still has the protective plastic coating on the display.

Anyway, I want $400 for it. It will go on ebay in the next day or two. I'm located in Gilbert. If your interested, just shoot an email to "fly5465 at hotmail dot com".

Thanks Dale

I had the A.J P.D. locked out for the longest time. Recently I
unlocked the channels to listen to them and found the VHF channels to
be empty of
them. Does anyone know where they went??

14936. Re: Apache Junction P.D.

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-06-29 18:32:11 UTC
From: Jason McDowell
Topic: 14935 Message: 14936

They went to digital voice. You'll need a digital scanner like a BCD996T, BCD396T, Pro-2096 or one of those PSR ones. Average price is about $430. If you have one already, then go to radioreference.com and look in the PRWN in the database under the AZ section.

There's more changes coming? Sheesh, it seems like its changed enough LOL. I used to have the tac channel assignments memorized by area, now I have no clue what channel a call will be on lol. Well, except for channel 8 which seems like it remained for south calls and now Chandler.

14938. Re: [ArizonaScanner.com] Frequency request/PFD Tac Channels

Yahoo group: ArizonaScanner (2007 — 2012)
Date: 2008-06-29 19:20:08 UTC
From: Jason McDowell
Topic: 14916 Message: 14938

Nevermind, they just assigned a natural gas leak in the south end on
Chelsea Dr to channel 2, i'm all confused on tac assignments now. lol

Jason
